

Table S1. Description of sampling sites.

Site	Location	Description	Coordinates
S0	Siechnice	The site is about 0.7 km from the slag heap in the vicinity of the main road in direction to Wrocław (Grafitowa street). Companies dealing with laser cutting, the electrical industry and car service are located nearby.	51°04'47.1 "N 17°12'48.72"E
S2	Siechnice	This sampling site was located 100 m from the southern side of slag heap, along the eastern ring road of Wrocław. .	51°02'28.0"N 17°07'59.4"E
S3	Siechnice	This point was also located in the southern part of heap, about 40 m, near the eastern bypass of Wrocław.	51°02'28.5"N 17°08'07.7"E
S4	Siechnice	The sampling point was situated 30 m from the southern side of the heap, also near the eastern bypass of Wrocław.	51°02'29.2"N 17°08'13.2"E
S5	Siechnice	The sampling site located on the edge of the heap on the south-eastern side, about 100 m from the eastern bypass of Wrocław and 160 m from residential buildings.	51°02'30.2"N 17°08'16.7"E
S1-b	Siechnice	The site located 0.4 km from the slag heap, next to the drainage ditch. In close proximity to the place of collection, there was a street with significant traffic due to the vicinity of the cement manufacturing plant.	51° 2' 31.476" N 17° 7' 47.08" E
S2-b	Siechnice	This point was situated 0.3 km from the slag heap, next to the drainage ditch, too. Soil sampling was in the immediate vicinity of the residential houses.	51° 2' 22.931" N 17° 8' 2.456" E
S3-b	Siechnice	This site was in a meadow, about 0.2 km from the top of the heap. There were fruit trees in close proximity. The meadow is away from communication routes, however the company TOI TOI Polska Sp. z o.o. is located nearby, probably not having a significant impact on the adjacent meadow.	51° 2' 38.947" N 17° 8' 13.815" E

S4-b	Siechnice	This site is approx. 0.1 km from the top of the slag heap. The works of the waste processing plant are carried out directly at the site of soil sampling. Within a radius of about 150 m around the heap, the area is heavily transformed not only by the movement of excavators, but also by contamination of the soil with waste.	51° 2' 33.431" N 17° 8' 2.157" E
G2-a	Głogów	in The area of sampling is a meadow, in the leeward side from the smelter, in a potential stream of pollutants from the Głogów smelter. It was an open, flat meadow with single trees.	51°6'79.388" N 16°0'08.880" E
G3-a	Głogów	The point was located in the leeward side from the smelter, in the potential pollution stream of the Głogów smelter. It was in the vicinity of the forest and vegetation of height up to 1 m.	51°6'77.380" N 16°0'08.623" E
G1-b	Głogów	The point was situated more than 2.2 km north-west from the smelter. The point was classified as wasteland, i.e. areas of land which have lost their value in use as a result of industrial activity. These are lands that have been degraded by the Głogów Copper Smelter.	51°6'96.253" N 15°9'64.539" E
G2-b	Głogów	This site was located more than 1 km from the smelter to the south. The point was classified as wasteland, i.e. areas of land which have lost their value in use as a result of industrial activity. These are lands that have been degraded by the Głogów Copper Smelter.	51°6'81.585" N 15°9'81.681" E
G3-b	Głogów	The point was located less than 0.6 km from the smelter. The area was classified as wasteland, i.e. areas of land which have lost their value in use as a result of industrial activity. These are lands that have been degraded by the Głogów Copper Smelter.	51°6'84.511" N 16°0'00.636" E
O1	Oława	The point was situated in the immediate vicinity of the smelter, approximately 0.2 km from the main pollutant emitter (chimney), in the west/north-west of the smelter.	50°9'32.642 " N 17°3'01.220" E
O2	Oława	The area of sampling is situated 0.4 km from the smelter, in an area of a garden next to a residential building, in west/north-west of the smelter. In the neighbourhood there is a supermarket, built on the site of a former sawmill..	50°9'38.023" N 17°3'01.914" E

O3	Oława	The point was located 0.9 km from the pollutant emitter, in the meadow in the west/north-west of the smelter.	50°9'33.305" N 17°3'12.698" E
O4	Oława	The point was located on an island on the river, about 1.5 km from the smelter. The site was also situated in the west/north-west of the smelter.	51°1'79.824" N 16°1'04.339" E
L1	Legnica	The site was situated in the leeward side, in the immediate vicinity of the main emitter, approximately 0.3 km away. There was no natural barrier separating the area from the emitter. There were no major communication routes or paved roads near this sampling point.	51°1'86.485" N 16°1'13.424" E
L2	Legnica	The point was located in the leeward side from the smelter, near the slag heap, at a distance of about 0.1 km. The area was separated from pollution source with a thin strip of trees and shrubs	51°1'79.918"N 16°1'16.544" E
L3	Legnica	The point was located in the leeward side from the smelter, near the copper sludge post-flotation tank, at a distance of about 0.05 km. The area was fenced off with thick trees and shrubs.	51°1'79.824" N 16°1'04.339" E

Table S2. The value for parameters for calculation of exposure dose .

Parameter	Adults	Children
