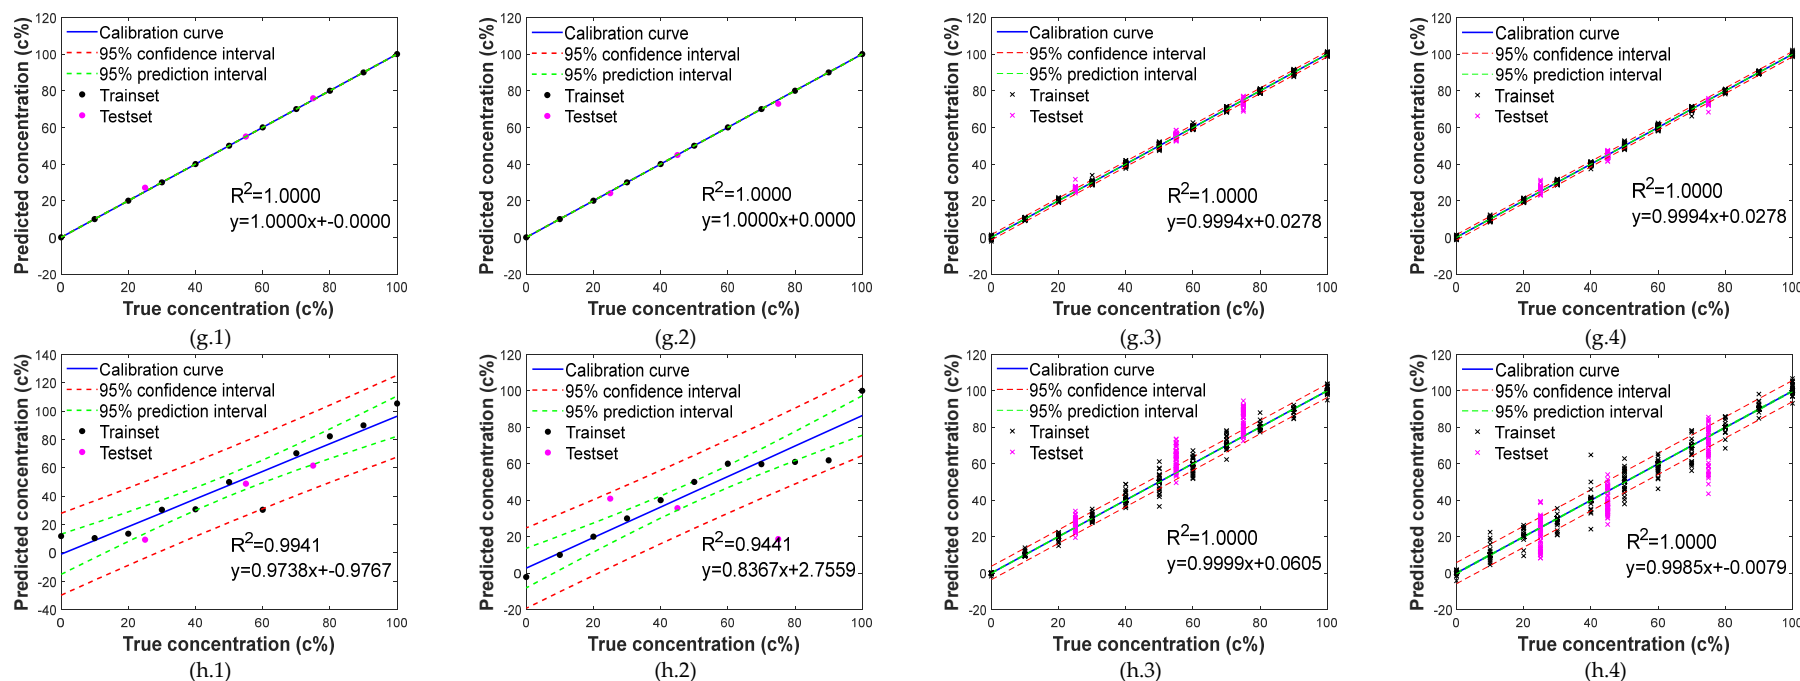

Figure S1. Calibration curve for Fo and Fa with the mean spectrum and the all spectra of the samples analyzed by ULR, ordinary MLR, Ridge, LASSO, Elastic Net, PCR, PLSR and BP. Where the blue lines show the theoretic fitted curve for the samples' contents, the black point show the predicted contents with each spectrum from training samples, and the magenta point show the predicted contents with each spectrum from testing samples. a, b, c, d, e, f, g and h indicate the ULR, ordinary MLR, Ridge, LASSO, Elastic Net, PCR, PLSR and BP, respectively; 1, 2, 3 and 4 indicate mean spectrum for Fo, mean spectrum for Fa, all spectra for Fo and all spectra for Fa, respectively.

Table S1. Predicted content of each sample on calibration and validation analyzed by the mean spectrum.

True content (c%)		Predicted content on calibration (c%)								Predicted content on validation (c%)
