Supplementary Fig. S1. Diagram of the size distribution of nanoMIPs eluted at 60 °C, plot in logarithmic scale.

Supplementary Fig. S2. Optimization of the concentration of HRP-O using 6 dilutions of unstock HRP-O and the microplates with the immobilised nanoMIP for octopamine and uncoated microplates (Blank). Error bars represent the standard deviation for experiments performed in triplicate.

Supplementary Fig. S3. Optimisation of nanoMIPs concentration, each microplate was coated with different concentrations of nanoMIPs from 0.00056 to 0.56 mg·mL⁻¹. The HRP-O conjugate at 1:1200.

Supplementary Fig. S4. Optimization of the linear range of work for MINA competitive assay. Light blue line indicates binding of octopamine to octopamine specific nanoMIPs, (squares). Purple line indicates binding of octopamine to blank, uncoated microplates. Error bars represent the standard deviation for experiments performed in triplicate.
