

Supplementary materials

Supplementary Figure S1. Covariate Balancing of the Propensity Score matching variables (gender, localization, R-resection status). The upper figure displays the dotplot of standardized mean differences (Cohens's d) in the propensity scores and the covariates of interest before and after matching. The lower figure displays the line plot of standardized differences before and after matching.

Supplemental Figure S2. Flow diagram of the patient database extraction.

Supplemental Table S1. Propensity score balancing data.

Covariates	Means Treated		Means Control		SD Control		Std. Mean Diff.	
	Before	After	Before	After	Before	After	Before	After
Propensity score	0.53	0.50	0.48	0.50	0.11	0.11	0.47	0.00
Female	0.27	0.18	0.18	0.18	0.38	0.39	0.20	0.00
