

The effect of intraocular pressure-lowering medication on metastatic uveal melanomas

Contents

- TABLE S1: Baseline characteristics of choroidal melanoma patients for those using prostaglandins/pilocarpines and controls included from 1996 onwards. Presented as mean±standard deviation unless stated otherwise.
- TABLE S2: Baseline characteristics of choroidal melanoma patients for those using beta-blockers and controls included from 1986 onwards. Presented as mean±standard deviation unless stated otherwise.
- TABLE S3: Baseline characteristics of choroidal melanoma patients for those using carbonic anhydrase inhibitors and controls included from 1994 onwards. Presented as mean±standard deviation unless stated otherwise.
- TABLE S4: Baseline characteristics of choroidal melanoma patients for those using oral intraocular pressure-lowering medication and controls included from 1986 onwards. Presented as mean±standard deviation unless stated otherwise.
- TABLE S5: Baseline characteristics of uveal melanoma patients for those using prostaglandins/pilocarpines and controls included from 1996 onwards. Presented as mean±standard deviation unless stated otherwise.
- TABLE S6: Baseline characteristics of uveal melanoma patients for those using alpha2-agonists and controls included from 2000 onwards. Presented as mean±standard deviation unless stated otherwise.
- TABLE S7: Baseline characteristics of uveal melanoma patients for those using beta-blockers and controls included from 1986 onwards. Presented as mean±standard deviation unless stated otherwise.
- TABLE S8: Baseline characteristics of uveal melanoma patients for those using carbonic anhydrase inhibitors and controls included from 1994 onwards. Presented as mean±standard deviation unless stated otherwise.
- TABLE S9: Baseline characteristics of uveal melanoma patients for those using oral intraocular pressure-lowering medication and controls included from 1986 onwards. Presented as mean±standard deviation unless stated otherwise.
- TABLE S10: Risk of metastatic choroidal- and uveal melanoma and mortality in patients with a BAP1-mutation for those using prostaglandins/pilocarpines and controls included from 1996 onwards. Presented as hazard ratio with corresponding 95% confidence interval and p-value.
- FIGURE S1: Kaplan-Meier cumulative incidence curve of choroidal- and ciliary body melanoma patients for metastasis (A) and mortality (B).
- FIGURE S2: Kaplan-Meier cumulative incidence curves of metastasis (left) and mortality (right) in choroidal melanoma patients with and without prostaglandin/pilocarpine use (A and B), with and without beta-blocker use (C and D), with and without carbonic anhydrase inhibitor use (E and F), and with and without oral intraocular pressure-lowering medication use (G and H).

TABLE S1. Baseline characteristics of choroidal melanoma patients for those using prostaglandins/pilocarpines and controls included from 1996 onwards. Presented as mean±standard deviation unless stated otherwise.
