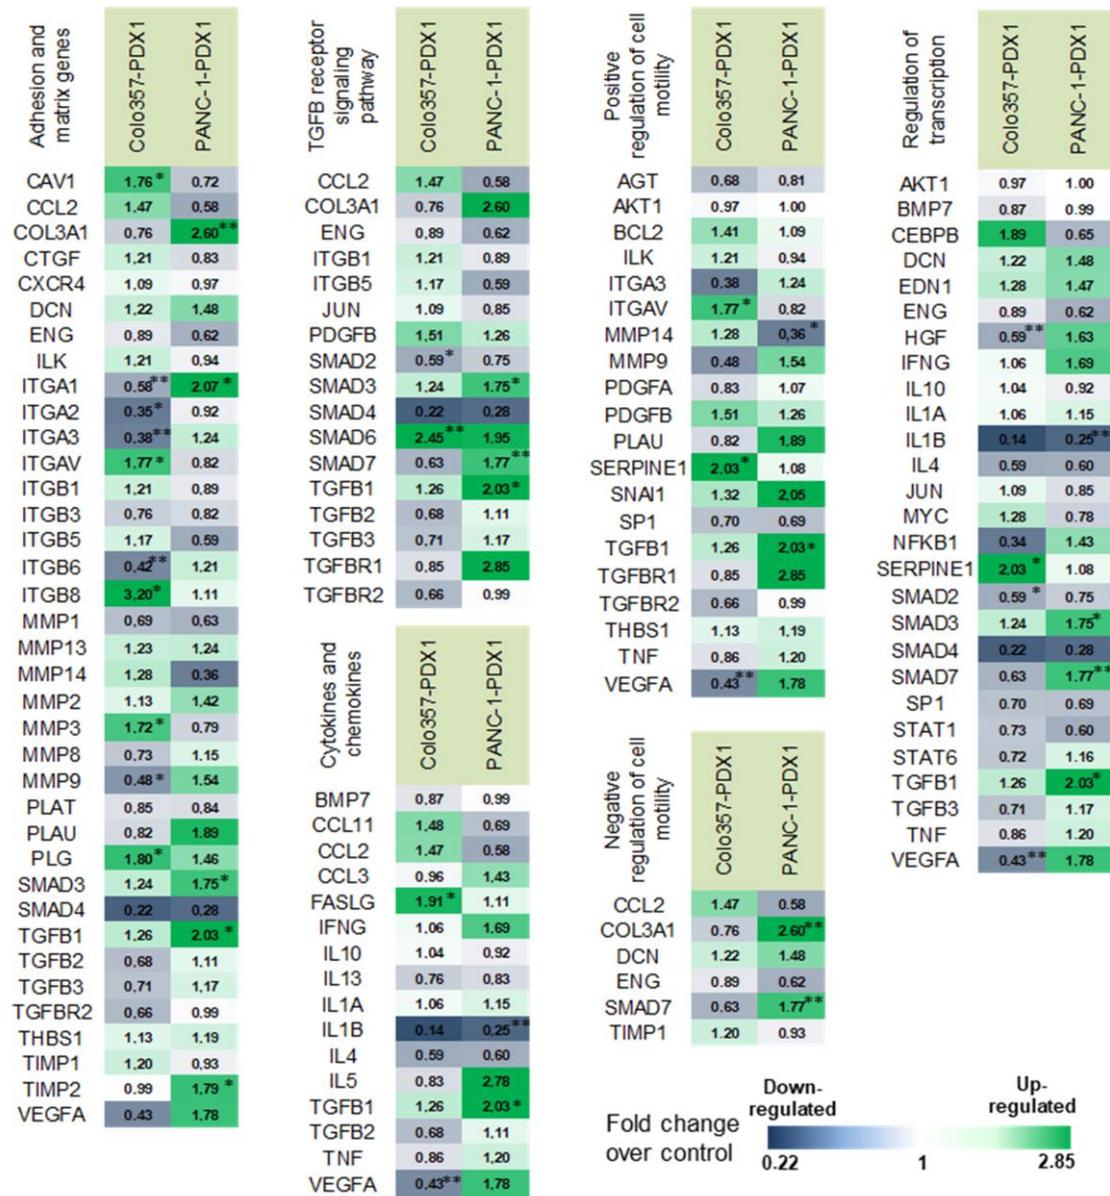

Figure S1. The heatmap of relative motility genes expression. The fold change expression of 5 groups of genes from the RT2 Profiler PCR Array "Cell Motility" in Colo357-PDX1 over Colo357-Control and PANC-1-PDX1 over PANC-1-Control cells. Green - increased expression level over control, blue - decreased level. The data are shown as the mean of relative expression (n=3). *p < 0.05, **p < 0.01, Manna-Whitney test.
