

Supplementary figure S2 : Effect of Lactoferrin and lactalbumin on the cell viability.

Vero (dark blue) or Caco-2 (light blue) cells were incubated with culture medium (NT), dimethyl sulfoxide (DMSO) or different concentrations of lactoferrin or lactalbumin for 2h at 37°C. Cell layers were washed in culture medium and cultured 48h at 37°C before the MTT assay (n=3).
