Data reported as estimated marginal means ± SEM or 95% CI following linear mixed model using multiple imputed data. All analyses were statistically adjusted for baseline measurements. BMI, body mass index; WHR, waist-hip ratio; SBP, systolic blood pressure; DBP, diastolic blood pressure; FM, fat mass; FFM, fat free mass; Total-C, total cholesterol; HDL-C, high density lipoprotein cholesterol; Total: HDL-C, Total-to-HDL cholesterol ratio; LDL-C, low density lipoprotein cholesterol; Trig, triglycerides; NEFA, non-esterified fatty acids; GIP, gastric inhibitory polypeptide; GLP-1, glucagon-like peptide-1; PYY, peptide YY.

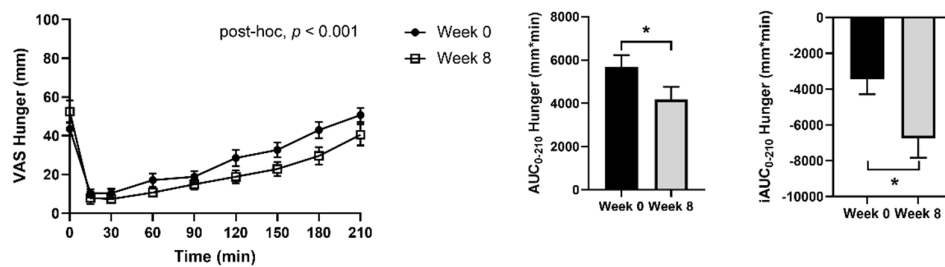

(A) HPLC

(B) HPNC

(C) NPLC

(D) NPNC

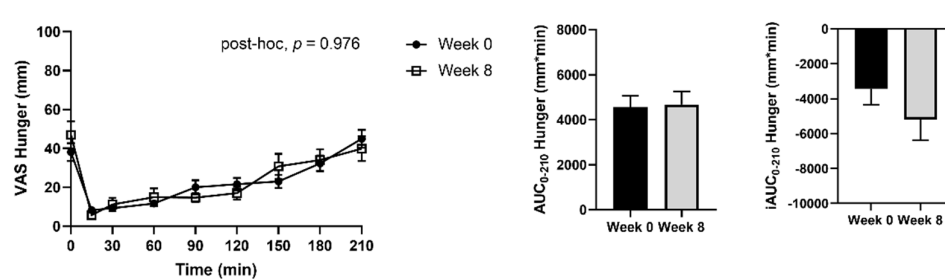

Figure S1. Observed mean (\pm SEM) VAS Hunger for $t = 0 - 210$ min, AUC₀₋₂₁₀ and iAUC₀₋₂₁₀ following (A) HPLC, (B) HPNC, (C) NPLC, and (D) NPNC. Number of participants completed appetite VAS at Week 0 and Week 8 following HPLC were $n = 31$ and 23, HPNC were $n = 29$ and 23, NPLC were $n = 31$ and 27, and NPNC were $n = 30$ and 18. Observed repeated measures data ($t = 0 - 210$ min) were analysed using a linear mixed model, adjusted for differences in fasted ratings ($t = 0$ min). Post-hoc analysis shows the statistically significant difference in postprandial appetite responses between Week 0 and Week 8. AUC₀₋₂₁₀ and iAUC₀₋₂₁₀ between Week 0 and Week 8 were compared using mixed model ANOVA, * $p < 0.05$, ** $p < 0.01$.

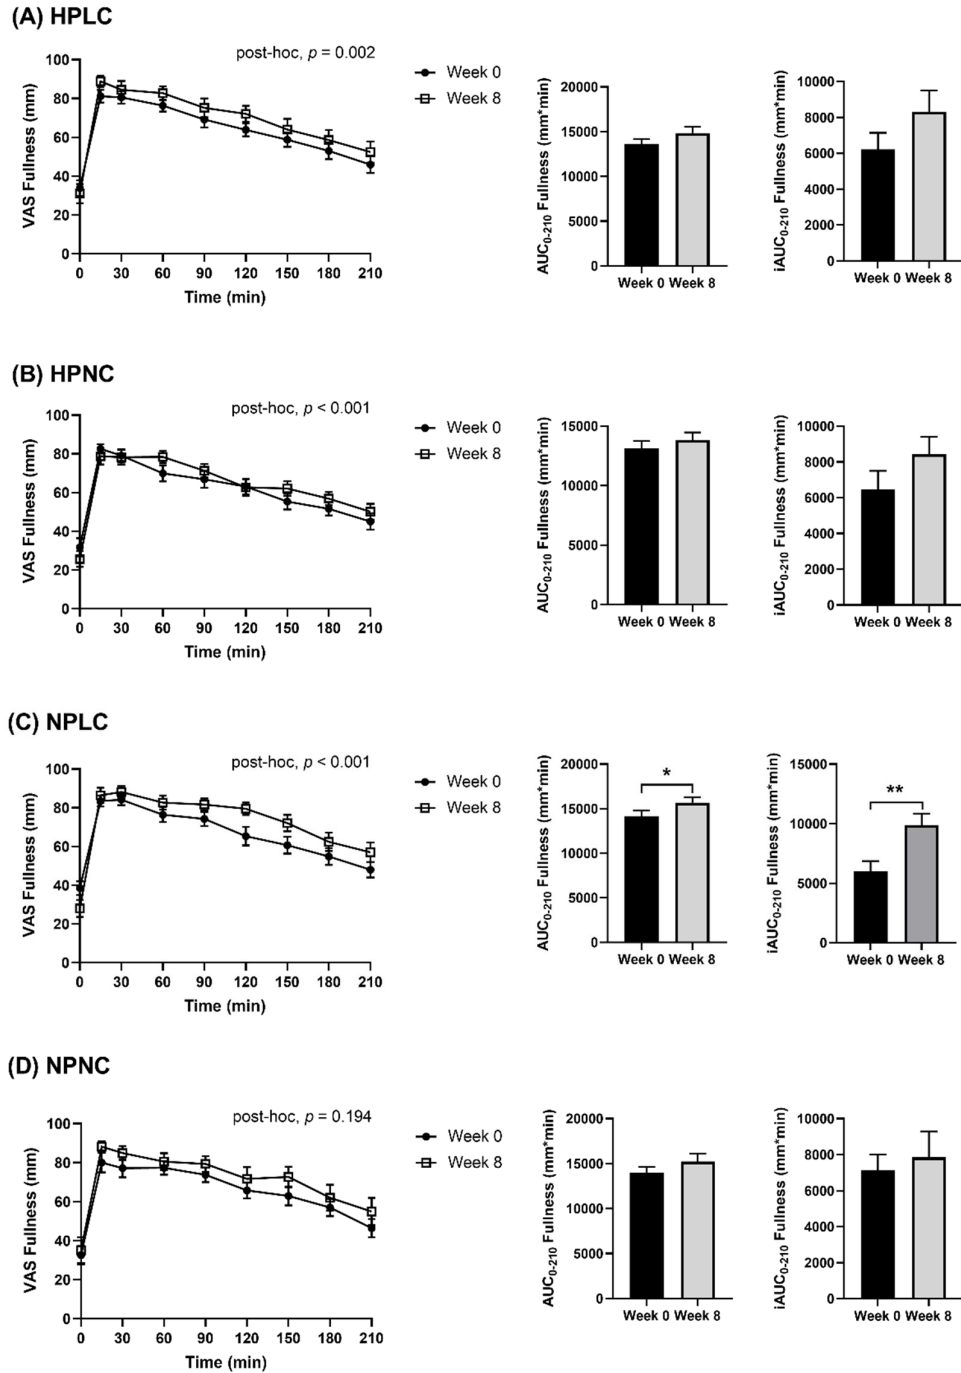

Figure S2. Observed mean (\pm SEM) VAS Fullness for $t = 0 - 210$ min, AUC₀₋₂₁₀ and iAUC₀₋₂₁₀ following (A) HPLC, (B) HPNC, (C) NPLC, and (D) NPNC. Number of participants completed appetite VAS at Week 0 and Week 8 following HPLC were $n = 31$ and 23 , HPNC were $n = 29$ and 23 , NPLC were $n = 31$ and 27 , and NPNC were $n = 30$ and 18 . Observed repeated measures data ($t = 0 - 210$ min) were analysed using a linear mixed model, adjusted for differences in fasted ratings ($t = 0$ min). Post-hoc analysis shows the statistically significant difference in postprandial appetite responses between Week 0 and Week 8. AUC₀₋₂₁₀ and iAUC₀₋₂₁₀ between Week 0 and Week 8 were compared using mixed model ANOVA, * $p < 0.05$, ** $p < 0.01$.

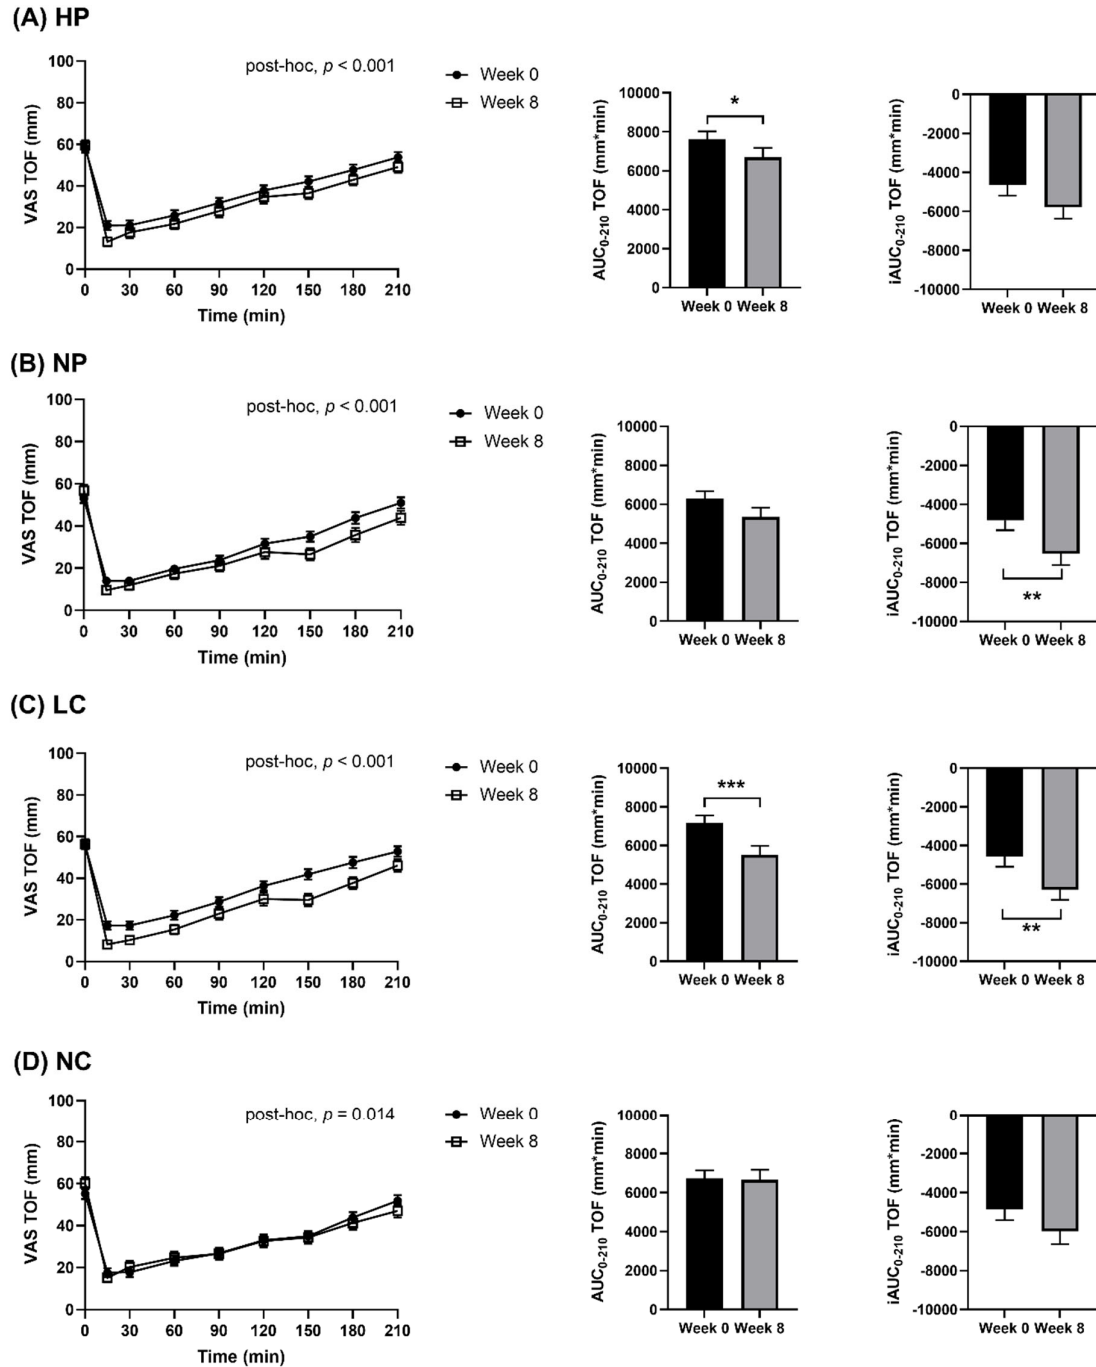

Figure S3. Observed mean (\pm SEM) VAS TOF for $t = 0 - 210$ min, AUC₀₋₂₁₀ and iAUC₀₋₂₁₀ following (A) HP, (B) NP, (C) LC, and (D) NC. Number of participants completed appetite VAS at Week 0 and Week 8 following HP were $n = 60$ and 46 , NP were $n = 61$ and 45 , LC were $n = 62$ and 50 , and NC were $n = 59$ and 41 . Observed repeated measures data ($t = 0 - 210$ min) were analysed using a linear mixed model, adjusted for differences in fasted ratings ($t = 0$ min). Post-hoc analysis shows the statistically significant difference in postprandial appetite responses between Week 0 and Week 8. AUC₀₋₂₁₀ and iAUC₀₋₂₁₀ between Week 0 and Week 8 were compared using mixed model ANOVA, * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$, Thoughts of Food.

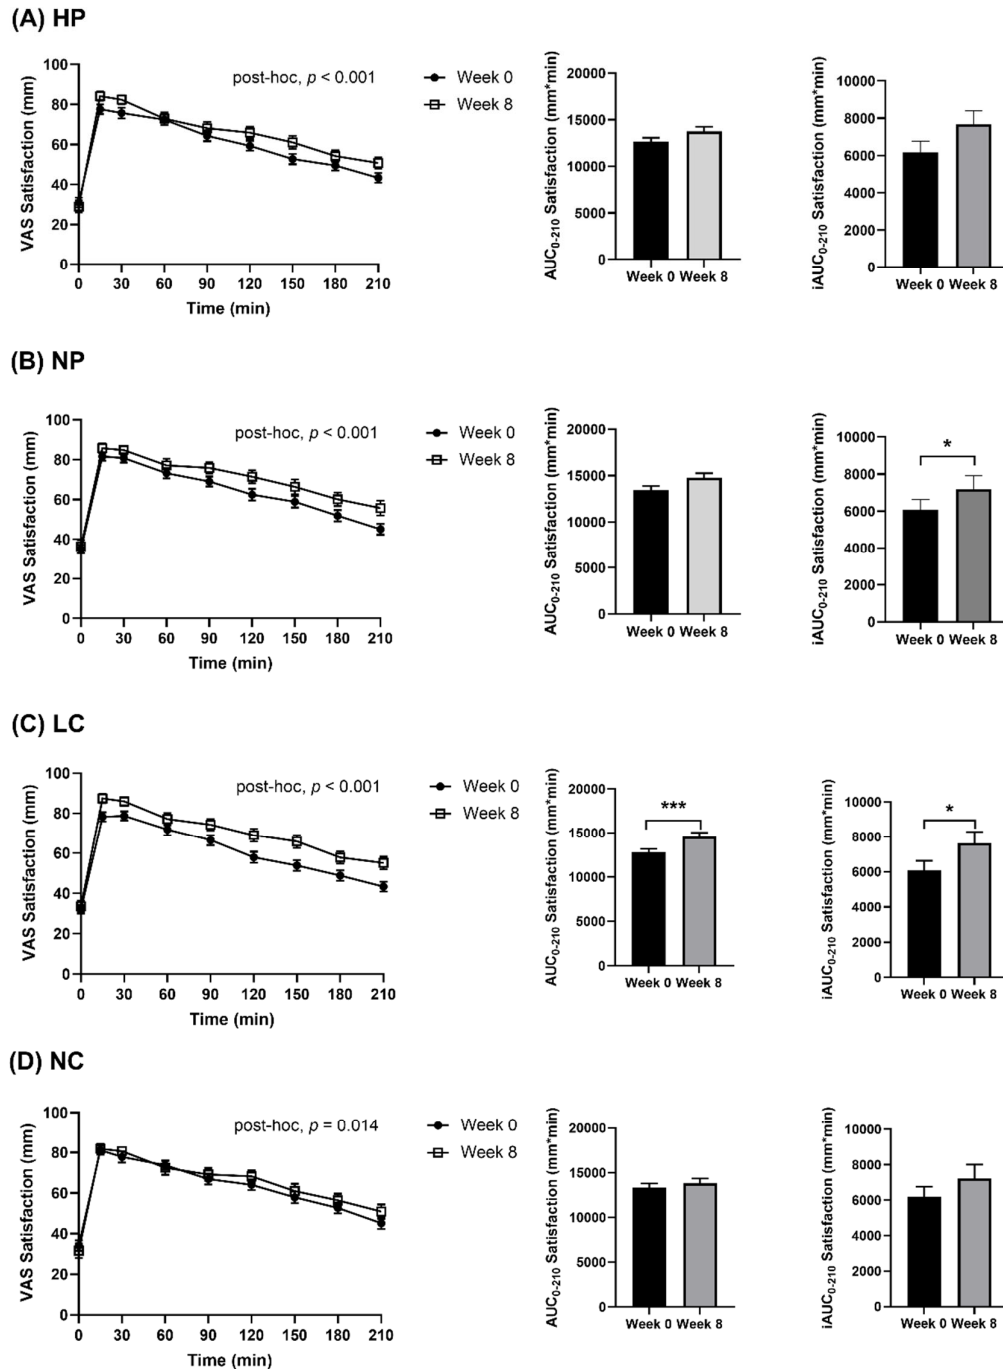

Figure S4. Observed mean (\pm SEM) VAS Satisfaction for $t = 0 - 210$ min, AUC₀₋₂₁₀ and iAUC₀₋₂₁₀ following (A) HP, (B) NP, (C) LC, and (D) NC. Number of participants completed appetite VAS at Week 0 and Week 8 following HP were $n = 60$ and 46 , NP were $n = 61$ and 45 , LC were $n = 62$ and 50 , and NC were $n = 59$ and 41 . Observed repeated measures data ($t = 0 - 210$ min) were analysed using a linear mixed model, adjusted for differences in fasted ratings ($t = 0$ min). Post-hoc analysis shows the statistically significant difference in postprandial appetite responses between Week 0 and Week 8. AUC₀₋₂₁₀ and iAUC₀₋₂₁₀ between Week 0 and Week 8 were compared using mixed model ANOVA, * $p < 0.05$, *** $p < 0.001$.

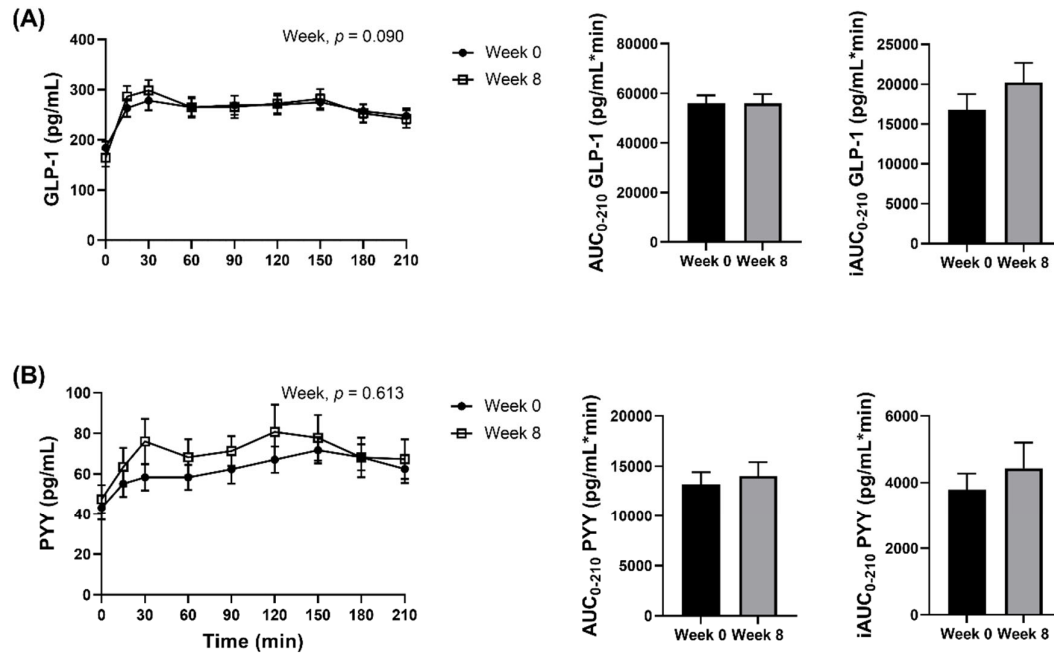

Figure S5. Observed mean (\pm SEM) concentrations of (A) GLP-1 and (B) PYY for $t = 0 - 210$ min, AUC_{0-210} , and $iAUC_{0-210}$, presented as all dietary groups combined. Number of participants completed the repeated blood samplings procedure at Week 0 and Week 8 were $n = 42$ and $n = 32$, respectively. Observed cases data were analysed using a linear mixed model, adjusted for differences in fasted concentrations ($t = 0$ min). AUC_{0-210} and $iAUC_{0-210}$ between Week 0 and Week 8 were compared using mixed model ANOVA.
