**Figure S2.** Antibacterial activity of optimized AgNPs prepared using the  $\text{Ag}_2\text{SO}_4$  precursor, positive control, blank control, silver mixture before synthesis, and combination of PVA and 2-propanol. The incubated solutions were serially diluted and deposited on the agar plate before incubation at  $37^\circ\text{C}$ .

**Table S1.** AgNPs mean hydrodynamic diameters and zeta potential after pH adjustment at 7 and 30 times dilution in a 1 mM KCl solution. The measurements were made in triplicate with optimized AgNPs (AgNP-1, AgNP-2 and AgNP-3) obtained starting from the Ag<sub>2</sub>SO<sub>4</sub> precursor with an ionic concentration of 2 mM.
