

Supplementary Materials:

Supplementary Figure S1. Progression of RANTES, CD40L, hsCRP, IL6, and calcitonin serum levels in subgroups α (initial performance < 100%, performance gain $\leq 2.9\%$, n=9, Supplementary Figure 1A), β (initial performance < 100%, performance gain $> 2.9\%$, n=32, Supplementary Figure 1B), γ (initial performance $\geq 100\%$, performance gain $\leq 2.9\%$, n=18, Supplementary Figure 1C), and δ (initial performance $\geq 100\%$, performance gain $> 2.9\%$, n=39, Supplementary Figure 1D) over the course of 8 months. “*” indicates a two-tailed p-value of $p < 0.05$ comparing baseline values to those at the end of the study.

Supplementary Figure S2. Progression of RANTES, CD40L, HDL, LDL, and serum triglycerides in subgroups α (initial performance < 100%, performance gain $\leq 2.9\%$, n=9, Supplementary Figure 2A), β (initial performance < 100%, performance gain $> 2.9\%$, n=32, Supplementary Figure 2B), γ (initial performance $\geq 100\%$, performance gain $\leq 2.9\%$, n=18, Supplementary Figure 2C), and δ (initial performance $\geq 100\%$, performance gain $> 2.9\%$, n=39, Supplementary Figure 2D) over the course of 8 months. “**” indicates a two-tailed p-value of $p < 0.05$ comparing baseline values to those at the end of the study.
