

Figure S5. TFRC expression is significantly associated with poor prognosis of synovial sarcoma.

A, B. Kaplan-Meier curves showing the relationship between TFRC mRNA expression levels and OS of all patients with synovial sarcoma treated in our institute (A; n = 39) or of patients with advanced synovial sarcoma treated in our institute (B; n = 13). Subjects were dichotomized into TFRC high (z-score ≥ 2) and TFRC low (z-score < 2) groups. Statistical significance was calculated using a log-rank test. The P-value is indicated in each figure.
