

**Table S1.** Available extraction protocols for obtaining carotenoids from TPW with corresponding yields. Values in italics are obtained by spectrophotometry, otherwise HPLC. All the parameters significant for extraction procedure were noted (Type of TPW, extraction solvent, extraction conditions specific for the type of extraction method). If available, the reference extraction method yields were also noted.

Extraction method	Type of TPW	Extraction solvent	Extraction conditions	Yield (mg/100g)**	Reference extraction method	Reference Yield (mg/100g)	Reference
	Peel and seeds	carbon dioxide	80 °C, 50 MPa, peel/seeds (70/30)	LY: 0.13	-	-	[81]
SFE	Peel	carbon dioxide	105 min, 10 g, 300 µm, 80 °C, 400 bar, 4 g CO <sub>2</sub> /min, SSR 1:2.5	LY: 72.9	CSE (hexane)	LY: 60.9	[82]
