

(B)

Oil Red O staining

200µm

(C)

Alizarin red staining

200µm

**Figure S1. Multi lineage potential of mouse ASCs (GFP)** Mouse ASCs were cultured for 3 weeks in the appropriate induction media to evaluate their ability to differentiate (A). The cells were analyzed for (B) adipogenic (Oil red-O) and (C) osteogenic (alizarin red S) differentiation capacity.
