APPENDIX S1 – OVERALL RISK OF BIAS AND APPLICABILITY SCORE PER BIOLOGICAL FACTOR

Figure A1.1 ‘Risk of Bias’ and ‘Applicability’ assessment sorted by biological factor. Values indicate the number of studies within the respective QUADAS-2 ‘risk of bias’ or ‘applicability’ class. Green or "low" indicates a low risk of bias in the study and/or low concern regarding applicability. Yellow or "unclear/medium" suggests either insufficient information provided or non-ideal study characteristics influencing applicability or risk of bias. Red or "high" signifies significant concerns regarding bias or applicability.

APPENDIX S2 – INDIVIDUAL QUADAS-2 ‘RISK OF BIAS’ AND ‘APPLICABILITY’ SCORES PER INCLUDED STUDY

Table A2.1 ‘Risk of Bias’ and ‘Applicability’ assessment for each independent study. Values indicate the numbers of studies within the respective QUADAS-2 ‘risk of bias’ or ‘applicability’ class. Green or "low" indicates a low risk of bias in the study and/or low concern regarding applicability. Yellow or "unclear/medium" suggests either insufficient information provided or non-ideal study characteristics influencing applicability or risk of bias. Red or "high" signifies significant concerns regarding bias or applicability.

APPENDIX S3 – OVERVIEW OF PROPORTION MRI PARAMETER STUDIES REPORTING SIGNIFICANT ASSOCIATIONS WITH BIOLOGICAL FEATURES.

Tables depicting the frequency of reported significant correlations between the stated biological factors and the individual MRI parameter out of the total number of correlations of the researching studies, displayed as $\text{nr.Significant}^{\text{significant references}}/\text{nr.Total}^{\text{Other reporting references}}$. If the percentage of significant correlations exceeds 50%, the corresponding numbers are presented in bold font. The tables are sorted by MRI sequence technique: (A3.1) Diffusion parameters (including all IVIM and DKI parameters), (A3.2) Perfusion parameters (including pharmacokinetic models, time-signal intensity curve (TIC), and arterial spin labeling (ASL) parameters), and (A3.3) stand-alone conventional t1w and t2w imaging parameters.

A3.1 STAND-ALONE CONVENTIONAL T1W AND T2W IMAGING PARAMETERS

		Conventional T1W(+c), T2W, DWI or not specified								DWI	T1W		T2W

Table shows the proportion of studies (number significant / number not significant) reporting significant associations between different functional MRI parameters and biological features as indicated. Proportions of more than half testing the indicated association are highlighted in bold.

Abbreviations = Min: minimum; max: maximum; SD: Standard deviation; P10,P25,P75,P90: percentile 10, 25, 75, 90; Vp: fractional plasma volume; QTM: Quantitative transport mapping; RE: relative enhancement; ME: maximum enhancement; MRE: maximum relative enhancement; TTP: time to peak; WIR: wash-in rate; WOR: wash-out rate; AUC: Area under the curve; Fb: perfusion; PS: Capillary permeability, Vb: blood volume; Ve: Extravascular extracellular space volume; MTT: whole blood mean transit time; CV: Coefficient of variance, TBF: tumor blood flow.

Notes: *Significant for P16 positive subgroup analyses; †significant in P16 negative subgroup analyses; ‡study tested two MVD IHC markers.

APPENDIX S4 – SIGNIFICANCE OVERVIEW FOR BIOLOGICAL FEATURES WITH LESS THAN FOUR REPORTING SOURCES

Tables depicting the frequency of reported significant results for each individual MRI parameter out of the total number of researched studies, displayed as $\text{nr. Significant}^{\text{significant references}} / \text{nr. Total}^{\text{Other reporting references}}$. If the percentage of significant studies exceeds 50%, the corresponding numbers are presented in bold font. The tables are sorted by MRI sequence technique: (A4.1) Diffusion parameters (including all IVIM and DKI parameters), (A4.2) Perfusion parameters (including pharmacokinetic models, time-signal intensity curve (TIC), and arterial spin labeling (ASL) parameters), and (A4.3) stand-alone conventional t1w and t2w imaging parameters.

A4.1 STAND-ALONE CONVENTIONAL T1W AND T2W IMAGING PARAMETERS

Biological factor	Conventional T1W or T2W (not specified)		
	Volume	Diameter	Primary tumor necrosis on MRI
PD-L1	-	-	1/1^M
EBV	0/1 ^N	0/1 ^N	-

Abbreviations = Min: minimum; max: maximum; SD: Standard deviation; P10,P25,P75,P90: percentile 10, 25, 75, 90
