

Figure S1. Effect of cranberry juice (CJ) treatment on procaspase-9 expression. Top panel shows a representative immunoblots. Graphs show relative expression \pm SEM of procaspase-9 normalized to GAPDH in the midbrain of rotenone (ROT) injected rats ($n = 8/\text{group}$). Data were analyzed using one-way ANOVA followed by Fischer's LSD multiple comparisons test. * $p < 0.05$ vs. control; *** $p < 0.001$ vs. control; # $p < 0.05$ vs. ROT.
