

Systematic Review - Supplementary Materials

The impact of shift work on blood pressure and hypertension: a systematic review and meta-analysis

Sara Gamboa Madeira*, Carina Fernandes, Teresa Paiva, Carlos Santos Moreira and Daniel Caldeira

Supplementary Materials: The following are available online at www.mdpi.com/xxx/s1.

Figure S1: Funnel plots and P-value (for Egger test) for each outcome.

Table S1: Search strategy.

Table S2: Key studies excluded at full-text stage, with reasons.

Table S3: Newcastle-Ottawa Quality Assessment Score (NOS).

Table S4: Results from univariate meta-regression analysis.

Table S5: Results from multivariate meta-regression analysis.

Figure S1. Funnel plots and P-value (for Egger test) for each outcome, systolic blood pressure, diastolic blood pressure, and hypertension.

Table S1. Search strategy

Cohort studies: selection: 1) Representativeness of the exposed cohort; 2) Selection of the non exposed cohort; 3) Ascertainment of exposure; 4) Demonstration that outcome of interest was not present at start of study; comparability: 1) Comparability of cohorts on the basis of the design or analysis outcome: 1) Assessment of the outcome; 2) Was follow-up long enough for outcomes

to occur; 3) Adequacy of follow-up; Cross-sectional studies [9]:selection: 1)Representativeness of the sample; 2) Sample size; 3) Non-respondents; 4) Ascertainment of the exposure; comparability: 1) Confounding factors are controlled; outcome: 1) Assessment of the outcome; 2) Statistical tests

Table S4. Results from univariate meta-regression analysis.

Outcome
