

Supplementary Video S1. Growth of CVI988-pp38-GFP virus monitored in real time using In-cuCyte S3 live imaging system. GFP cell phase object of CVI988-pp38-GFP virus was captured every 4h for 112 h from 36 separate regions per well by IncuCyte S3. Images of one region from all time points was exported to generate movie. The scale bar, 400 μ m.
