Figure S1. FTIR spectrum of heparin (black), PNIPAm-NH₂ (red), and conjugation (copolymer) (blue).

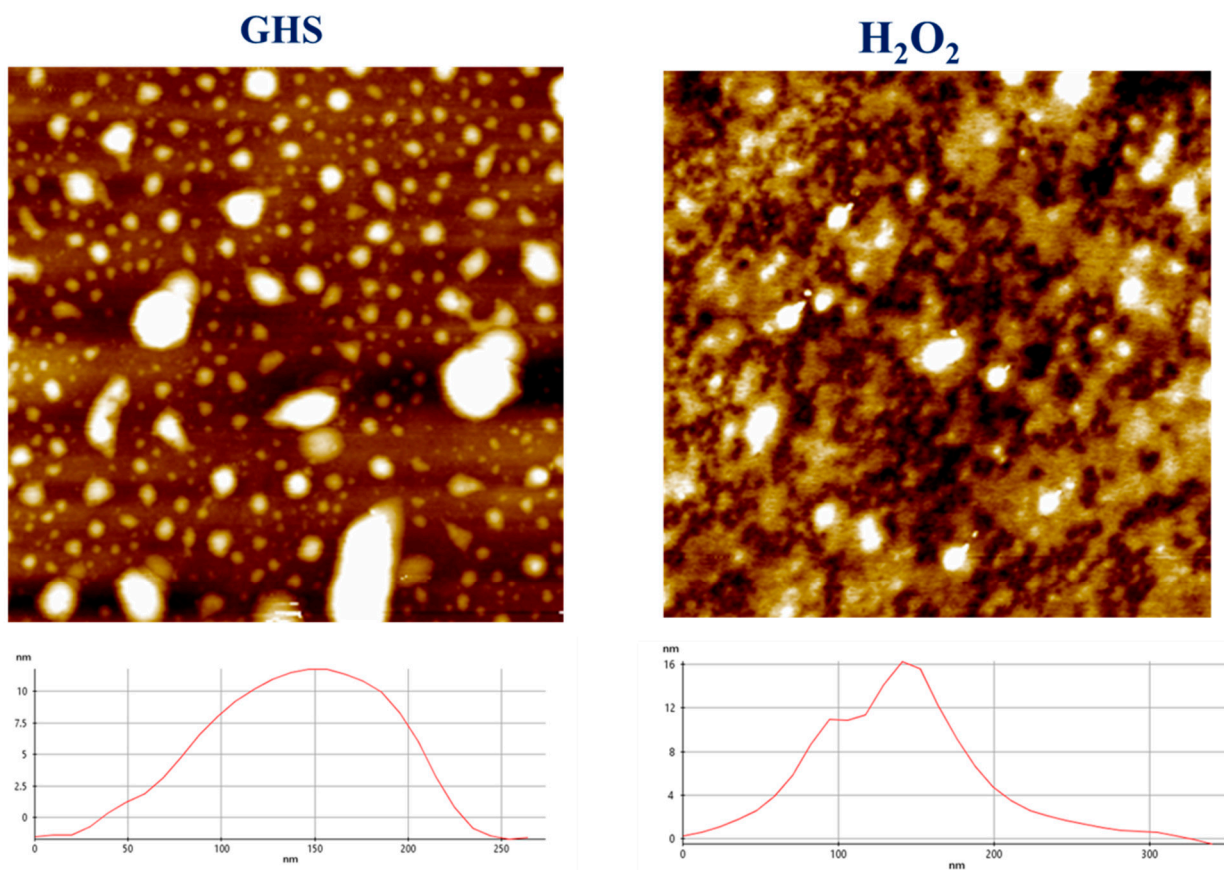

Figure S2. Particle morphology by AFM imaging of Hep-Chl-1 prodrug nanoparticles and after treatment either with 6 mM GSH and 0.1% H₂O₂.

Figure S3. The size of Hep-Chl-1 prodrug nanoparticles after incubating in human serum albumin and PBS with 1, 2, 4, 8, 16, 24, 48, and 72 h at 37 °C.

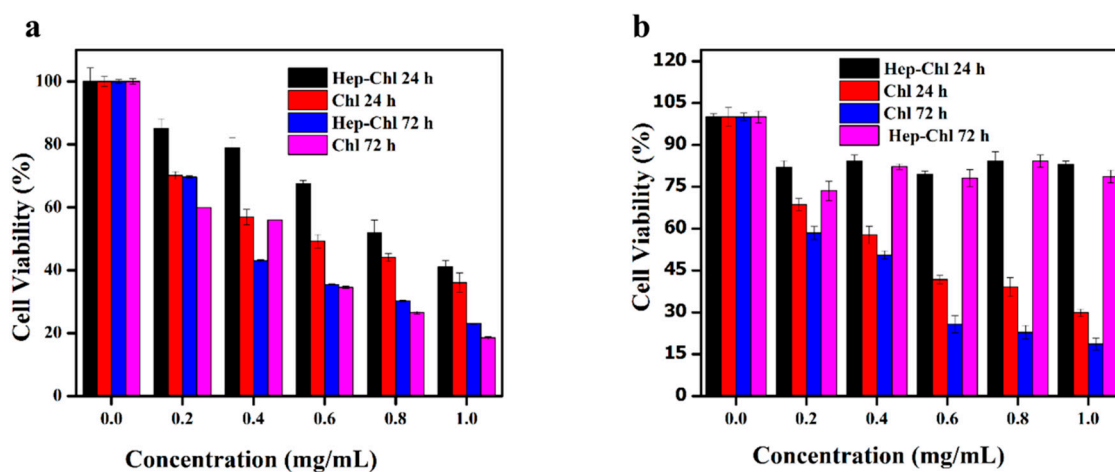

Figure S4. MTT profiles of (a) HeLa cells and (b) RAW264.7 cells treated with Chl and Hep-Chl (equivalent amount of Chl) for 24 and 72 h.

Figure S5. The fluorescence intensity measuring Rhodamine B labeled Hep-Chl-1 produg nanoparticle.
