The authors wish to update the Acknowledgments in their paper published in *Crystals* journal [1].

Acknowledgments: Denis Rychkov acknowledge Elena Boldyreva for basic idea to study the crystals of amino acids and their salts, including L-Leucinium Hydrogen Maleate system, at low temperatures and high pressures. All the experiments were performed at REC-008 “Molecular design and ecologically safe technologies” of the Novosibirsk State University using its instruments: The crystals of L-Leucinium Hydrogen Maleate were grown by T. Nguyen (under joint guidance of S. Arkhipov and D. Rychkov), S. Arkhipov has collected and preliminary processed Raman spectroscopy data at low temperature. E. Losev performed high-pressure X-ray diffraction and Raman spectroscopy experiments and provided the optical microphotographs. S. Arkhipov and E. Losev have performed preliminary data analysis. The authors thank S. Arkhipov and E. Losev for fruitful discussions. The authors are also grateful to A. A. Iurchenkova for assistance in preparing figures. The Siberian Branch of the Russian Academy of Sciences (SB RAS) Siberian Supercomputer Center is gratefully acknowledged for providing supercomputer facilities. The authors also acknowledge the Supercomputing Center of the Novosibirsk State University (<http://nusc.nsu.ru>) for providing computational resources.

The authors apologize for any inconvenience caused and state that the scientific conclusions are unaffected. The original publication has also been updated.
