| Σ MUFA | 25.91 | 51.35 | 9.82 | 22.64 |
| Σ PUFA | 46.22 | 29.25 | 4.47 | 64.89 |

Indices of nutritional quality

| | | | | |
|--|------|------|------|-------|
| Atherogenic index (AI) | 0.22 | 0.10 | 9.16 | 0.07 |
| Thrombogenic index (TI) | 0.50 | 0.33 | 3.79 | 0.06 |
| Hypocholesterolemic:hypercholesterolemic (HH) | 4.72 | 9.85 | 0.25 | 14.46 |

Σ: Sum symbol; SFA: Saturated fatty acids; MUFA: Monounsaturated fatty acids; PUFA: polyunsaturated fatty acids. SO: Soybean oil; BO: Baru oil; CO: coconut oil; LO: linseed oil.

Table S2. Quality properties and totals carotenoids of soybean, coconut, linseed, and baru oils.

| Parameter | SO | CO | LO | BO |
|---|----------------------------|-----------------------------|----------------------------|-----------------------------|
| Carotenoids (µg/g) | 15.13 ± 0.62 ^b | 1.43 ± 0.18 ^{c*} | 24.37 ± 1.12 ^{a*} | 2.35 ± 0.03 ^{c*} |
| Acidity index (mg KOHg ⁻¹) | 1.75 ± 0.00 ^b | 1.01 ± 0.19 ^b | 23.67 ± 0.76 ^{a*} | 1.31 ± 0.21 ^b |
| Peroxide index (meqO ₂ kg ⁻¹) | 7.90 ± 0.09 ^b | 2.65± 0.00 ^c | 7.27 ± 0.92 ^b | 15.77 ± 0.17 ^a |
| Saponification index (mg KOH g ⁻¹) | 187.85 ± 4.88 ^b | 247.04 ± 3.78 ^{a*} | 199.08 ± 0.56 ^b | 189.90 ± 10.36 ^b |
| Iodine index (g I ₂ 100 ⁻¹ g) | 150.66±2.33 ^a | 23.62±3.49 ^{b*} | 157.90±6.92 ^a | 115.20±0.28 ^a |
| Refraction index at 20 °C | 1.473 ± 0.00 ^a | 1.456 ± 0.00 ^{b*} | 1.477 ± 0.00 ^{b†} | 1.469 ± 0.00 ^{b†} |

SO: soybean oil; BO: Baru oil; CO: coconut oil; LO: linseed oil. Note: Values expressed as mean ± SD. Different letters in the same line represent statistical differences ($p < 0.05$), being that † represent a very significant difference ($p < 0.01$) and * represent a strong significant difference statistical ($p < 0.0001$) by one-way ANOVA followed by Tukey test.

Table S3. Distribution of changes observed on liver tissue of the animals after 60 days of treatment.

| Variables | SG | CG | LG | BG | p value(a) |
|---------------------------------|-------------|----------------|---------------|---------------|---------------|
| Apoptosis | | | | | |
| Absent | 91.7 (11) | 75.0 (9) | 75.0 (9) | 83.3 (10) | 0,68 |

| No observations (b) | 41.7 (5) | 66.7 (8) | 66.7 (8) | 66.7 (8) | |

SG: Soybean group; CG: Coconut group; LG: Linseed group; BG: Baru group. (a) Chi-square test with Bonferroni correction; (b) Values not considered in the statistical analysis; In Mallory's Hyaline variable, among those present, only the control group presented several observations, the others only rare. Data presented as relative frequency (absolute frequency). *Statistical association.

Table S4. ^1H (500 MHz) and ^{13}C (125 MHz) NMR chemical shifts, multiplicities and coupling constants (J) of the assigned compounds from mouse serum samples fed with animal food containing baru, coconut, linseed, and soybean oils.

| Compound | Assignment | ^1H NMR chemical shift (ppm); multiplicity (J , in Hz) | ^{13}C NMR chemical shift (ppm) |
|--------------------------|-------------------------------------|--|--|
| Alanine | CH_3 | 1.48; d (7.2) | 18.8 |
| | CH | 3.76; q (7.2) | 53.2 |
| β -hidroxibutirate | CH_3 | 1.20; d (6.3) | 24.4 |

| | C6H | 7.25 | - |
| Formate | HCOO- | 8.45; s | - |

*s: singlet, bs: broad singlet, d: doublet, t: triplet, q: quartet, m: multiplet.

**: signal used for the relative proportion determination.

^a unidentified (probably CH₂ signal from triacylglycerol).

Supplementary Figures:

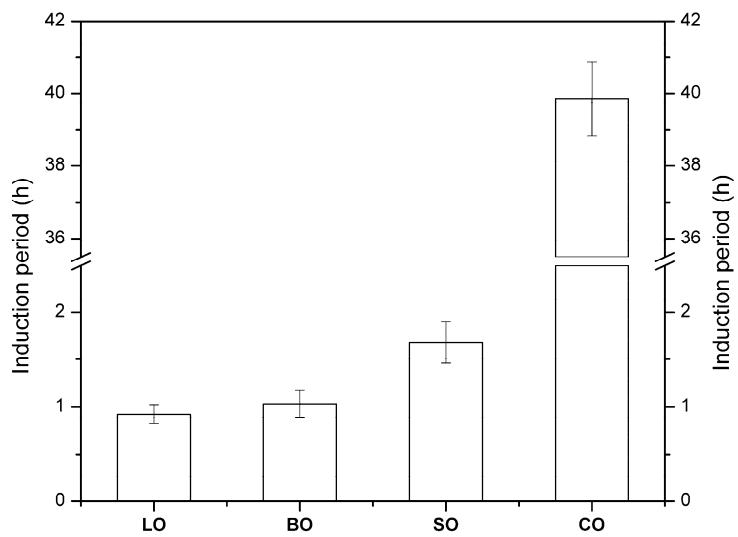

Figure S1. Induction period of soybean (SO), linseed (LO), coconut (CO) and baru (BO) oils.

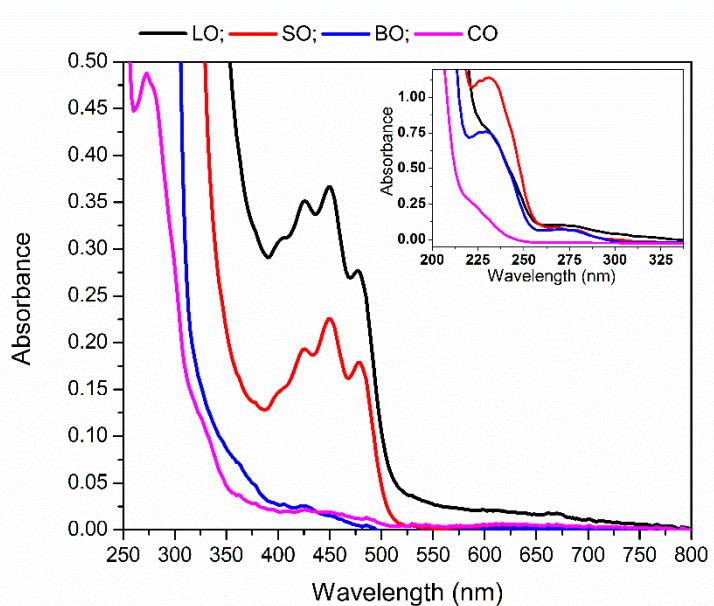

Figure S2. UV-Vis absorption spectra of vegetable oils diluted at 50% (v/v) in hexane. Inset shows the absorption spectra collected from high-diluted samples, which the soybean (SO), linseed (LO), coconut (CO) and baru (BO) oils were diluted at 0.13% (v/v) in hexane.

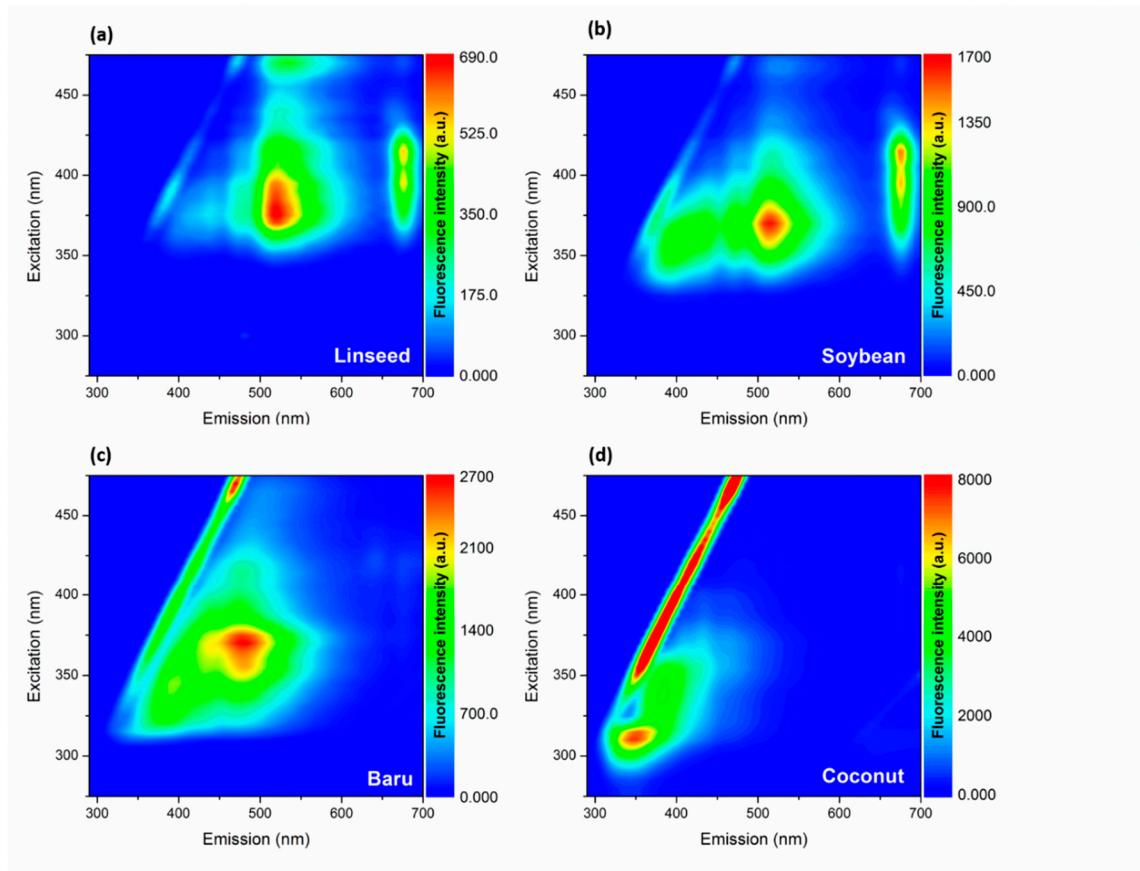

Figure S3. Fluorescence excitation-emission matrix of (a) LO, (b) SO, (c) BO, and (d) CO.

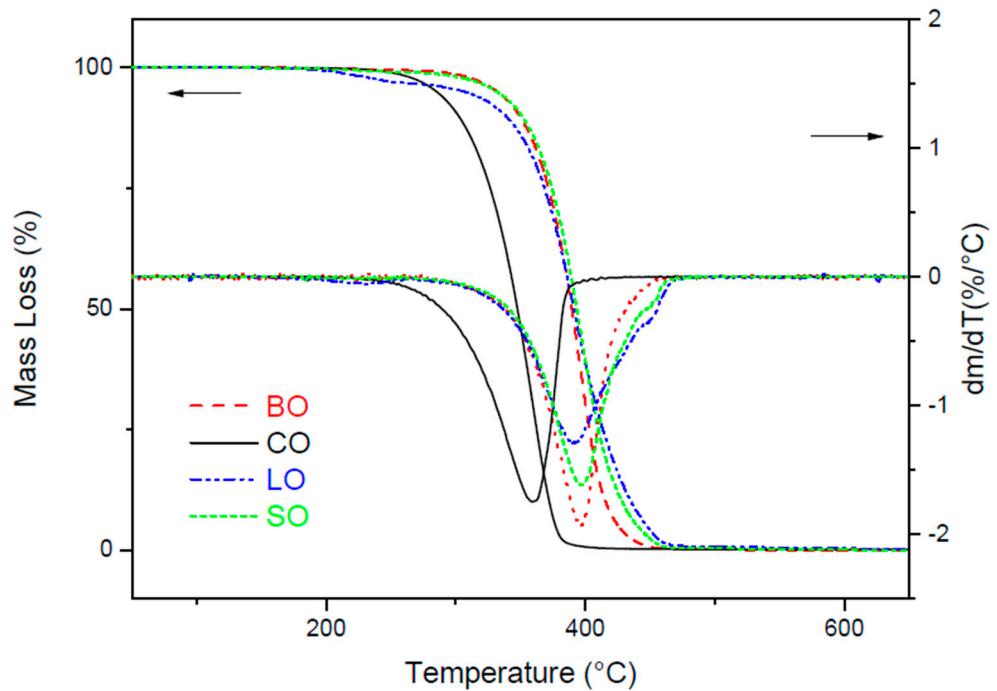

Figure S4. Thermal decomposition of BO (baru oil), CO (coconut oil), LO (linseed oil), and SO (soybean oil).

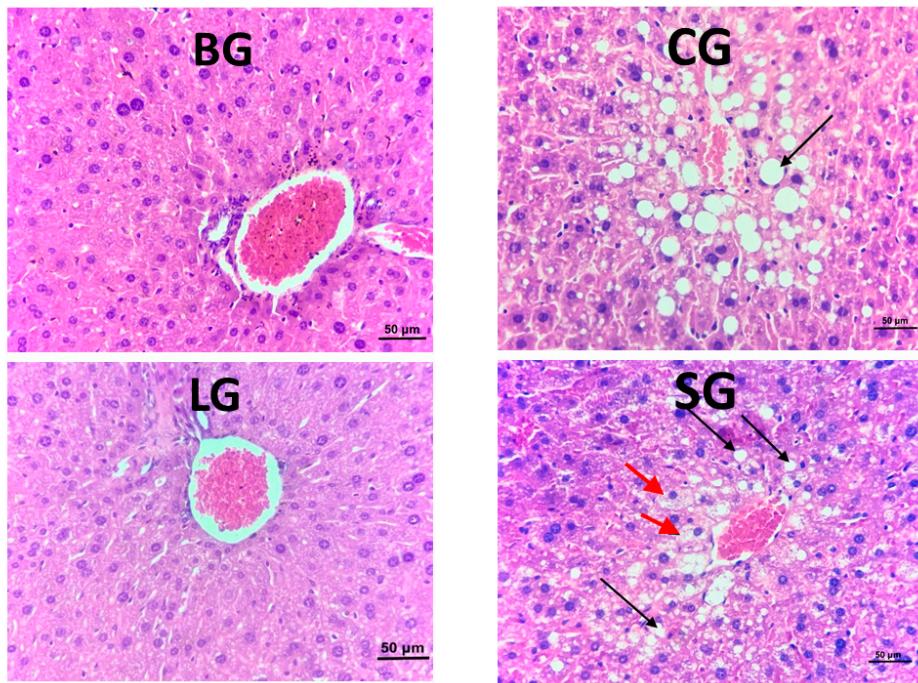

Figure S5. Histological analysis of liver tissue from mice. High magnification (400x) photomicrograph, Hematoxylin and eosin stained slides (black arrows indicate macrogoticular steatosis and red arrows indicate hepatocellular ballooning). BG: Baru group; CG: Coconut group; LG: Linseed group; SG: Soybean group. Bar scale: 50μm.

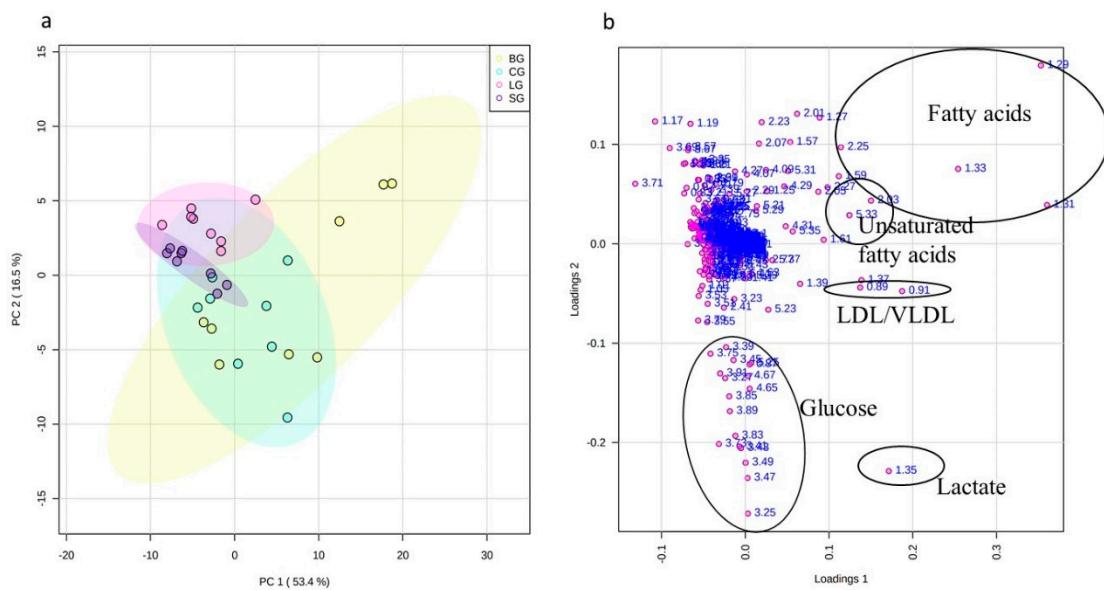

Figure S6. PCA scores (a) and loading (b) plots from ^1H NMR spectra (NOESYGPPR1D) of the serum samples from Swiss mice fed diets based on baru, coconut, linseed, and

soybean (a,b) and after removal of baru group (c,d) . Legend: baru (BG), coconut (CG), linseed (LG), and soybean oil (SG) groups.
