

Supplementary Materials

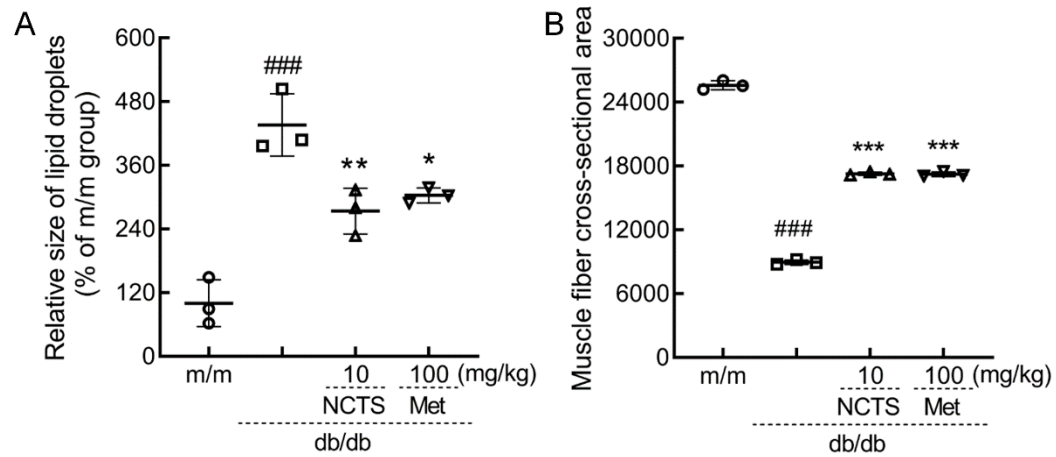

Figure S1. (A) The relative size of lipid droplets and (B) quantification of the muscle fiber cross-sectional areas, according to representative hematoxylin and eosin (H&E) staining results in Figure 2D ($n = 3$). Data are presented as the mean \pm S.D. and analyzed via a one-way ANOVA test followed by post-hoc Tukey's multiple comparison tests. ### $p < 0.001$ vs. vehicle-treated m/m mice; * $p < 0.05$, ** $p < 0.01$ and *** $p < 0.001$ vs. vehicle-treated db/db mice.
