

**Table S1**

Macronutrient composition and energy content in the experimental diets

	<b>HFD</b>	<b>ω3TG</b>	<b>ω3PL-H</b>	<b>ω3PL-L</b>	<b>Chow</b>
Macronutrient composition <sup>a</sup>					
Dry matter (g/100 g)	94.6	95.2	93.3	93.6	90.9
Ash (g/ 100 g)	3.7	3.7	5.5	5.9	6.8
Lipid (g/ 100 g)	29.1	30.2	35.5	34.9	2.9
Carbohydrate (g/ 100 g)	35.9	34.0	30.4	30.5	64.3
Protein (g/ 100 g)	16.4	16.2	21.9	22.3	16.9
Energy density (kJ/ 100 g)	20.4	20.6	20.1	20.6	13.0
Supplement					
Epax 1050 TG (g/ 100 g)	0.0	5.3	0.0	0.0	0.0
Krill oil (g/100g)	0.0	0.0	15.4	5.3	0.0
EPA+DHA content (g/ 100g)	0.0	3.3	3.3	1.1	0.0
EPA content ( g/ 100g)	0.0	0.8	2.1	0.7	0.0
DHA content (g/ 100g)	0.0	2.5	1.2	0.4	0.0

<sup>a</sup>The macronutrient composition of experimental diets was assessed by drying (Dry matter), gravimetry (Ash), Kjeldahl method (Protein), and the extraction after acid hydrolysis (Lipids), while the concentration of carbohydrates was calculated.

**Table S2**  
Primers used for qRT –PCR

Gene name	Symbol	Genbank Accession number	1. Forward primer

Results are expressed as fold change to HFD (n=8). Only significant gene expression regulations in response to dietary Omega-3 intervention were used. *Cyp4a32* and *Cyp4a10* were due to similarity indistinguishable when measured using RT-PCR, therefore the results in segments are sum of both of them.

**Figure S1.** Potential involvement of Omega-3 bioavailability in metabolic effects of Omega-3. (A) The relationship between Omega-3 index and the TAG content in the liver. (B) Relationships of Omega-3 index and EPA, DPA and DHA bioavailability with gene expression in proximal ileum in mice fed HFD with Omega-3 supplementation for 8 weeks. Pearson correlation coefficient strength as indicated in figure and the table. Bold values in the table denote statistical significance at the  $p < 0.05$  level.

**Figure S2.** The effect of HFD feeding on the small intestine. (A) Length of small intestine and (B) length of villi in proximal ileum of mice fed Chow or HFD for 8 weeks. (C) The 12 most up- and down regulated genes compared to Chow as assessed by microarray analysis in whole length of small intestine from mice fed HFD. (D) Enrichment for Gene Ontology Process terms of genes differentially expressed between the HFD and Chow groups in the small intestine (identified by DAVID analysis). GO terms were sorted based on p-values ( $p < 0.005$ ). (E) The expression of selected genes of mitochondrial and peroxisomal FA oxidation in proximal ileum. Data are means  $\pm$  SEM ( $n = 8$ ). \*, significantly different vs. Chow (t-test;  $p < 0.05$ )
