

Figure S8. Impact of IVM at low concentration on nuclear accumulation of pp53. HeLa cells were exposed to 0.2 μM IVM for 24 h and cellular distribution of pp53, one of the importin α cargo proteins, was evaluated. Each data point represents Fn/Fc from a single cell; data were normalized to control cells and are indicated as mean \pm SEM. Statistical significance: * $p < 0.05$; Unpaired t test.
