

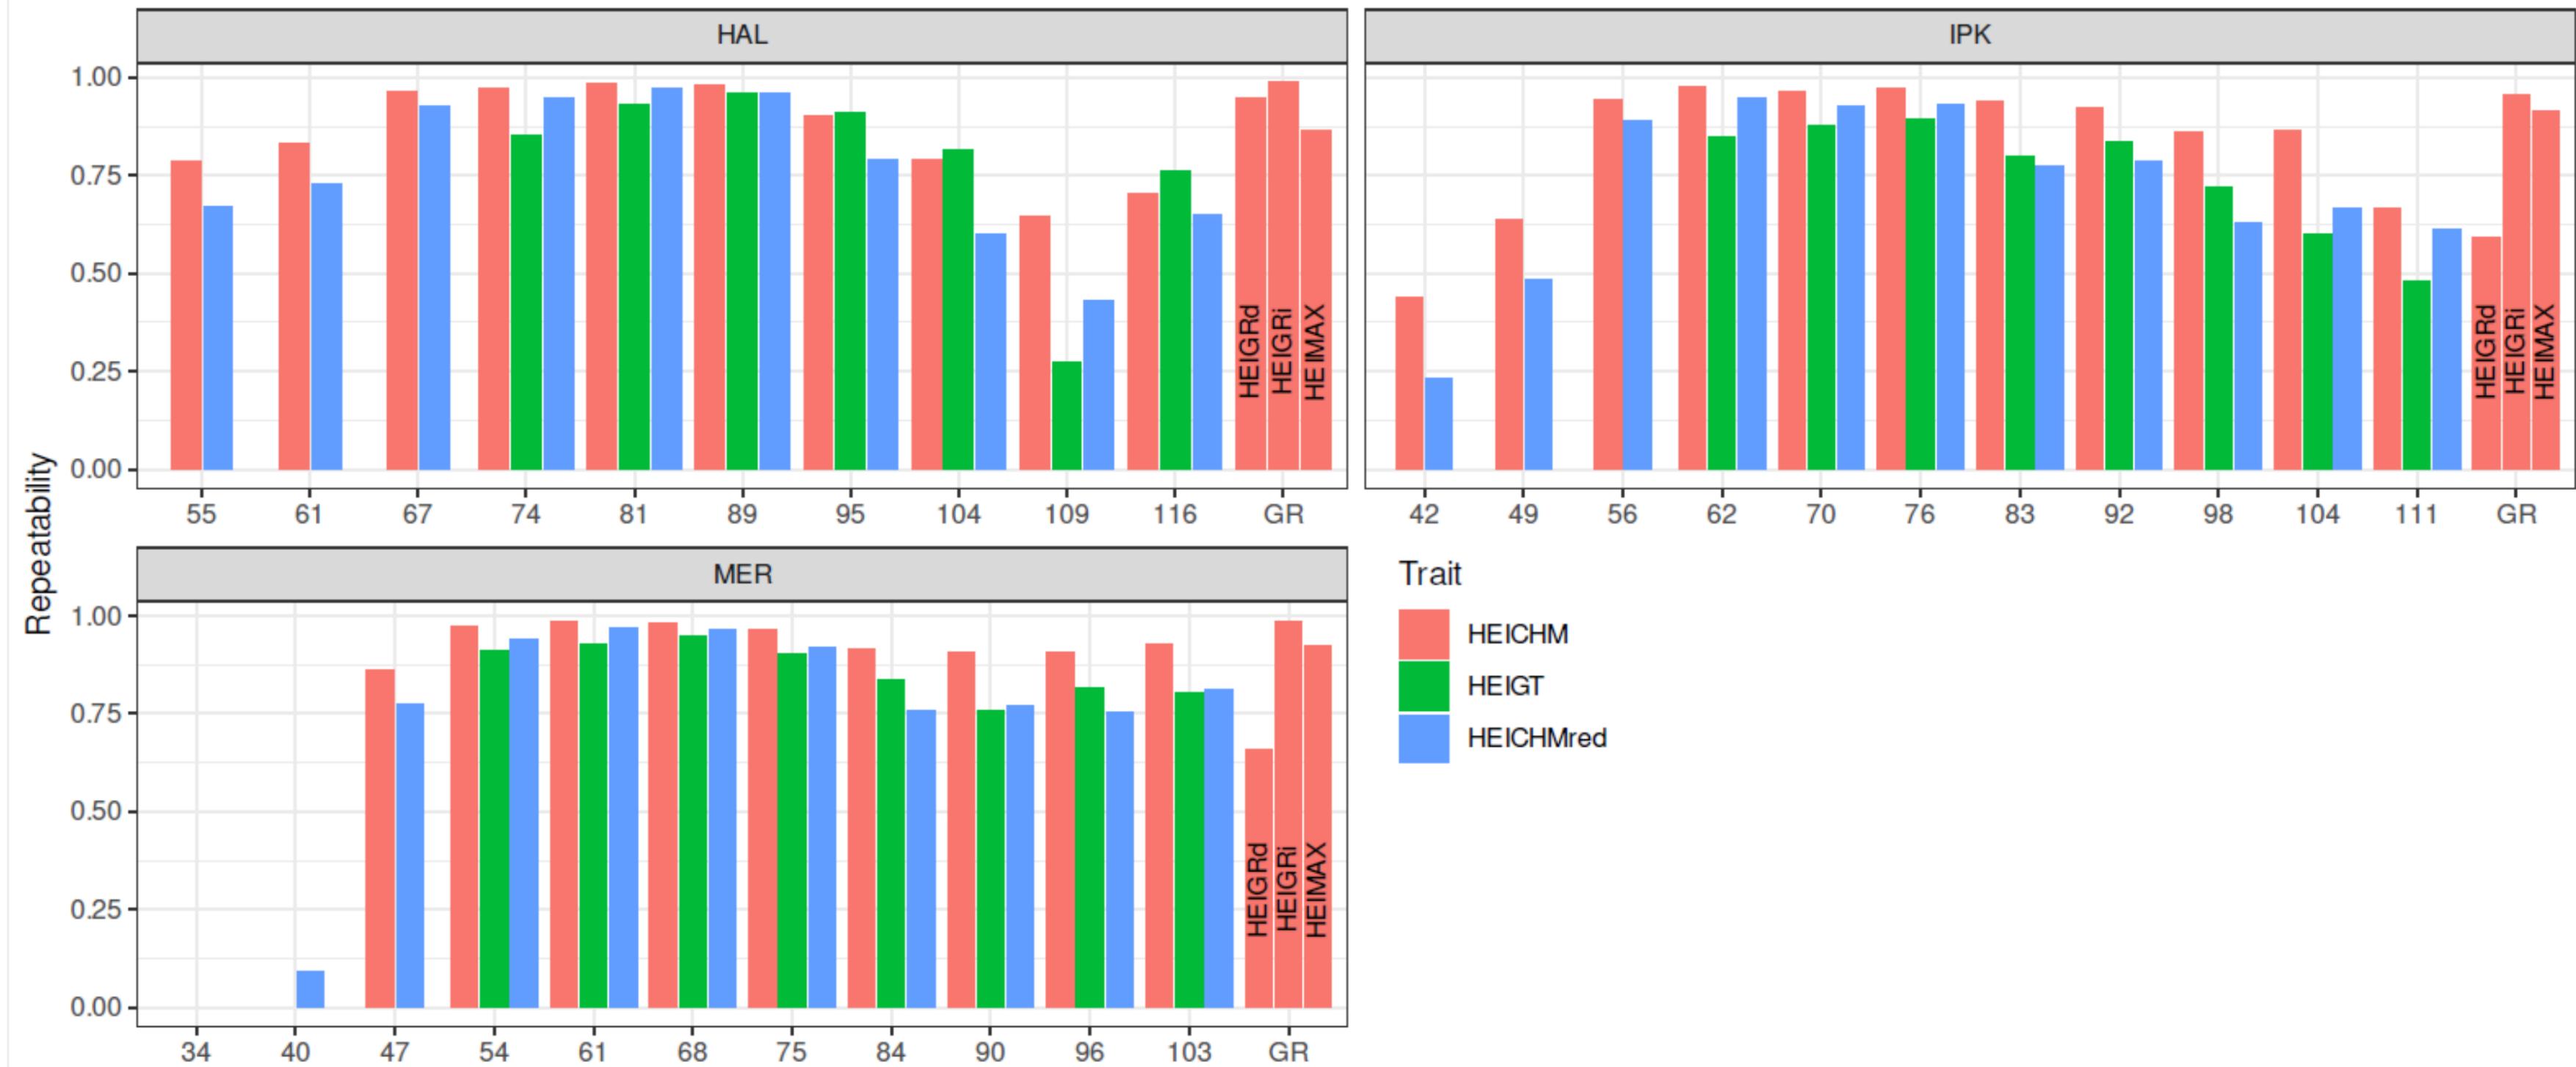

Figure S2. Repeatabilities of canopy height traits determined in the field and by UAV RGB imagery.

HEI<sub>GT</sub> represents field based measurements, HEI<sub>CHM</sub> were based on UAV phenotyping (n=360) and HEI<sub>CHMred</sub> is the reduced dataset of HEI<sub>CHM</sub> to the same plots of HEI<sub>GT</sub>. The growth rate (GR) traits were extracted out of the HEI<sub>CHM</sub> data.
