

Original Western blots of Fig. 1E.

Hemizygous deletion of *Birc5* markedly decreases survivin protein levels. Proteins were isolated from tumors (NB), kidneys (K), livers (L) and spleens (S) of *Birc5*^{+/+}*MYCN* tg/+ and *Birc5*^{+/-}*MYCN* tg/+ mice. Survivin protein levels were determined by Western blot. The red boxes mark the results presented in the manuscript. Shown are the results of 3 pairs of littermates (#1, #2 and #3).
