

Supplementary material

Swine as the animal model for testing new formulations of anti-inflammatory drugs: Carprofen Pharmacokinetics and Bioavailability of the intra-muscular route

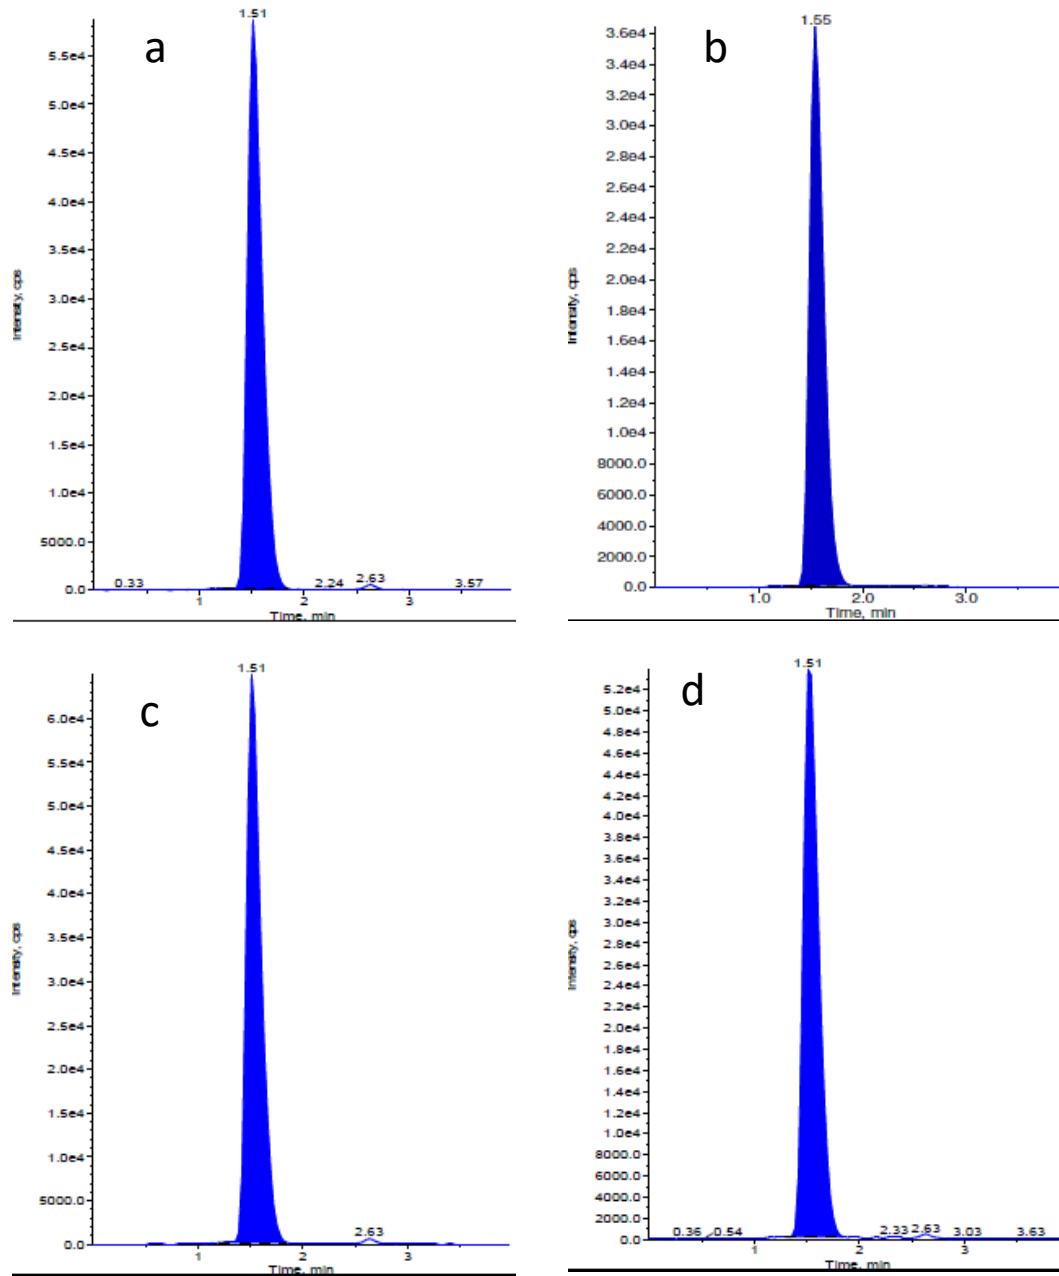

Figure S1. Ionograms of blank samples with internal standard (IS, Carprofen-d3). (a) blank sample ionogram of swine 1; (b) blank sample ionogram of swine 2; (c) blank sample ionogram of swine 3 and (d) blank sample ionogram of swine 4.

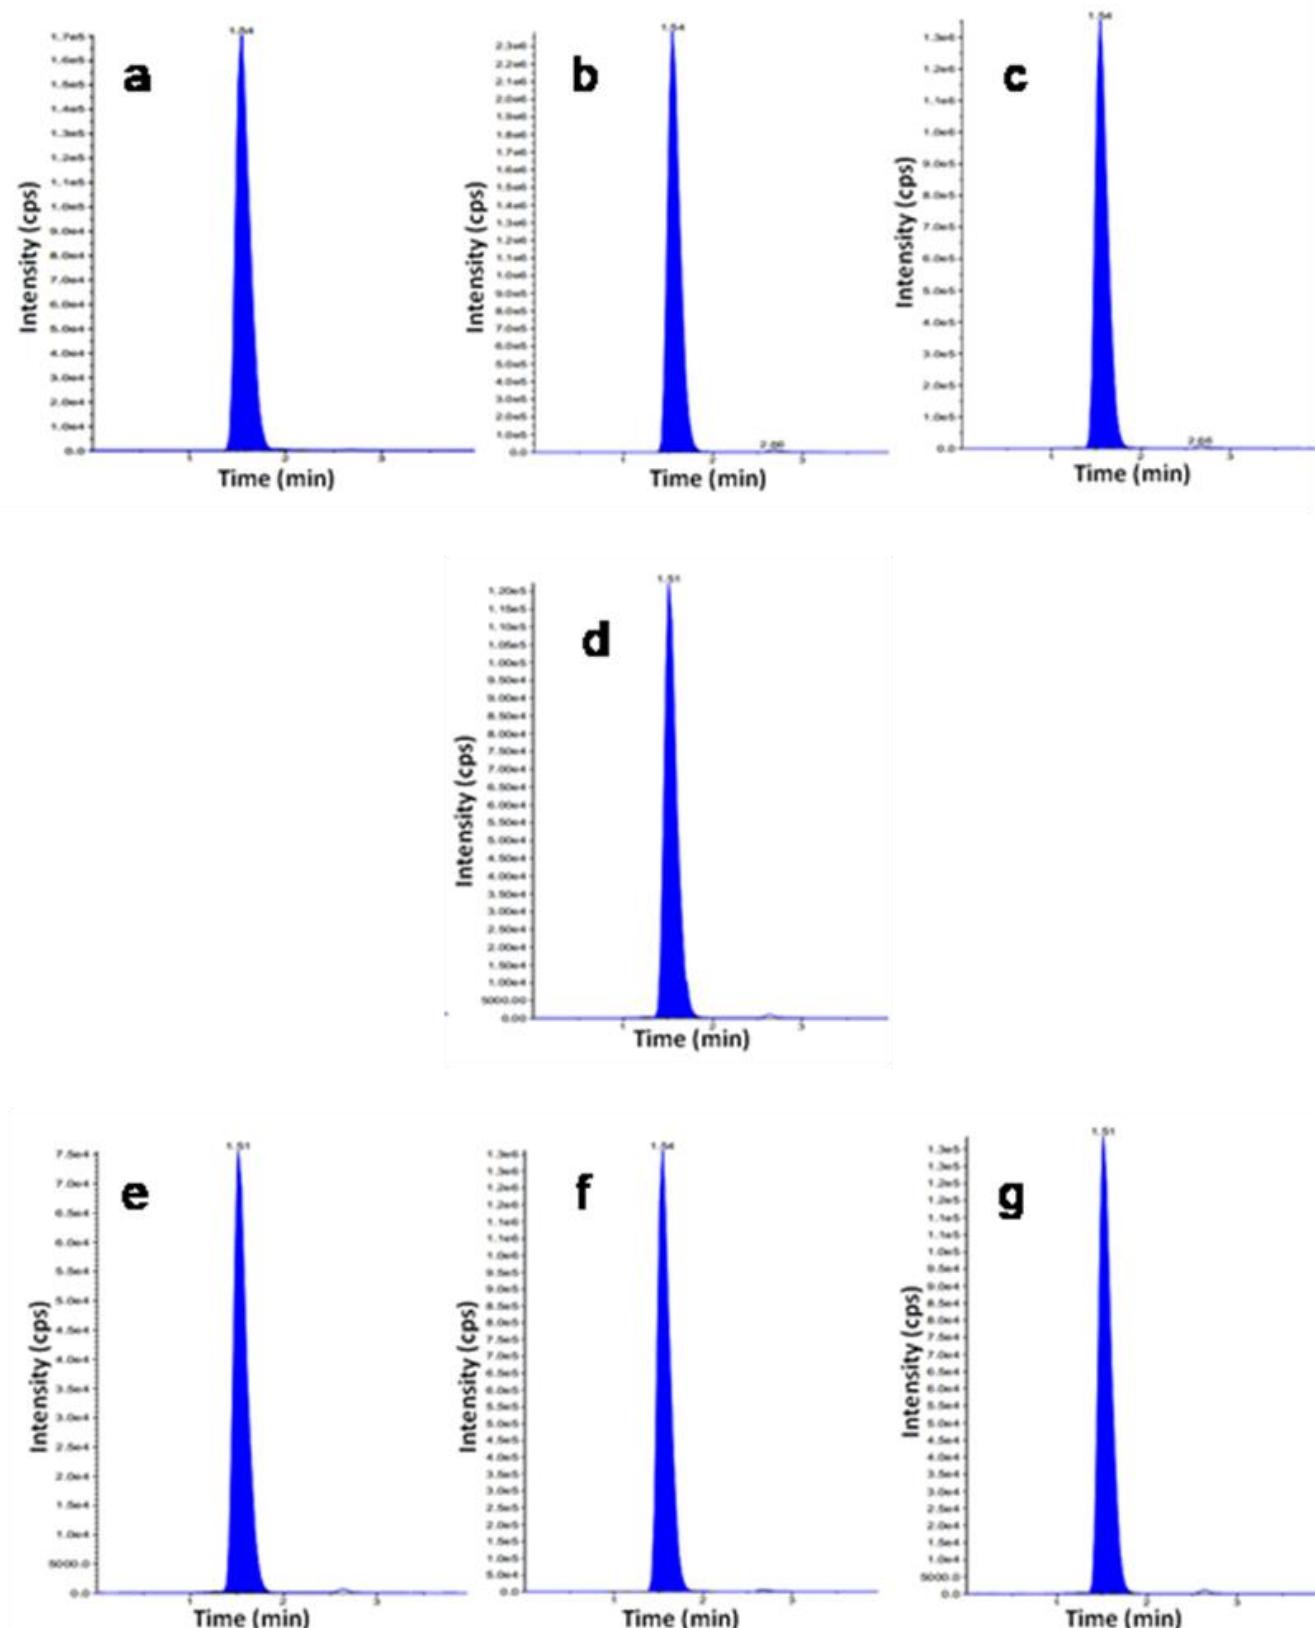

Figure S2. Ionograms of CP at different plasma samples times of swine number 1; (a) standard curve at 750 ng/mL; (b) intravenous levels at 5 min; (c) intravenous levels at 6 h; (d) intravenous levels at 24 h; (e) intramuscular levels at 5 min; (f) intramuscular levels at 6 h, and (g) intramuscular levels at 24 h.

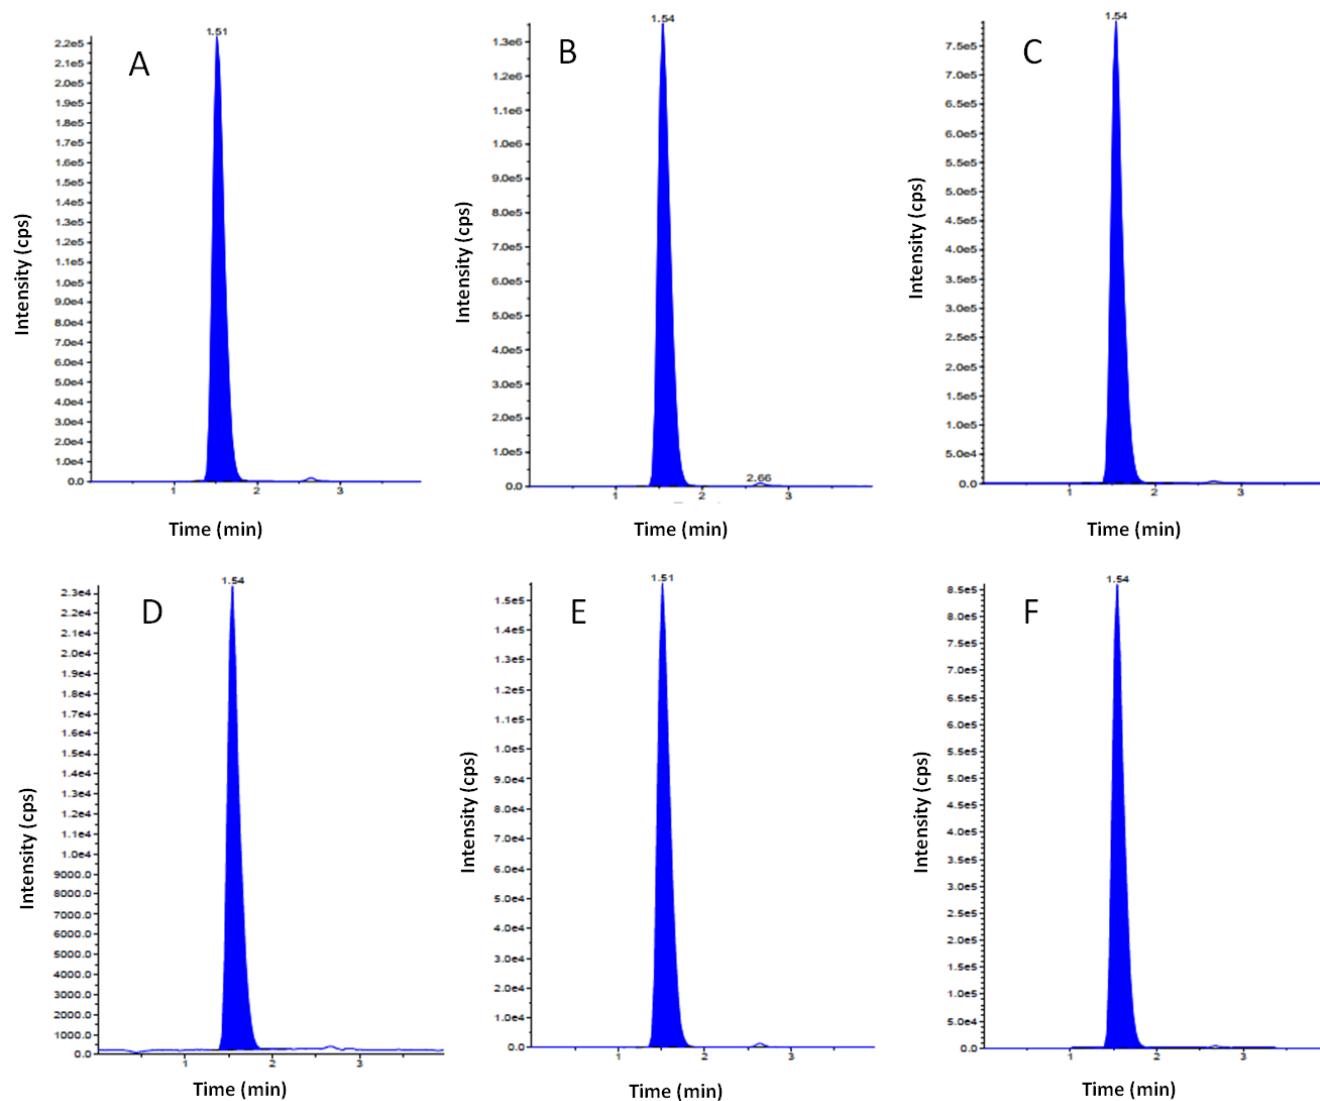

Figure S3: Ionograms of CP at different plasma samples times of swine number 2. A: IV levels at 5 min; B: IV levels at 6h; C: IV levels at 24h; D: IM levels at 5 min; E: IM levels at 6h and F: IM levels at 24h.

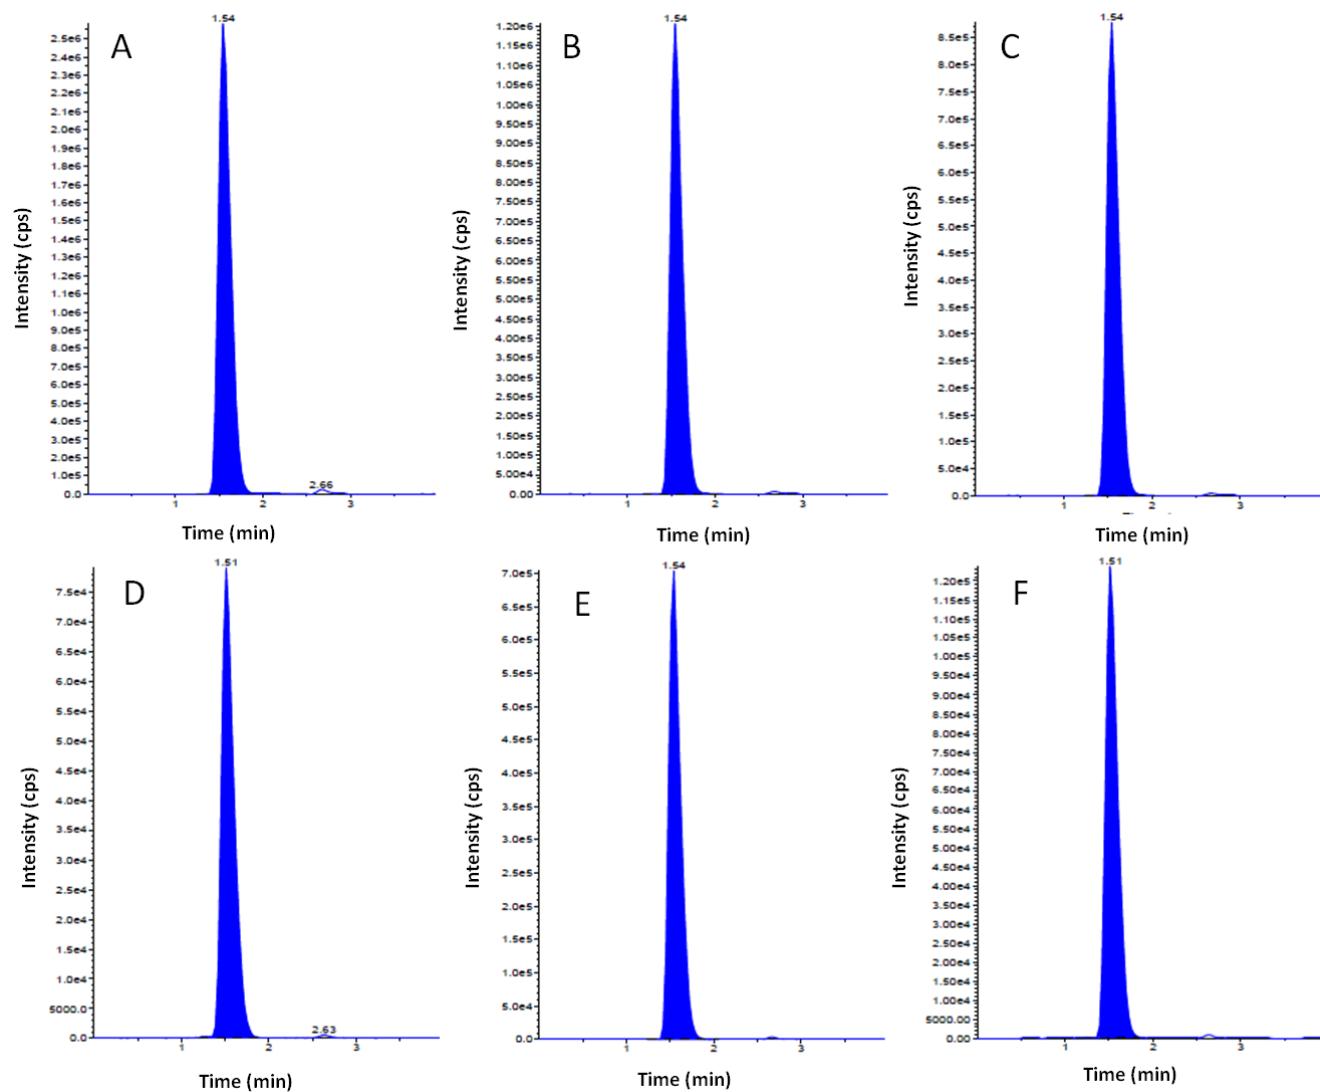

Figure S4: Ionograms of CP at different plasma samples times of swine number 3. A: IV levels at 5 min; B: IV levels at 6h; C: IV levels at 24h; D: IM levels at 5 min; E: IM levels at 6h and F: IM levels at 24h.

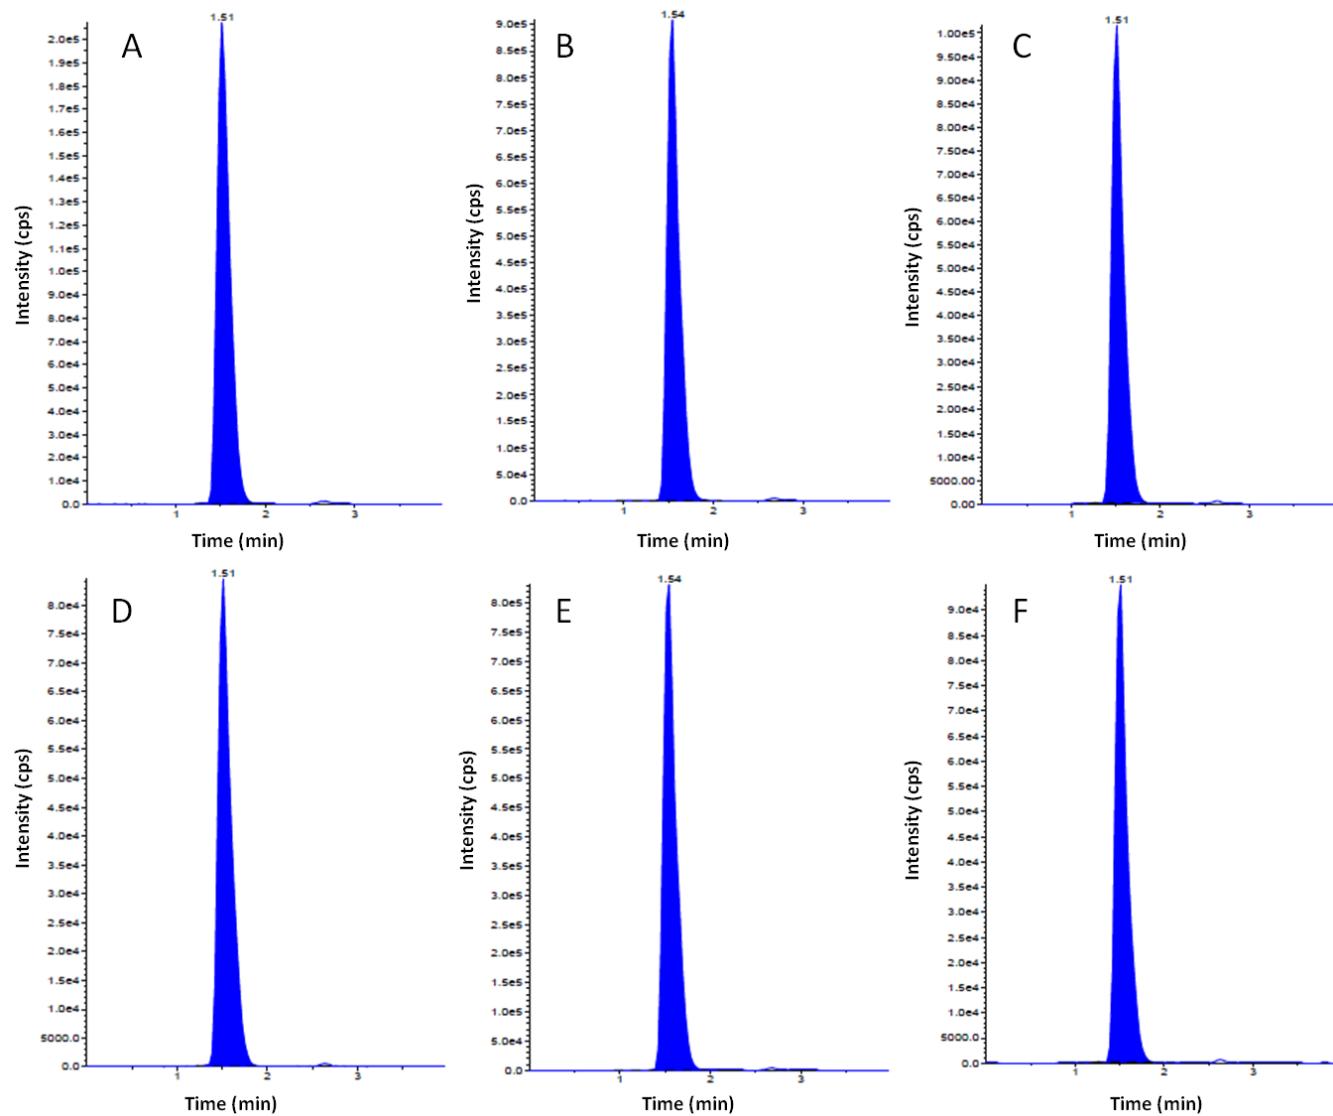

Figure S5: Ionograms of CP at different plasma samples times of swine number 4. A: IV levels at 5 min; B: IV levels at 6h; C: IV levels at 24h; D: IM levels at 5 min; E: IM levels at 6h and F: IM levels at 24h.

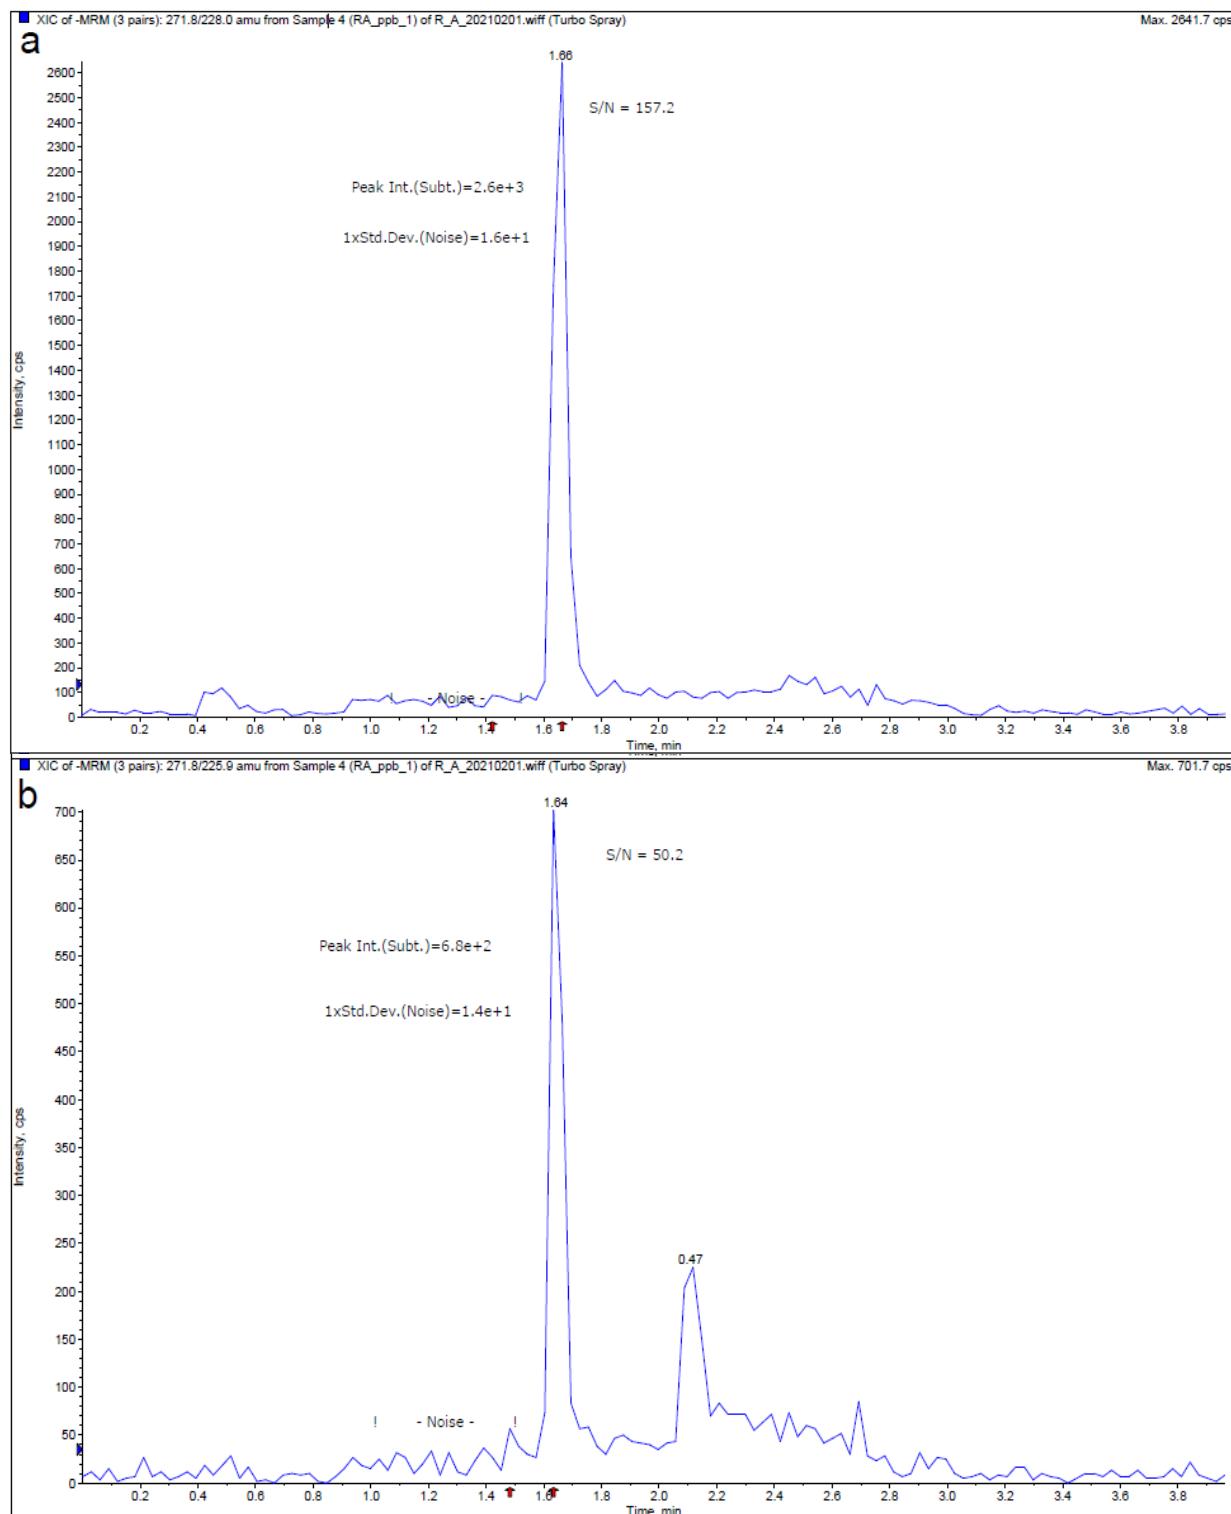

Figure S6: Ionograms of Limit of Detection (LOD) and Limit of Quantification (LOQ) for: (a) transition T1, and (b) transition T2.

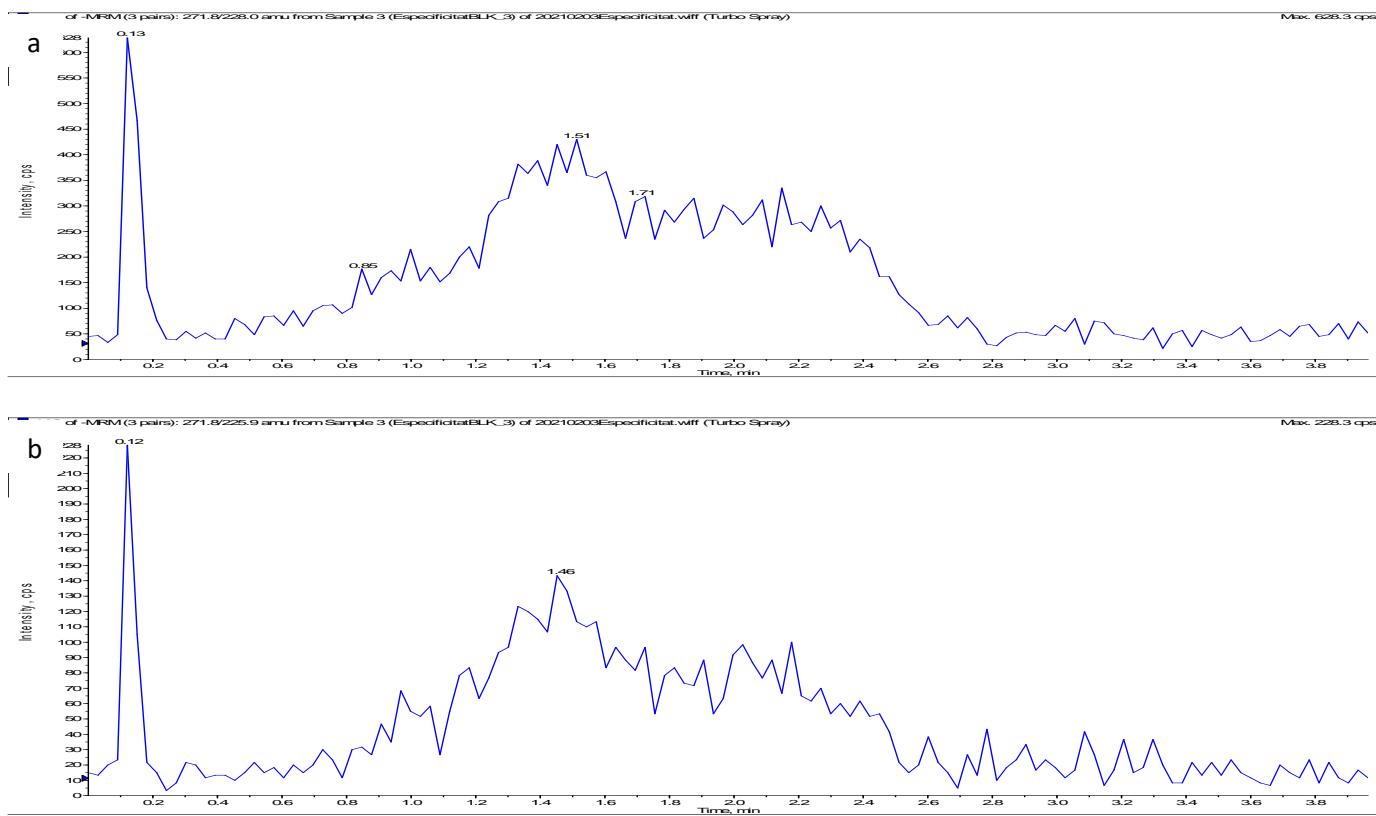

Figure S7: Ionograms of determination of Specificity with blank samples of plasma without IS for: (a) transition T1 and (b) transition T2.

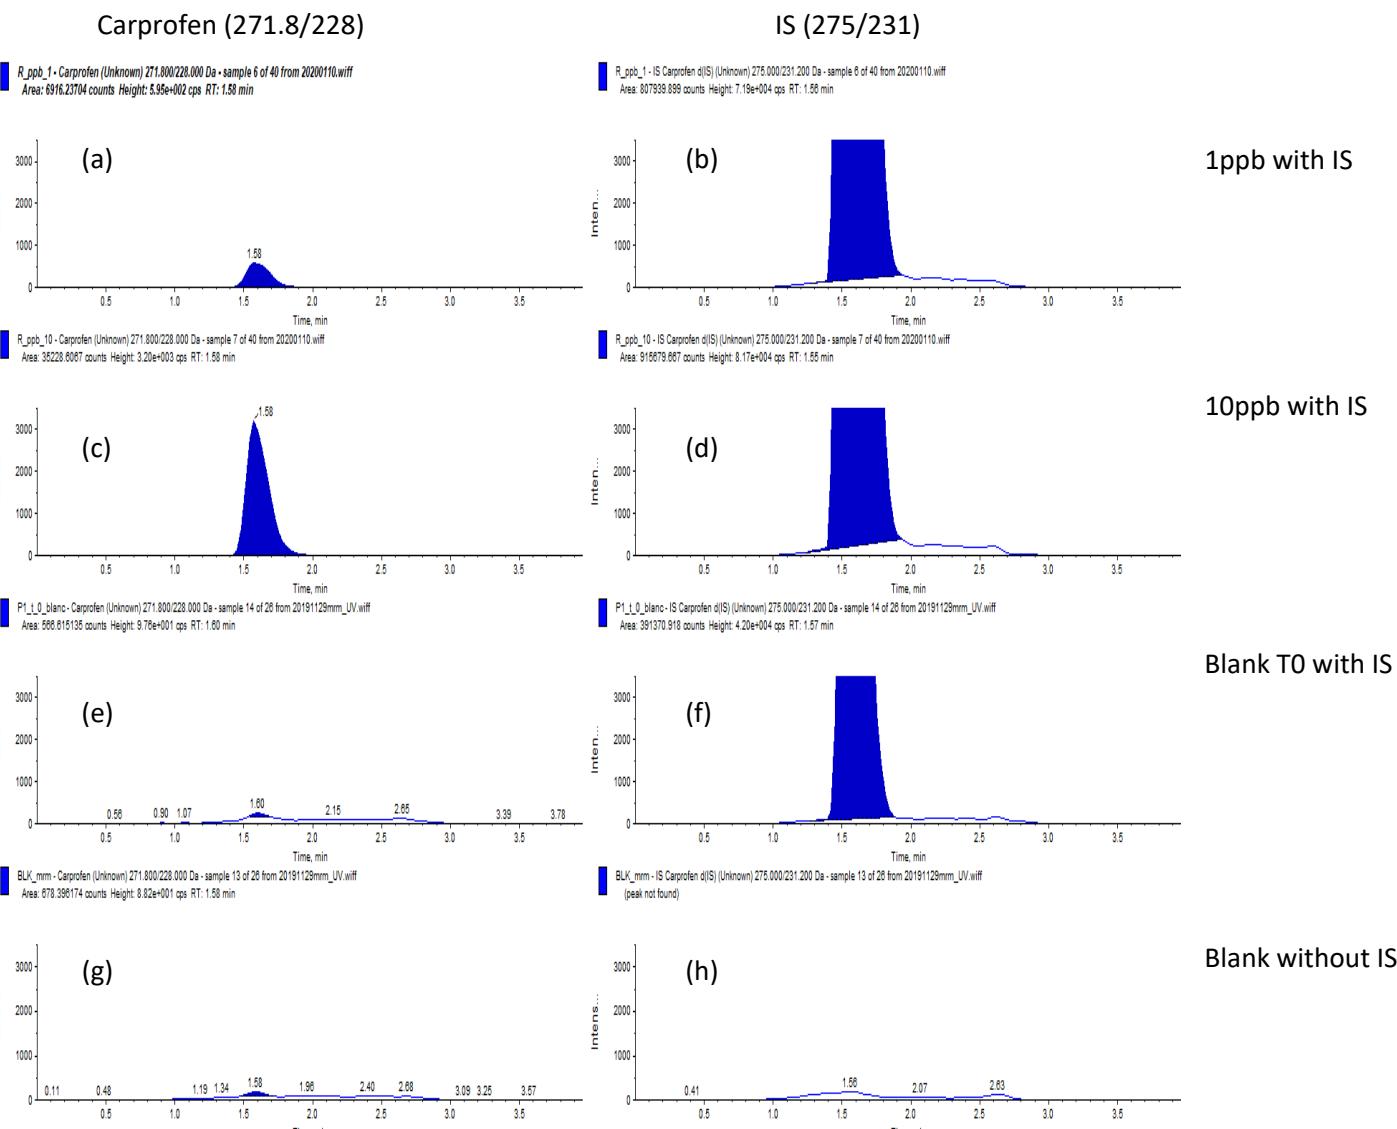

Figure S8: Ionograms of Std (1 ppb and 10 ppb with IS 100 ppb), and samples with (100 ppb) and without IS: (a) Std 1ppb: Carprofen, (b) Std 1 ppb: IS (c) Std 10 ppb: Carprofen, (d) Std 10 ppb: IS, (e) Blank sample T0 with IS (100 ppb): carprofen, (f): Blank sample T0 with IS (100 ppb): IS, (g) Blank sample without IS: carprofen (h) Blank Sample without IS: IS signal.

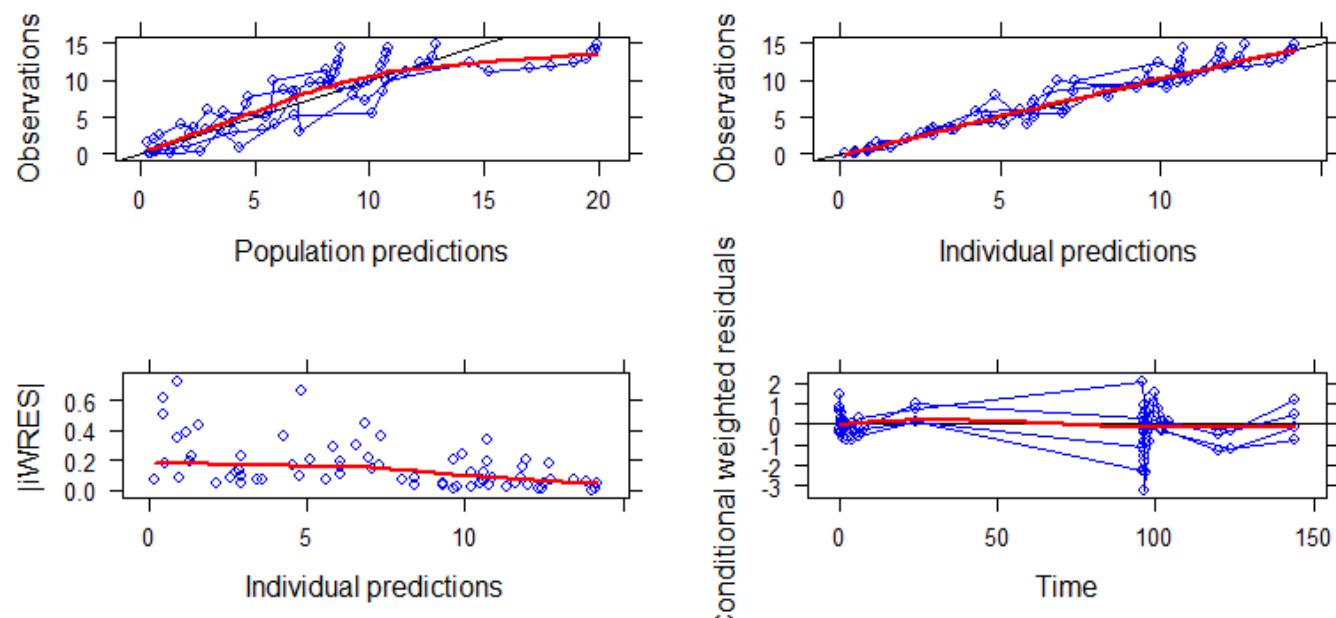

Figure S9. Goodness-of-fit plots for the final population pharmacokinetic model. Observed concentrations versus Population predicted and individual predicted concentrations. Individual weighted residuals (IWRES) vs individual predicted concentrations; Conditional weighted residuals (CWRES) vs time. Blackline: identity line; Red line: Smooth line indicating the general data trend. Concentrations expressed as $\mu\text{g/mL}$, Time given in hours.

Table S1: CP Pharmacokinetic parameter values in different animal species. Statistical comparison of the CP pharmacokinetic parameters ($HL\beta$, AUC, Vdss, Cl and MRT) of swine versus different studied species such as: dogs (4 mg/kg IV Rimadyl®) [29], horses (4mg/kg IV Rimadyl®) [19], cats (4 mg/kg IV Zenecarp®) [30], rabbits (2 mg/kg IV Rimadyl®) [24], sheep (4 mg/kg IV racemic CP) [23], humans (100 mg IV Imadyl®) [27], and the present study in swine (4 mg/kg IV Rimadyl®) expressed as mean \pm SD, except for dogs and swine (mean and coefficient variation, given in parenthesis, when available).

Parameters	Dog (n=6)	Horse (n=6)	Cat (n=5)	Rabbit (n=6)	Sheep (n=8)	Human (n=6)	Swine (n=4)
