

Figure S1. Gene tracks of H3K27ac ChIP-seq occupancy at representative HSF1-associated lncRNA gene loci in HCT116 cell.

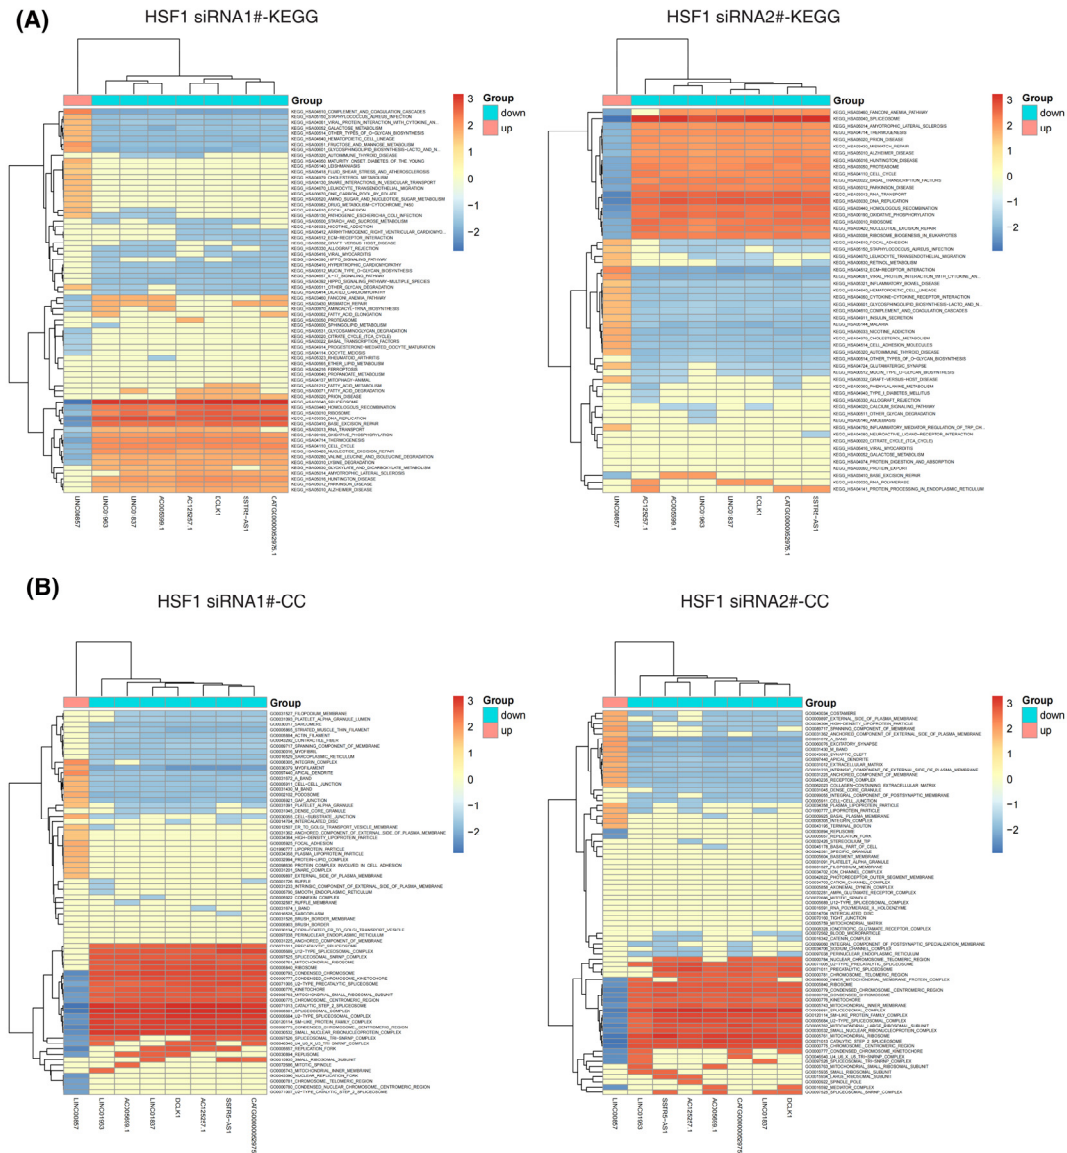

Figure S2. Gene Set Enrichment Analysis (GSEA) on 8 HSF1-associated downregulated lncRNAs. (KEGG: kyoto encyclopedia of genes and genomes, CC: Cellular component).

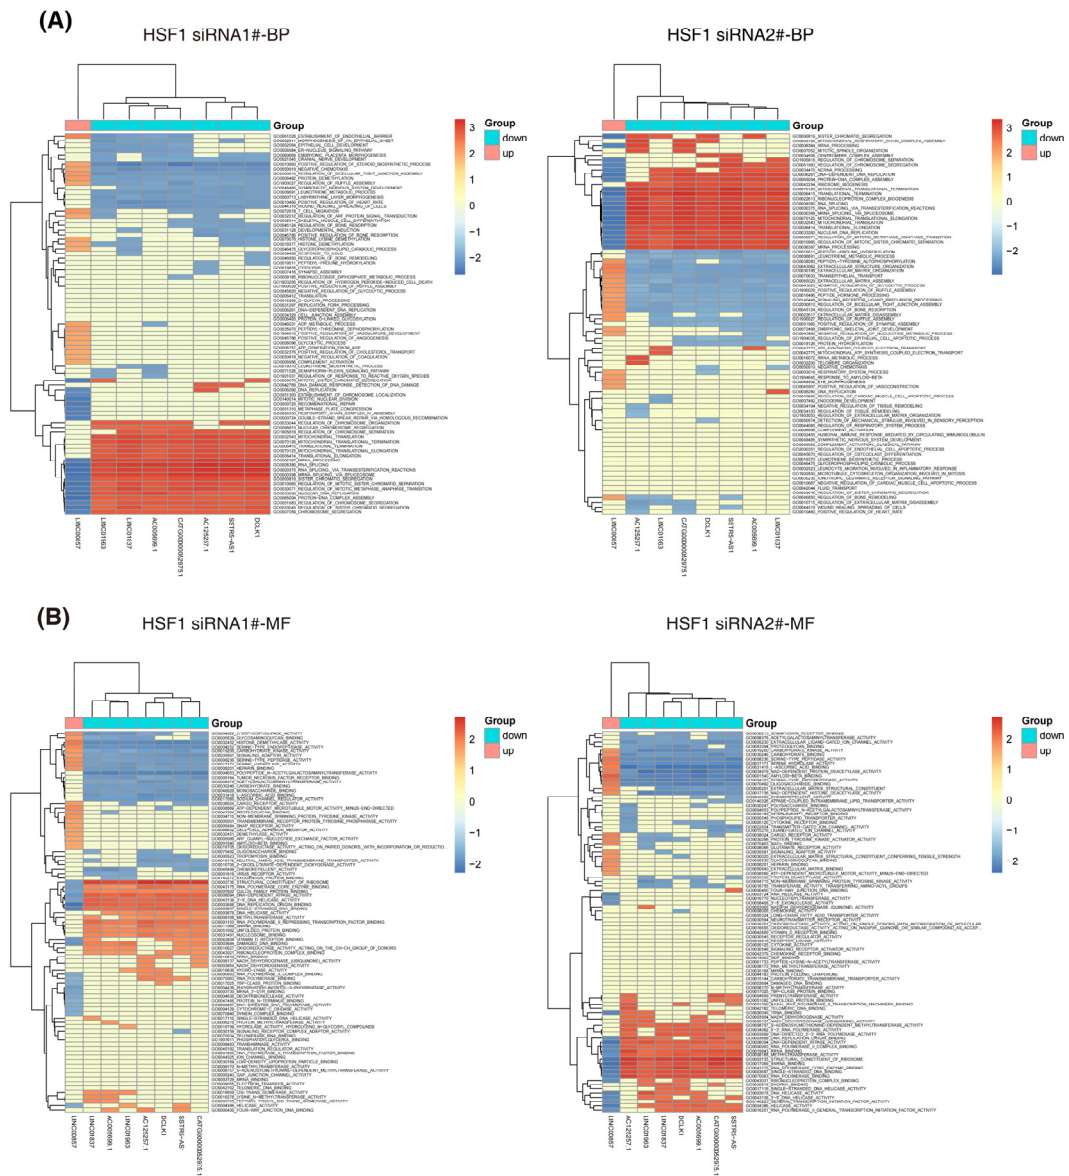

Figure S3. Gene Set Enrichment Analysis (GSEA) on 8 HSF1-associated downregulated lncRNAs. (BP, Biological process, MF, Molecular function).

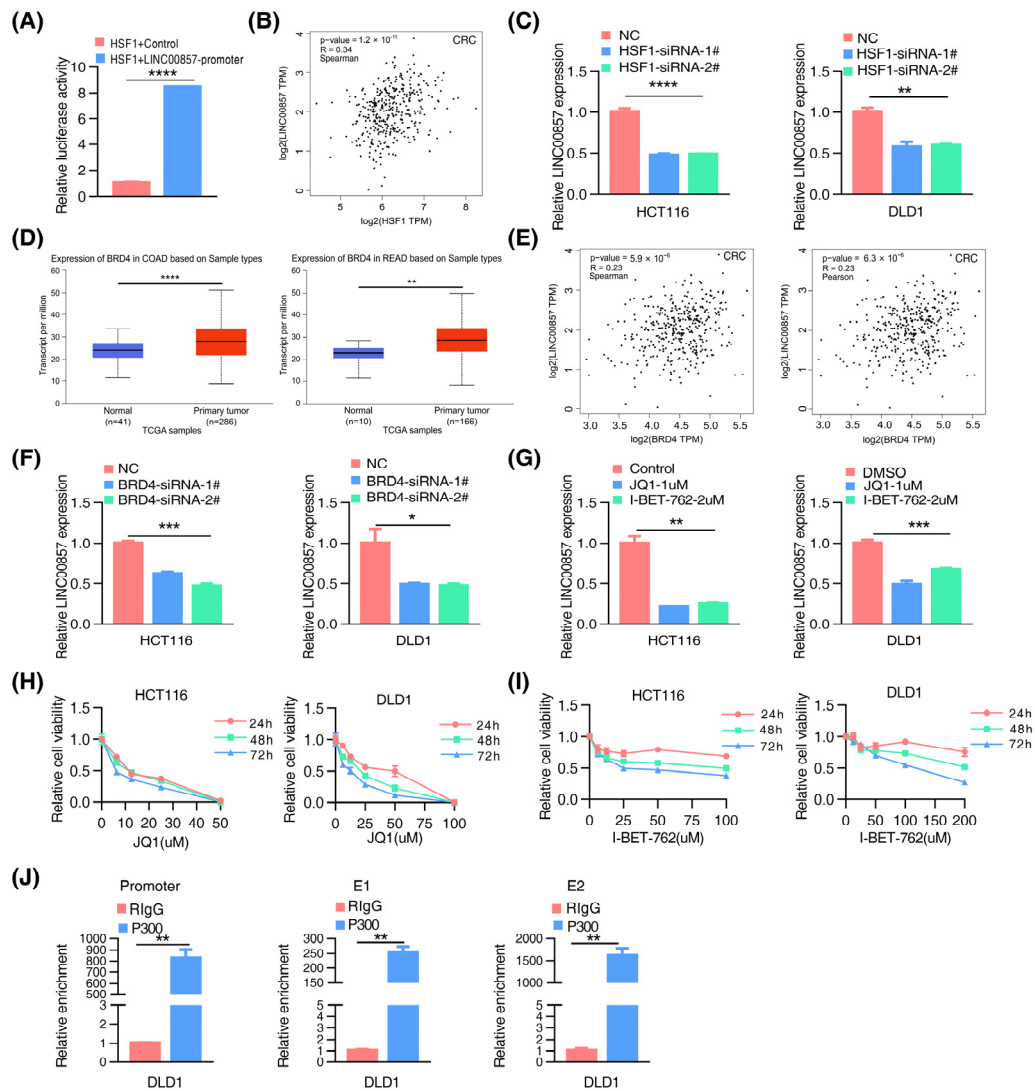

Figure S4. The effect of HSF1 and super enhancer on LINC00857 expression. (A) The relative luciferase activity after transfection HSF1 and LINC00857 promoter. (B) Correlation between LINC00857 and HSF1 expression using GEPIA database. (C) Relative LINC00857 expression after HSF1 knockdown. (D) Comparison of BRD4 expression levels between normal and tumor in CRC by UALCAN database (COAD, colon cancer, READ, rectum cancer). (E) Correlation between LINC00857 and BRD4 expression using GEPIA database. (F) Relative LINC00857 expression after BRD4 knockdown by qPCR assays. (G) Relative LINC00857 expression after the treatment with JQ1 (1 μM) or iBET-762 (2 μM) by qPCR assays. (H-I) HCT116 and DLD1 cells were treated with JQ1 and I-BET-762, and the relative cell viability was determined by CCK8 assays. (J) The relative enrichment level of P300 to LINC00857 promoter and enhancers by ChIP-qPCR assays. All data represents mean \pm SD, $n=3$. * $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$; **** $p < 0.0001$.

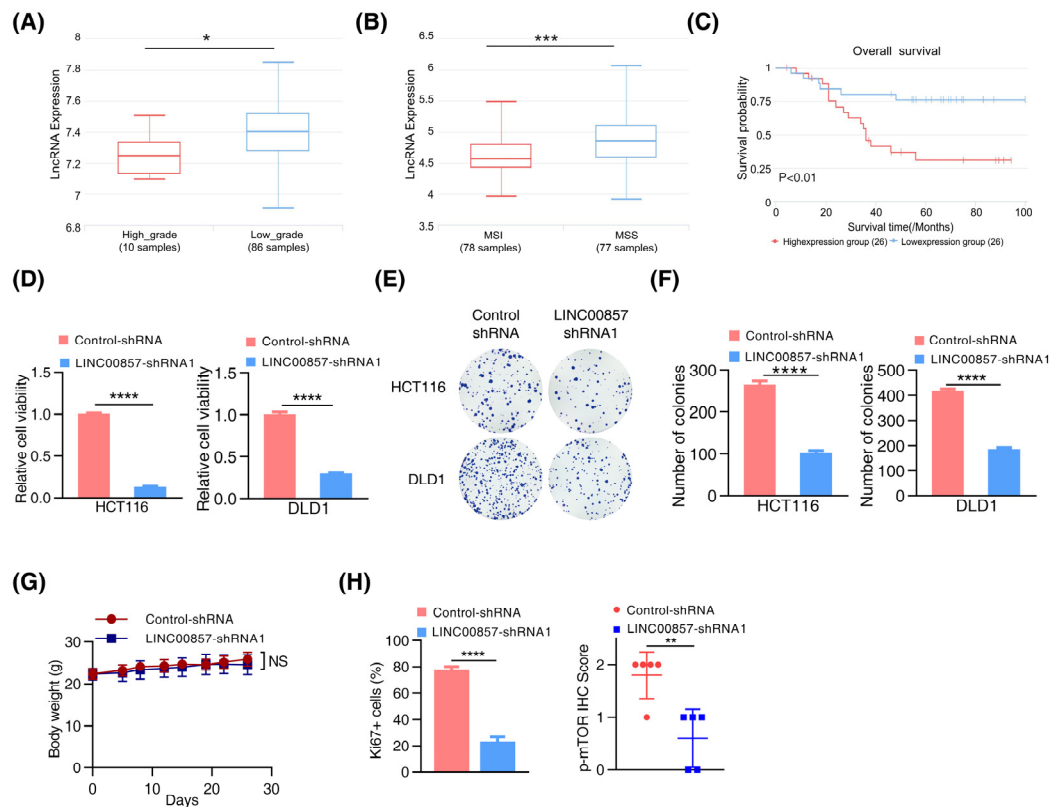

Figure S5. LINC00857 is upregulated and beneficial for CRC carcinogenesis. (A-B) Analysis of LINC00857 expression levels by data from InCAR database (A. CR_S101, B. CR_S104). (C) The prognostic value of LINC00857 in COAD (colon cancer) using the InCAR database (CR_01). (D-F) Relative cell viability and colony formation assays was measured after LINC00857 knockdown by shRNA. (G) The body weight in different groups in nude mice assays. (H) Quantification for IHC analysis of Ki67 and p-mTOR activity in nude mice assays. All data represents mean \pm SD, $n \geq 3$. * $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$; **** $p < 0.0001$.

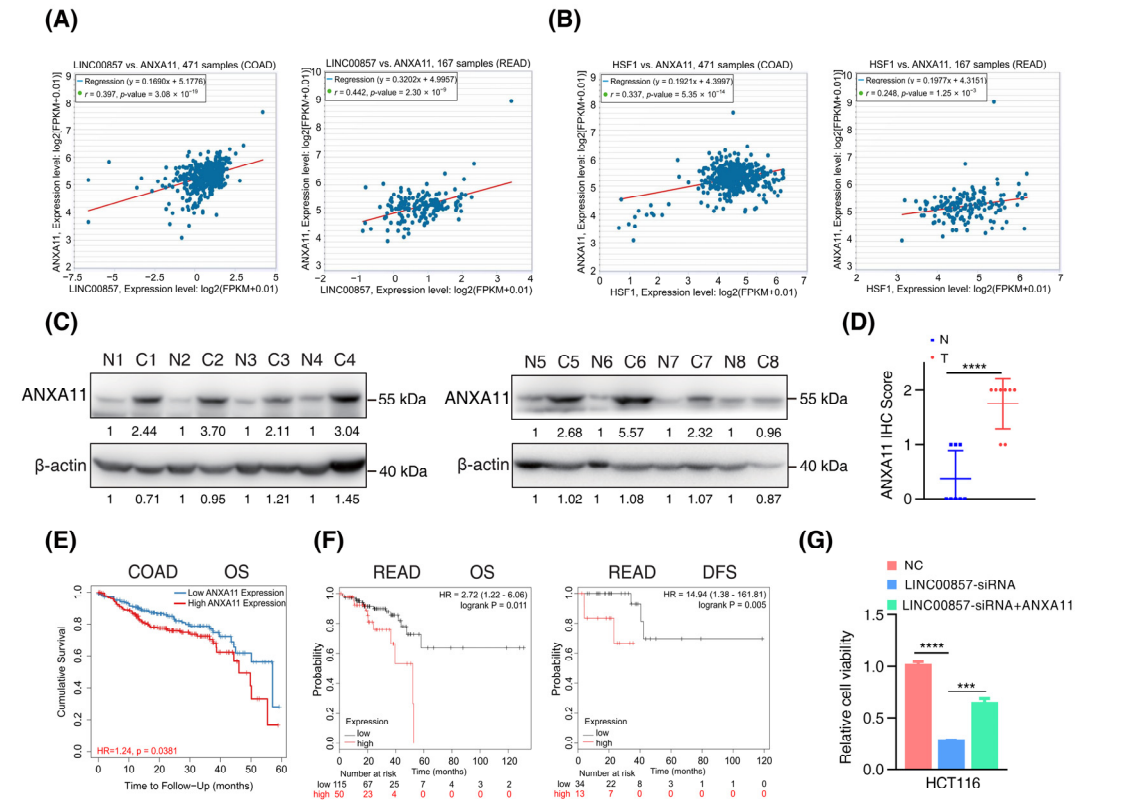

Figure S6. The expression and prognostic value of ANXA11 in CRC. (A-B) Correlation between LINC00857, ANXA11 and HSF1 expression using Starbase database. (C) The increased expression of ANXA11 in colorectal tumor tissues ($n=8$) compared to matched normal tissues. (D) Quantification for IHC analysis of ANXA11 in paired colorectal tumor tissues. (E) The association between ANXA11 expression and overall survival (OS) in COAD (colon cancer) was analyzed by TIMER database. (F) Kaplan-Meier survival curves for OS and DFS of patients with high and low ANXA11 expression in READ (rectum cancer) (OS, overall survival; DFS, disease free survival). (G) The effect of LINC00857 knockdown on cell viability in HCT116 cells treated with exogenous ANXA11 was analyzed by CCK-8 assays. All data represents mean \pm SD, $n \geq 3$. * $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$; **** $p < 0.0001$.

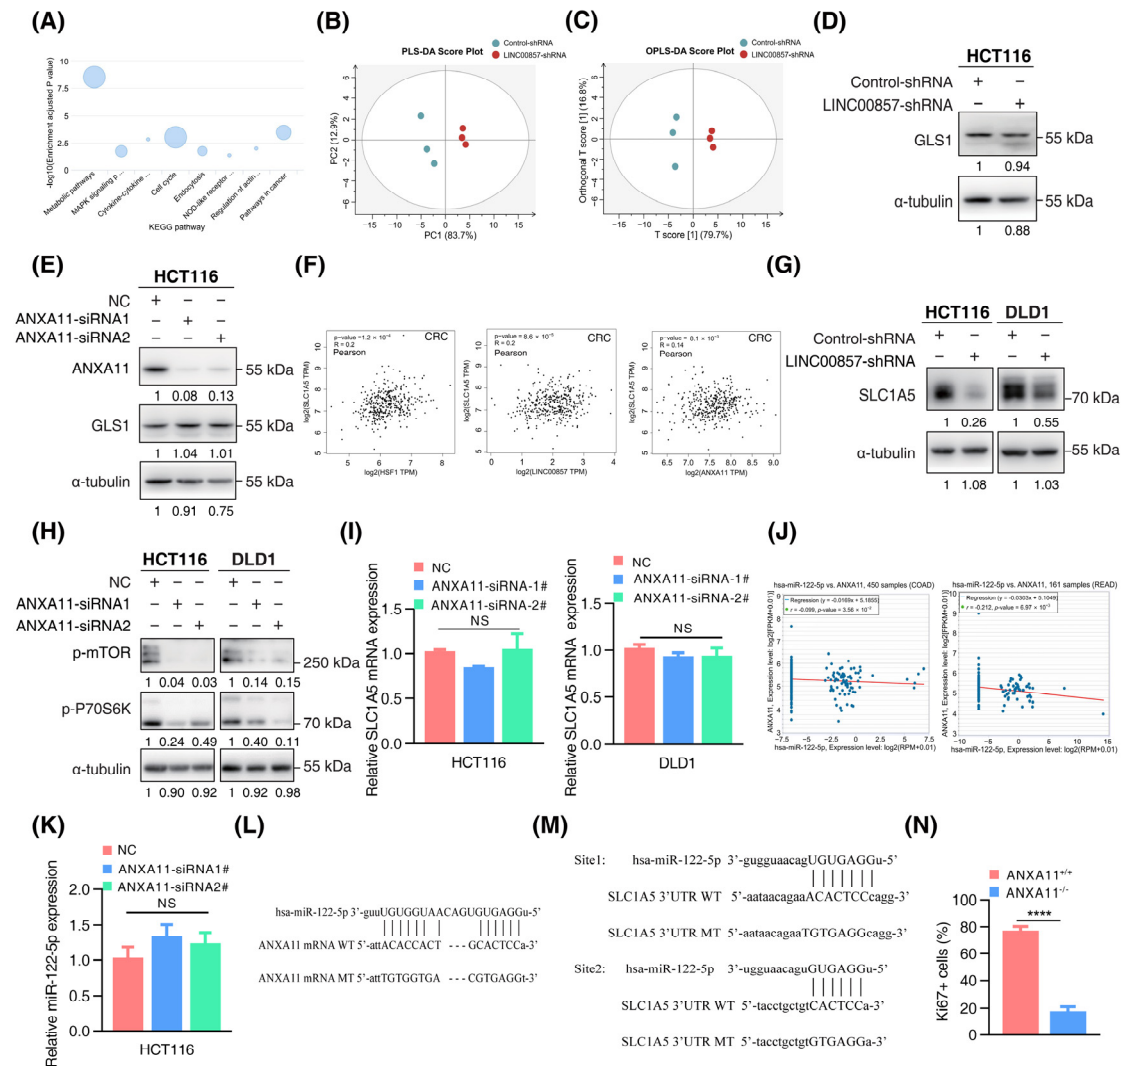

Figure S7. The effect of LINC00857-ANXA11 axis on glutamine metabolism. (A) KEGG (kyoto encyclopedia of genes and genomes) pathway analysis of LINC00857 by InCAR database. (B-C) Score plot of partial least squares discriminant analysis (PLS-DA) and orthogonal partial least squares discriminant analysis (OPLS-DA) between control and LINC00857 knockdown group after LC-MS (liquid chromatography mass spectrometry) analysis. (D-E) The effect of LINC00857 and ANXA11 knockdown on GLS1 expression was explored by western blotting. (F) Correlation between HSF1-LINC00857-ANXA11 axis and SLC1A5 expression using GEPIA database. (G) The effect of LINC00857 knockdown on SLC1A5 expression was explored by western blotting. (H) The effect of ANXA11 knockdown on p-mTOR activity was explored by western blotting. (I) The effect of ANXA11 knockdown on SLC1A5 mRNA expression was analyzed by qPCR. (J) The scatter plot of the relationship between hsa-miR-122-5p and ANXA11 expression according to StarBase data. (K) The effect of ANXA11 knockdown on miR-122-5p expression was analyzed by qPCR. (L-M)

Schematic representation of the predicted target site for miR-122-5p in ANXA11 mRNA and SLC1A5 3'UTR. (N) Quantification for IHC analysis of Ki67 in ANXA11^{+/+} and ANXA11^{-/-} mice colorectal tissues. All data represents mean \pm SD, $n \geq 3$. * $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$; **** $p < 0.0001$.

Table S1. siRNA sequences.

Name	siRNA sequences
Negative control	S: UUCUCCGAACGUGUCACGUTT AS: ACGUGACACGUUCGGAGAATT
HSF1-siRNA 1#	S: CCUGAAGAGUGAAGACAUATT AS: UAUGUCUUCACUCUUCAGGTT
HSF1-siRNA 2#	S: GGACAAGAAUGAGCUCAGUTT AS: ACUGAGCUCAUUCUUGUCCTT
ANXA11-siRNA 1#	S: AGGCCAUCAUUGACUGCCUTT AS: AGGCAGUCAAUGAUGGCCUTT
ANXA11-siRNA 2#	S: GGUGAAAUGUCUCAAGAAUTT AS: AUUCUUGAGACAUUUCACCTT
BRD4-siRNA 1#	S: CCGUGAUGCUCAGGAGUUUTT AS: AAACUCCUGAGCAUCACGGTT
BRD4-siRNA 2#	S: AGCUGAACCUCUCCUGAUUATT AS: UAAUCAGGGAGGUUCAGCUTT
LINC00857-siRNA 1#	S: GGCUAUGUGCUGUGAACAATT AS: UUGUUCACAGCACAUAGCCTT
LINC00857-siRNA 2#	S: GGUAUUAGUGGGUGAAUAUTT AS: AUAUUCACCCACUAAUACCTT
has-miR-122-5p mimics	S: UGGAGUGUGACAAUGGUGUUUG AS: AACACCAUUGUCACACUCCA
miRNA inhibitor NC	CAGUACUUUUGUGUAGUACAA
has-miR-122-5p inhibitors	CAAACACCAUUGUCACACUCCA
sh-NC	TTCTCCGAACGTGTCACGT
sh-LINC00857	GGCTATGTGCTGTGAACAA

Table S2. Primer sequences.

Name	sequences
HSF1-F	ACGGAGTTCCAGCACCCA
HSF1-R	CGCCACAGAGCCTCATTCT
a-Tubulin-F	GAAGCAGCAACCATGCGTGA
a-Tubulin-R	AAGGAATCATCTCCTCCCCCA
