Significance of Lauren Classification in Patients Undergoing Neoadjuvant/Perioperative Chemotherapy for Locally Advanced Gastric or Gastroesophageal Junction Cancers – Analysis from a Large Single Center Cohort in Germany

Rebekka Schirren, Alexander Novotny, Christian Oesterlin, Julia Slotta-Huspenina, Helmut Friess and Daniel Reim

Figure S1: Love plot for propensity-score matching of confounding variables within the respective Lauren type subgroups.

Figure S2. Kaplan Meier curve for OS in UICC stage I of PSM-cohort.

Figure S3. Kaplan Meier curve for OS in UICC stage II of PSM-cohort.

Figure S4. Kaplan Meier curve for OS in UICC stage III of PSM-cohort.

15 % of AGC benefit from neoadjuvant/perioperative CTx

Figure S5. From 331 patients only 49 (15%) revealed histopathologic response and thus survival benefit.
