

Figure S8

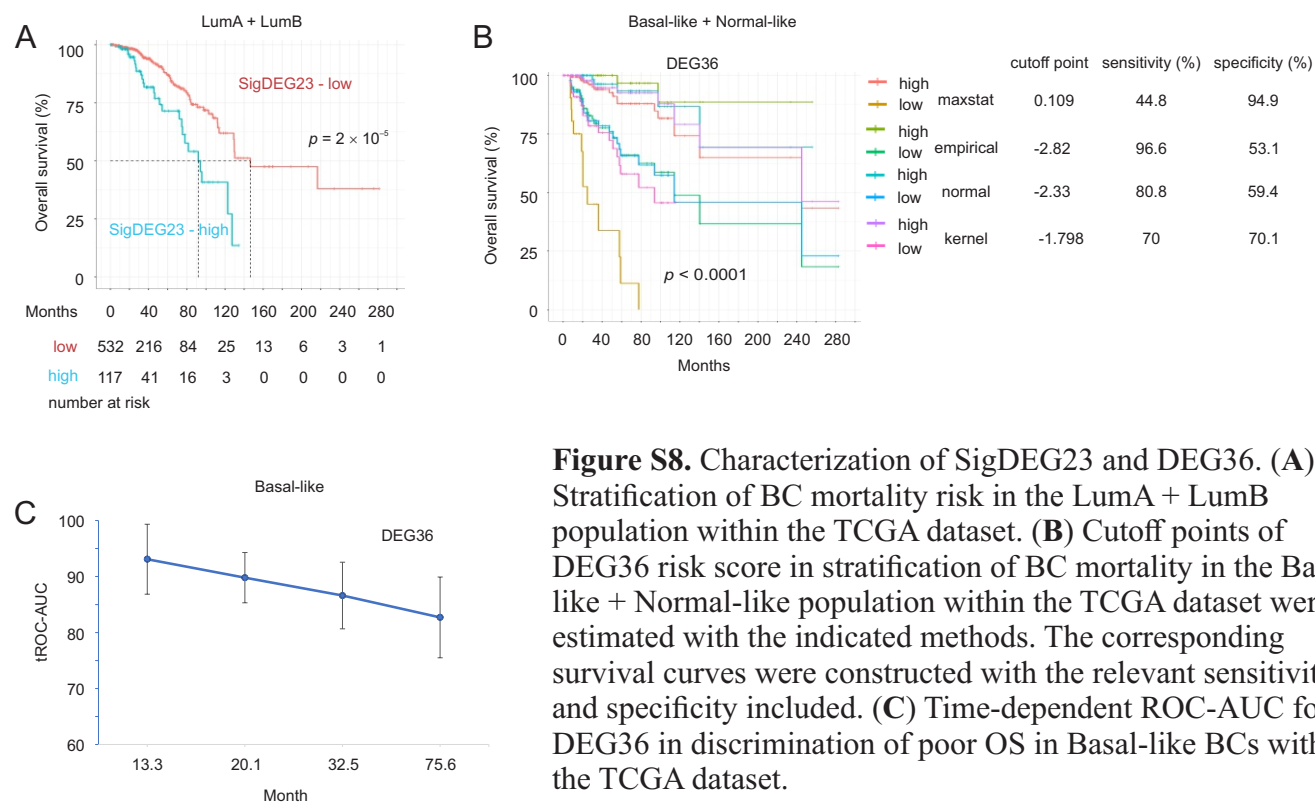

Figure S8. Characterization of SigDEG23 and DEG36. **(A)** Stratification of BC mortality risk in the LumA + LumB population within the TCGA dataset. **(B)** Cutoff points of DEG36 risk score in stratification of BC mortality in the Basal-like + Normal-like population within the TCGA dataset were estimated with the indicated methods. The corresponding survival curves were constructed with the relevant sensitivity and specificity included. **(C)** Time-dependent ROC-AUC for DEG36 in discrimination of poor OS in Basal-like BCs within the TCGA dataset.
