

Supplementary file S6. MTT results.

Cellular metabolic activity assessed with the MTT test after 24 h exposure to PM emission samples from different biodiesels, renewable diesel, and SD10 diesel. Bars represent four concentrations (30, 75, 150, and 220  $\text{mg ml}^{-1}$ ); whiskers are the standard deviation (SD). A) RME samples and SD10; B) SME samples and SD10; C) HVO samples and SD10.
