

**Supplementary Figure S1. Protein expression of immunogenic cell death (ICD) markers in HPAF-II and MIA PaCa-2 upon infection with GoraVir and HAdV-C5.** A) Light microscopy images of HPAF-II and MIA PaCa-2 cells infected with GoraVir or HAdV-C5 at MOI 10 and 48 hpi. Scale bar represents 500µm; B) Percentage of CRT-positive, HSP70-positive, or double-positive HPAF-II and C) MIA PaCa-2 cells as determined by flow cytometry. Mean is depicted of n=3 biologically independent replicates. Means were compared one-way ANOVA with Tukey correction for multiple testing. Significant differences are indicated by asterisks, with p values < 0.05 shown as \*, <0.01 shown as \*\*, and <0.001 shown as \*\*\*.
