

Table S1. Subgroup analysis of age among different multimorbidity patterns in relation to mortality.

		Multimorbidity Patterns			
		Cardiometabolic	Arthritis–Cataract	Relatively Healthy	Multimorbidity
Age	≥65(3037)	1.161 (0.944–1.427)	0.876 (0.683–1.125)	Ref	1.114 (0.769–1.614)
	<65(2094)	1.378 (1.039–1.829)	0.821 (0.540–1.247)	Ref	2.220 (1.273–3.873)

Confounding factors: age, income level, social participation, self-rated health, admission in the past year, disability, depression, smoking. The data in the tables are odds ratios with confidence interval (CI).
