

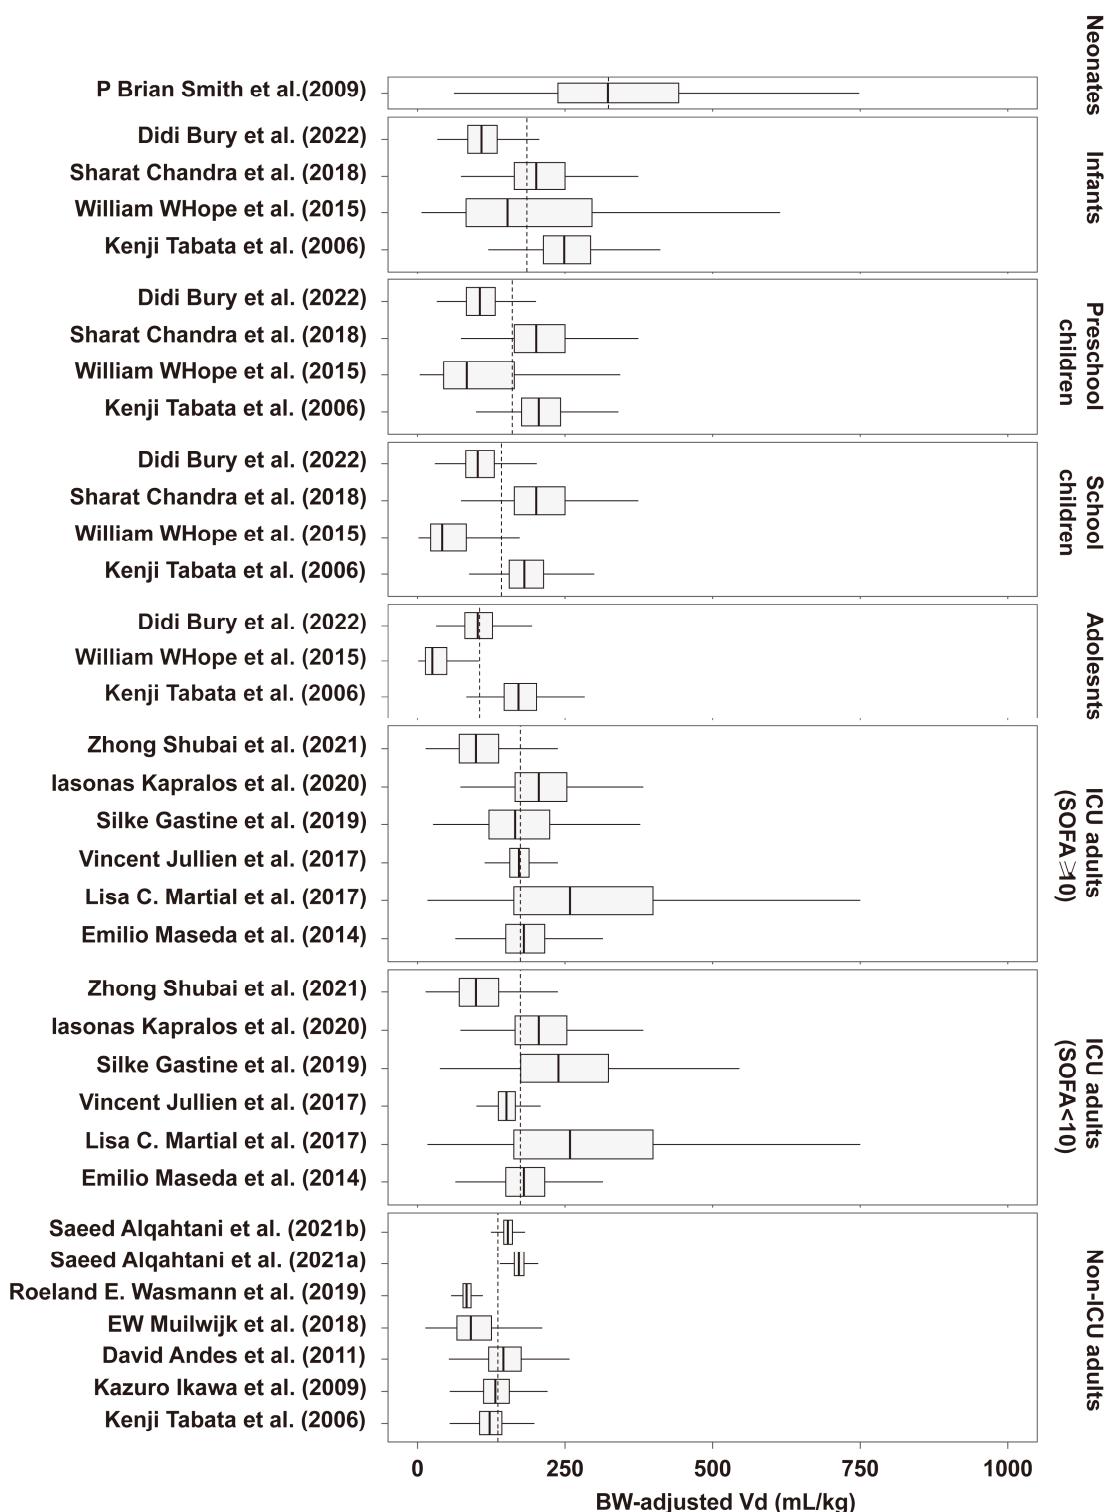

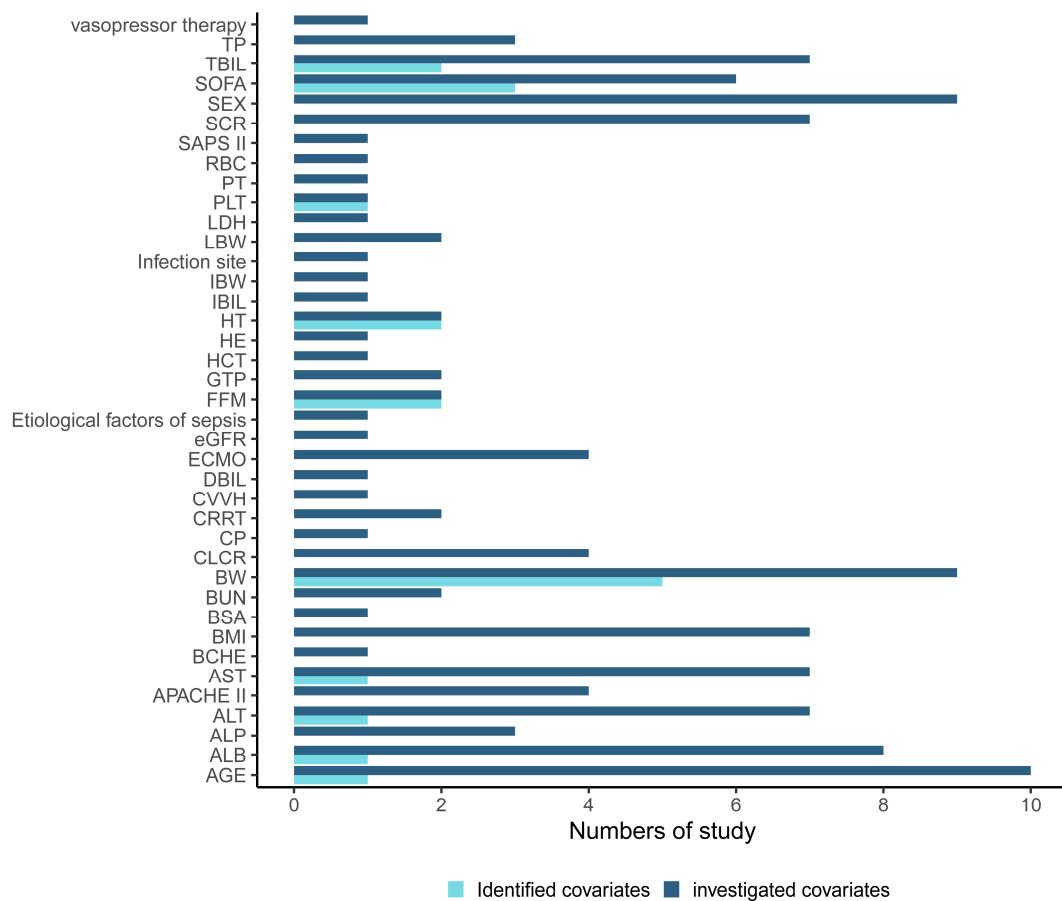

**Figure S1.** Simulated concentration-time profiles of micafungin over 24 h at steady state for (A) neonates, (B) infants, (C) preschool children, (D) school children and (E) adolescents [16,18-21]. The solid orange lines represent the median of the simulated concentration-time profiles and the light orange shadows represent the 5<sup>th</sup>-95<sup>th</sup> percentiles of the concentration-time profiles. MFG was intravenously administered once daily for 7 days as follows: 4 mg/kg in neonates, 2 mg/kg in children younger than 12-year-old, and 100 mg/day in adolescents and adults.

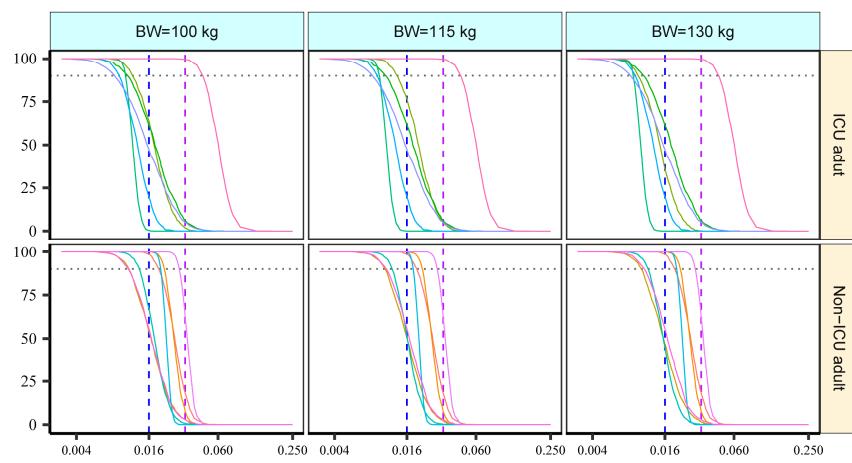

**Figure S2.** Distribution of the BW-adjusted Vd of micafungin in various typical virtual populations over 24 h at steady state [8,11,12,16–21,27–33]. The SOFA score were set to 7 for ICU patients with SOFA<10 and 11 for ICU patients with SOFA≥10; The dashed lines in each panel represented the median values of Vd per body weight from all patients within each group.

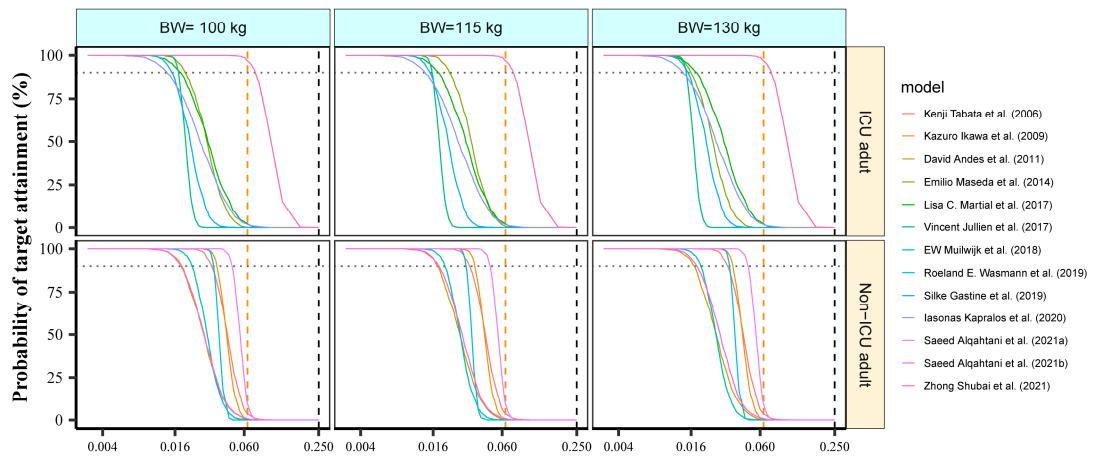

**Figure S3.** The histogram of the amount of investigated and identified covariates in included studies. AGE, age; HT, height; LBW, lean body weight; FFM, fat-free mass; IBW, idea body weight; TBW or BW, Total body weight; BSA, body surface area; BMI, body mass index; ALP, alkaline phosphatase; BCHE, butyrylcholinesterase; CVVH, Continuous Veno-Venous Hemofiltration; HE, haemodialysis; RBC, red blood cell count; HCT, hematocrit; PLT, platelet count; eGFR, estimated glomerular filtration rate; CLCR, creatinine clearance; SCR, serum creatinine; CRRT, continuous renal replacement therapy; TP, total protein; ALB, albumin; BUN, blood urea nitrogen; TBILI, total bilirubin; DBIL, direct bilirubin; IBIL, indirect bilirubin; ALT, alanine amino transferase or glutamic pyruvic oxaloacetate transaminase/aspartate aminotransferase; AST, aspartate aminotransferase; GTP, glutamate dehydrogenase; LDH, lactate dehydrogenase; SOFA, Sepsis-related organ failure assessment score, SAPS II, Simplified Acute Physiology Score; CP, Child-Pugh score.

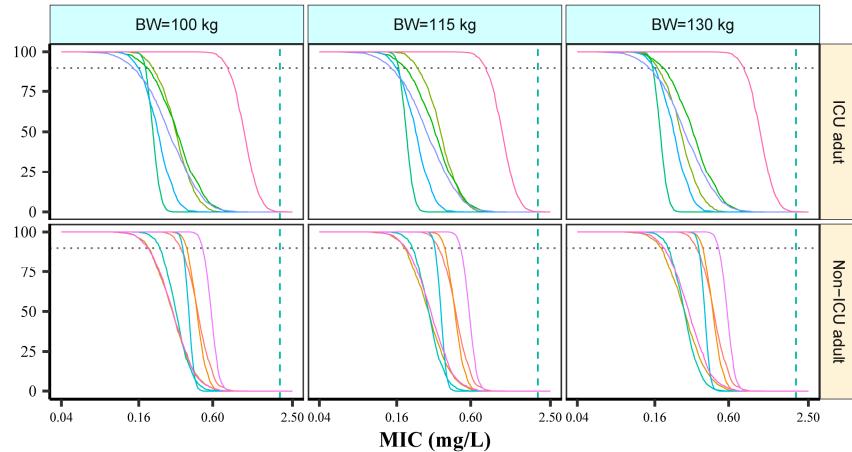

### *C. albicans* and *C. glabrata*

### *C. krusei* and *C. tropicalis*

### *C. parapsilosis*

**Figure S4.** The probability target achievement of micafungin over 24h at steady state for ICU adults or Non-ICU adults against *C. Albicans*, *C. glabrata*, *C. Krusei*, *C. tropicalis* and *C. parapsilosis* in included studies [8,11,12,16,17,27–33]. The MIC breakpoints for *C. Albicans* (blue), *C. glabrata* (pink), *C. Krusei* (black), *C. tropicalis* (orange) and *C. parapsilosis* (green) are marked with dashed and dotted lines in each panel, respectively. A PTA of 90% is highlighted with black dashed lines.

**Table S1.** Demographic information of simulated patients.

		median	min	max
