

**Supplementary Figure 1. Detection of MLV FL13b RNA in sera.** The sera of the 4 DNA+MLV groups, collected on D29, 36, 42 and 50, were assayed for detection of MLV FL13b RNA using TaqMan qRT-PCR. TCID50eq/ml were calculated. The extrapolated TCID50eq/ml curves are shown for each pig represented by a distinct color.
