

Table S4. Expression of predicted effectors of *P. fijiensis*, based on Noar and Daub [44].

Effector groups	Proportion expressed (%)	Over-expression	Under- expression	No change	No expression
CANONICAL	92.5	115	105	4	16
NON- CANONICAL	88.9	2011	2226	154	548
TOTAL	89.1	2126	2331	158	564

Over-expression: candidates that are expressed higher in *P. fijiensis* in interaction with the host (termed “*in planta*”), in comparison with *in vitro* culture of *P. fijiensis*.

Under-expression: candidates that are expressed higher in *in vitro* culture of *P. fijiensis* than *in planta*.

No change, similar expression in both conditions.
