

Table S1. Excluded studies.

#	Author	PMID or DOI	Reason for exclusion
1.	Asemi 2013 [92]	23466048	Diet modification (DASH diet) rather than specific dietary supplementation.
2	Jamilian 2018 [73]	29385062	No markers of oxidative stress were assessed
3	Lopez-Tinoco 2011 [93]	21327985	Not a randomized clinical trial
4	Samimi 2015 [94]	24973862	No markers of oxidative stress were assessed
5	Smith 2015 [95]	10.1016/j.ajog.2014.10.864	Pharmaceutical intervention (metformin) rather than dietary supplementation.
6	Yazdchi 2016 [96]	27247730	No markers of oxidative stress were assessed
7	Yessoufou 2015 [97]	25961055	Not a randomized clinical trial
8	Aslfalah 2018 [98]	30328246	Same population examined in Aslfalah 2018-adiponectin
9	Dolatkhah 2015 [99]	26825666	No markers of oxidative stress were assessed
10	Li, Q., & Xing, B. 2016 [100]	27336154	No markers of oxidative stress were assessed
11	Valizadeh, M. 2016 [101]	27679649	Outcomes were measured 6-12 weeks post-partum rather than during pregnancy.
12	Liang HY [102]	19620065	Article is written in non-European language (Chinese)
13	Jafarnejad 2016 [103]	27429803	No markers of oxidative stress were assessed
14	Zhang 2016 [19]	27588106	SD of the outcomes was not provided specifically and could only be speculated by the graphs.

Table S2. SUCRA values of different antibiotic treatments for the primary and secondary outcomes.

Rank	SUCRA Δ TAC	SUCRA Δ MDA	SUCRA TAC	SUCRA MDA	SUCRA Δ GSH	SUCRA GSH
1	Ω -3 + VIT E (95.5)	Ω -3 (66.5)	Ω -3 + VIT E (96.4)	VIT C (100)	SOY (85)	VIT C (97.8)

Figure S1: Leave one out analysis for the baseline values of A) TAC and B) MDA, investigating the influence of each individual study on the overall meta-analysis summary estimate.

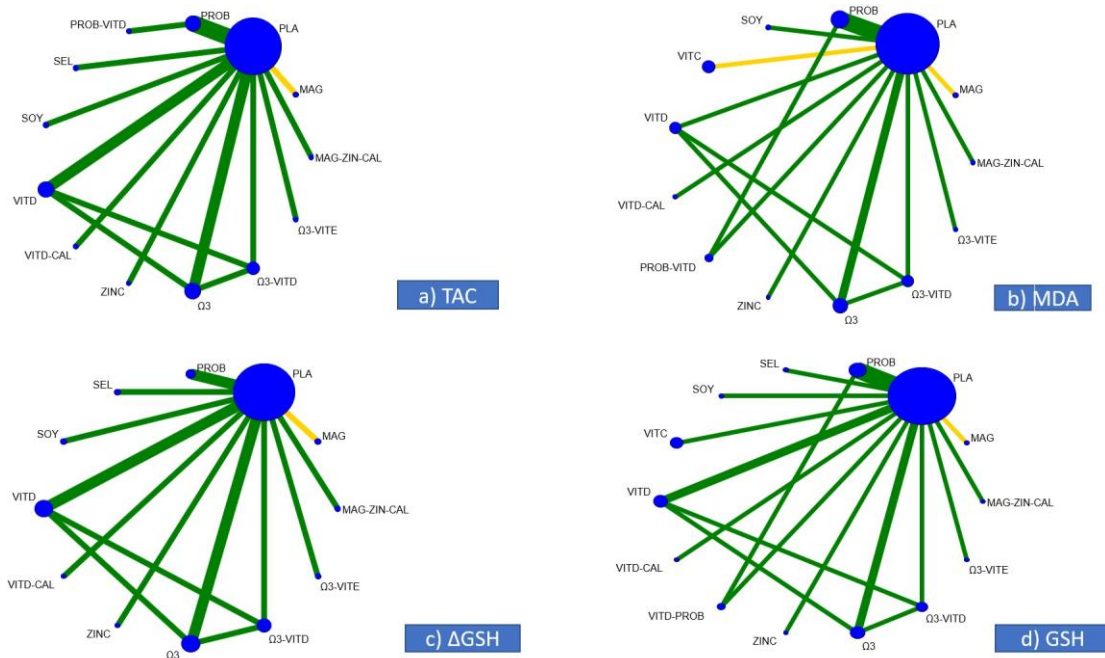

Figure S2: Network plots for the secondary outcomes of A) TAC B) MDA, C) Δ GSH, D) GSH. Treatments are represented by nodes and head-to-head comparisons with edges. The size of the nodes is proportional to the number of the patients, while the thickness of the edges is proportional to the number of studies. The color of the edges represents the average risk of bias for each head-to-head comparison, green for low risk of bias, yellow for uncertain risk of bias, and red for high risk of bias.

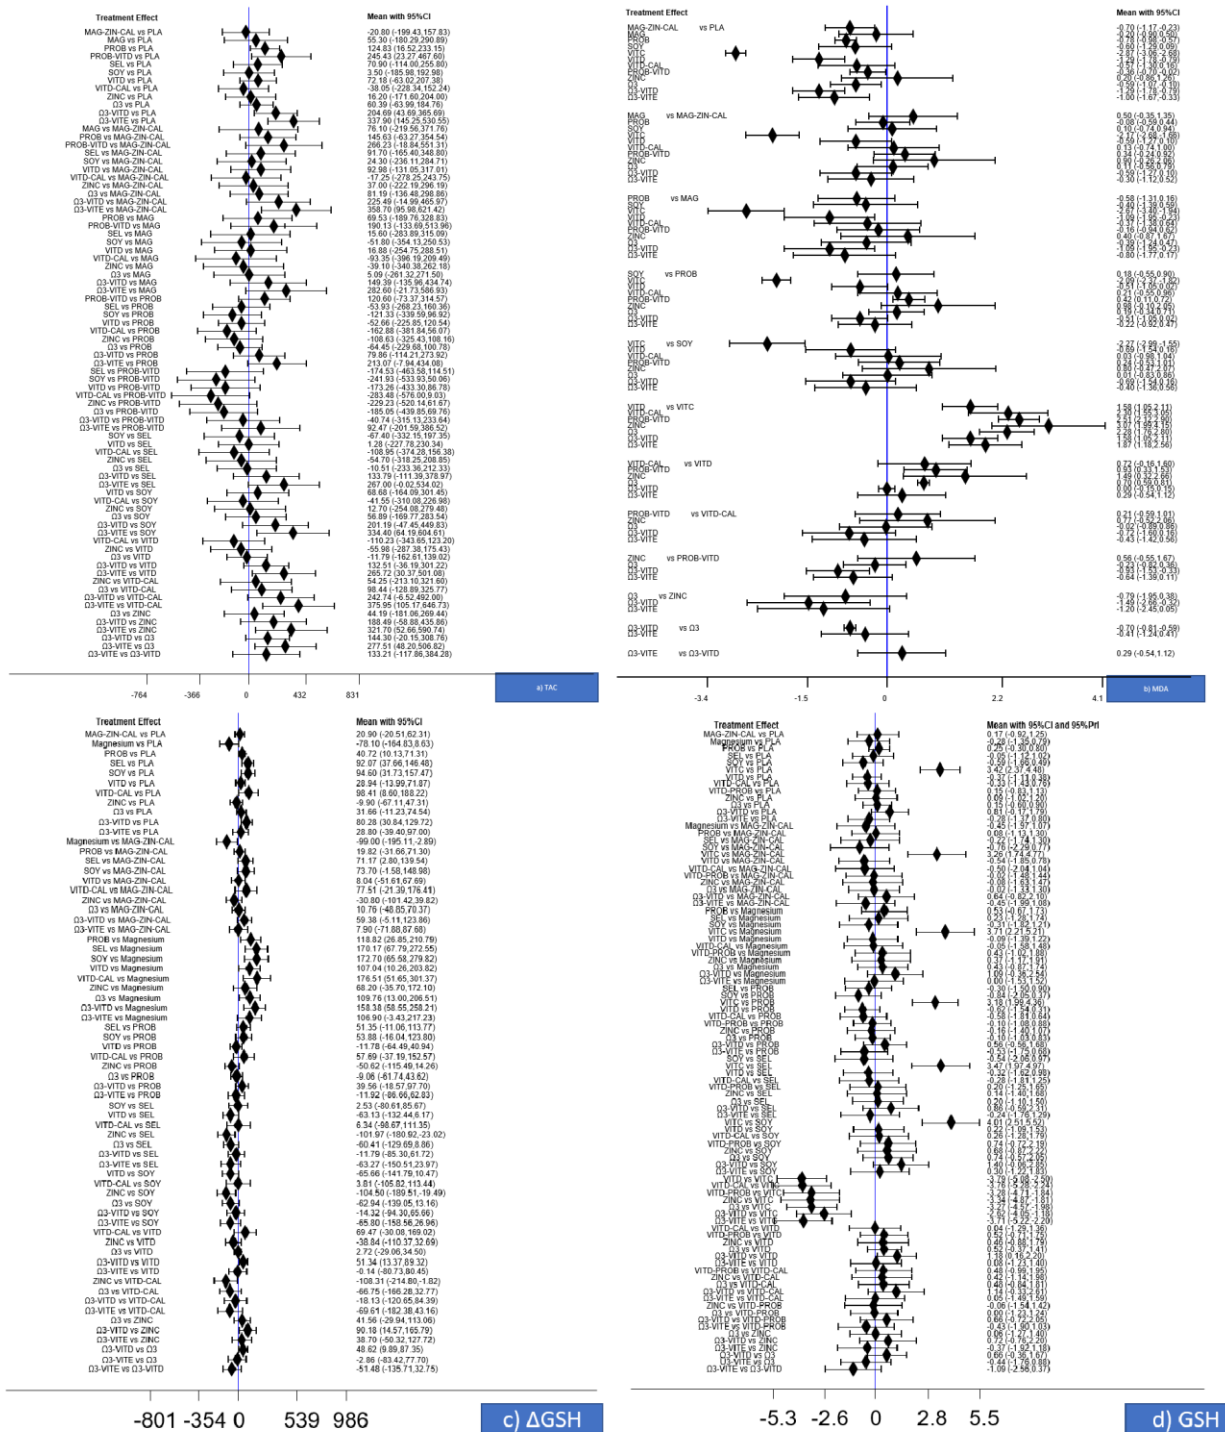

Figure S3: Mean difference (MD) for A) TAC, B) MDA, C) ΔGSH and D) GSH as estimated from the network meta-analysis for every possible pair of interventions. Solid lines represent 95% Confidence Intervals (Cis)

Figure S4: The contributions of direct and indirect data to the network estimate.

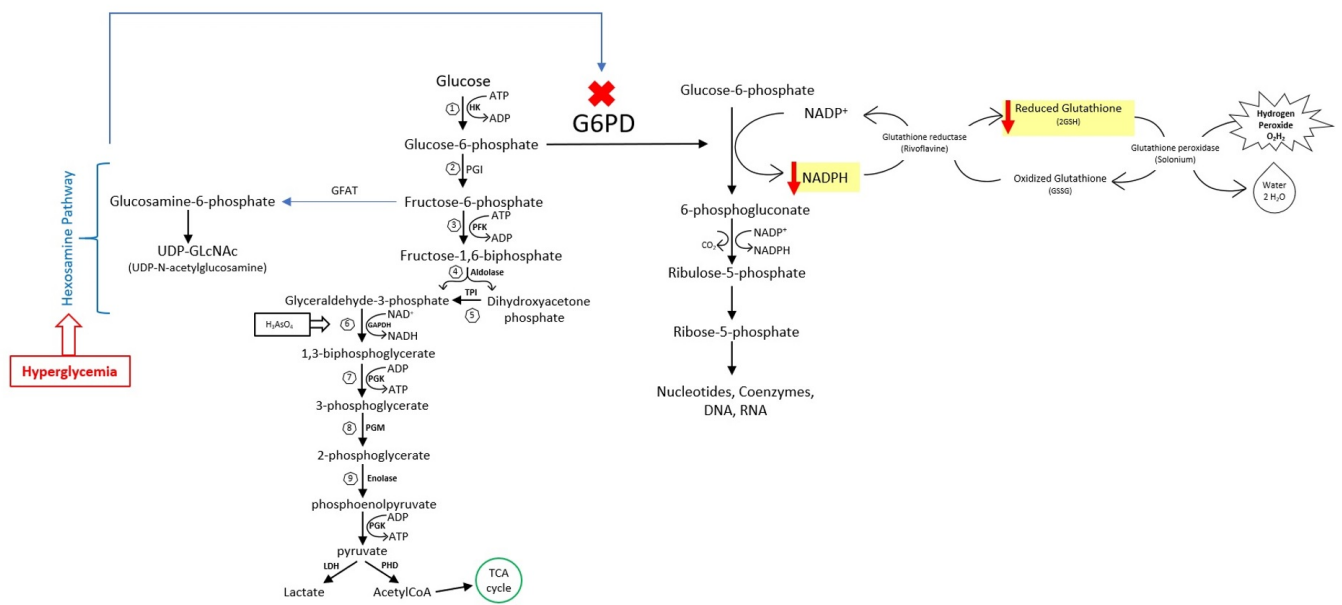

Figure S5: Pathophysiology between hyperglycemia and impairment of antioxidant mechanisms
