

Figure S1. Nutritional composition: **(A)** protein content and **(B)** fat content in the three replications of five maize varieties collected from Golegā and Coruche region. The absence of common letters reveals significant differences at $p < 0.05$, and Tukey's multiple range tests were performed for each year separately. * indicates a significant difference at $p < 0.05$ between the two harvesting regions.

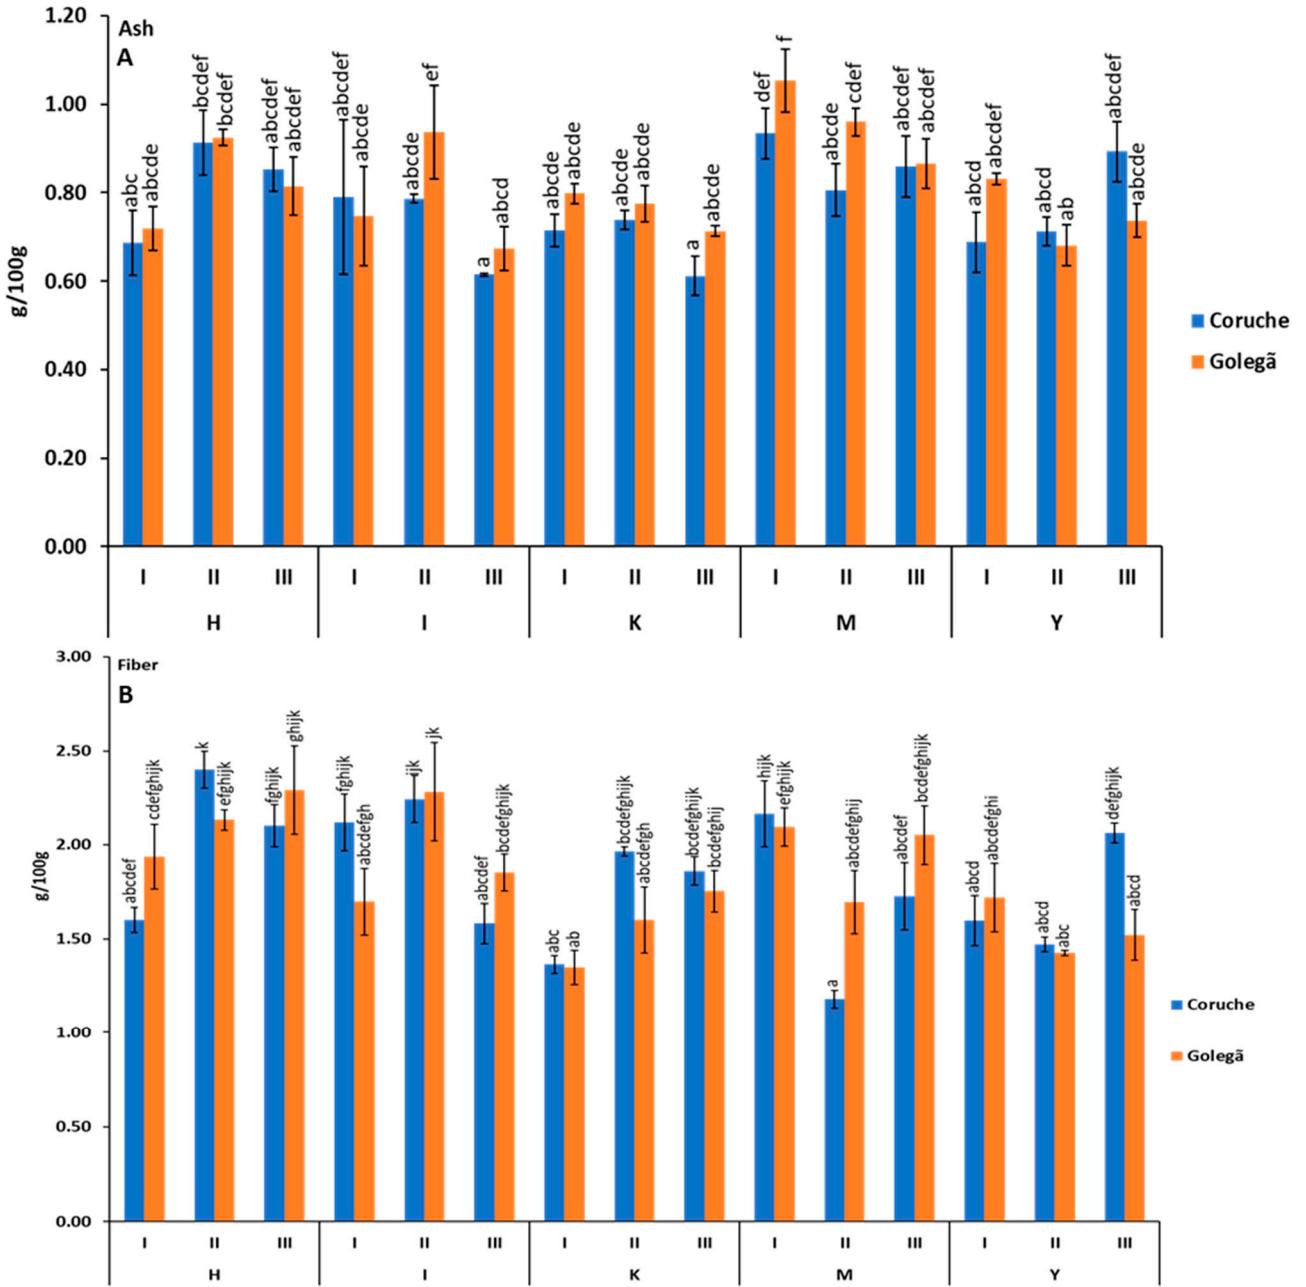

Figure S2. Nutritional composition: **(A)** ash content and **(B)** fiber content in the three replications of five maize varieties collected from Golegā and Coruche region. The absence of common letters reveals significant differences at $p < 0.05$, and Tukey's multiple range tests were performed for each year separately.

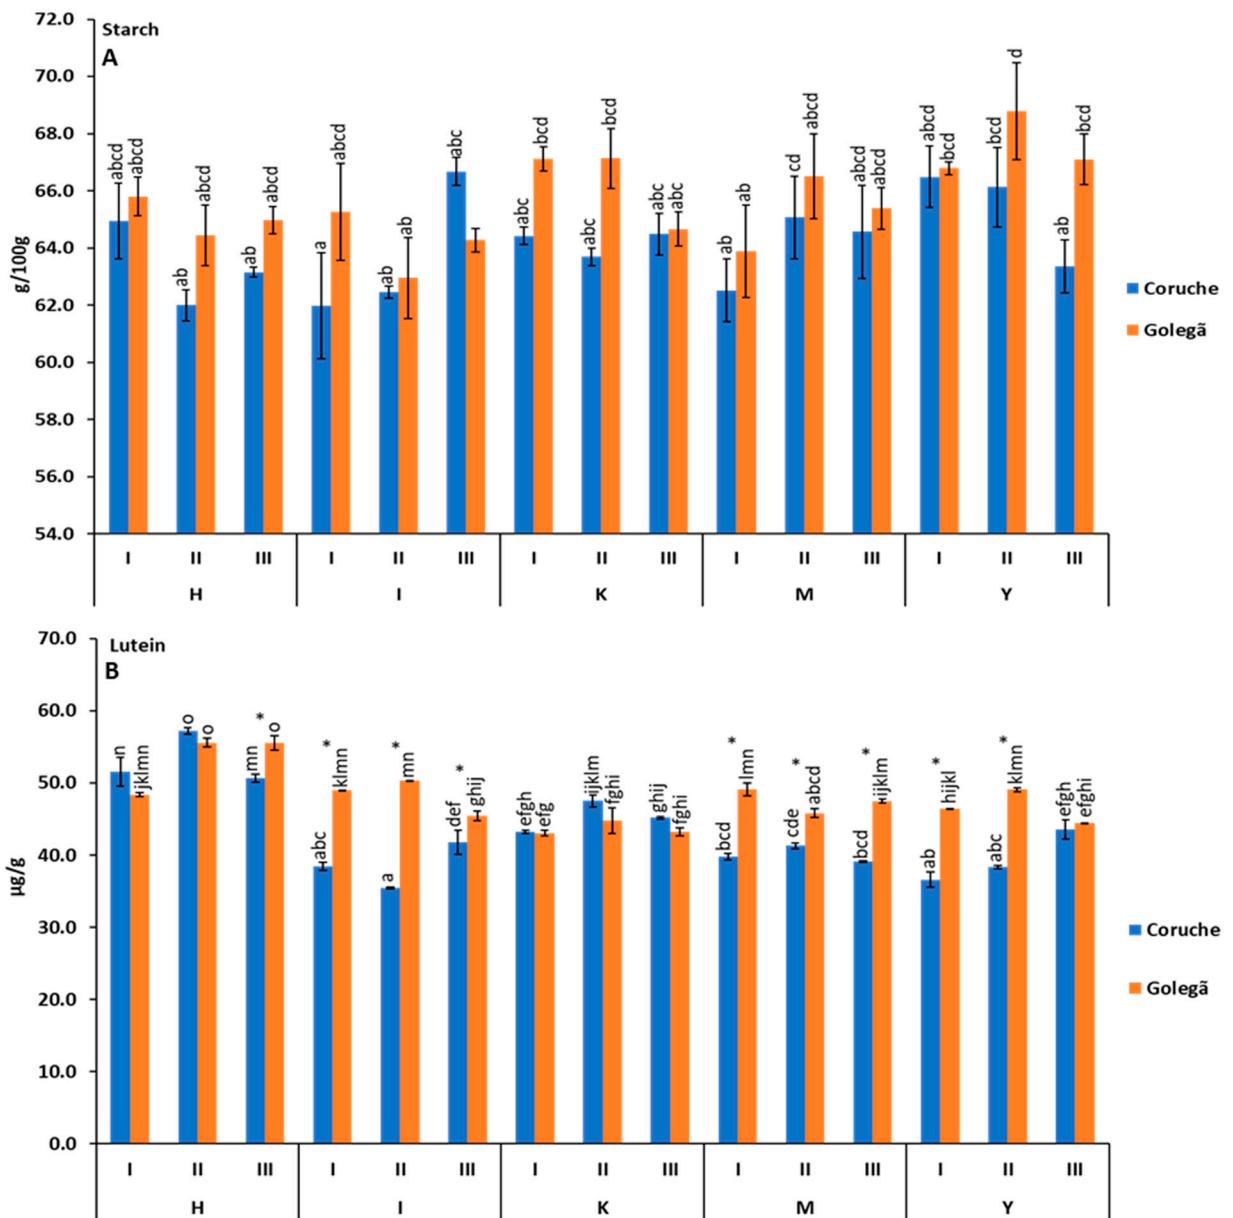

Figure S3. Nutritional composition: **(A)** starch content and **(B)** lutein content in the three replications of five maize varieties collected from Golegã and Coruche region. The absence of common letters reveals significant differences at $p < 0.05$, and Tukey's multiple range tests were performed for each year separately. * indicates a significant difference at $p < 0.05$ between the two harvesting regions.

Table S1. RVA (rapid visco analyzer) parameters in the three replications of five maize varieties harvested from the Coruche and Golegā regions

		Peak Viscosity (PV)		Trough (Holding Strength) (HS)		Breakdown Viscosity (BD)		Final Viscosity (FV)		Pasting Temperature (PT)		Setback Viscosity (SB)	
		Coruche	Golegā	Couche	Golegā	Coruche	Golegā	Coruche	Golegā	Coruche	Golegā	Coruche	Golegā
