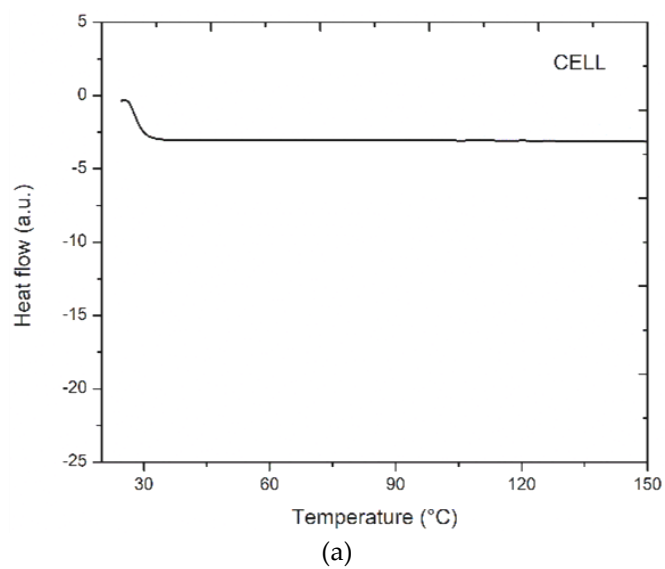

**Figure S1.** Regeneration of ionic liquid [BMIM][Cl] (1-Butyl-3-methylimidazolium chloride): left - aqueous solution of [BMIM][Cl] obtained after mulch film regeneration and extraction/washing; right - regenerated [BMIM][Cl],  $m_1$ -mass of [BMIM][Cl] used in experiment and  $m_2$ -mass of regenerated [BMIM][Cl]

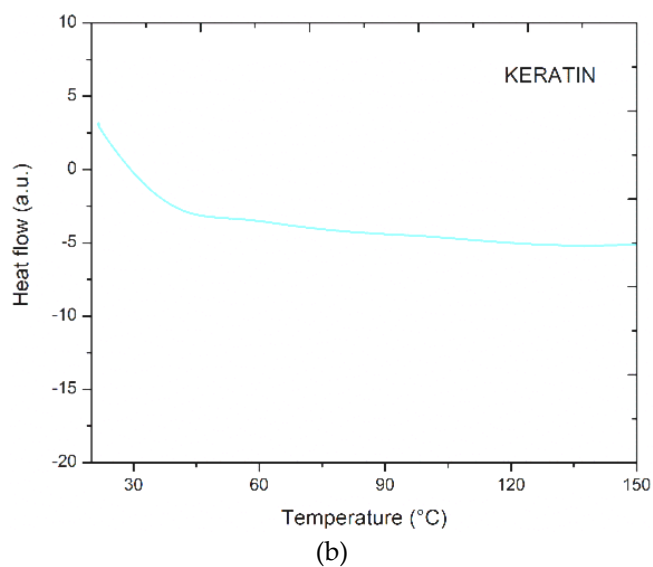

**Figure S2.** Thermal infrared images ultrasonic dispersion of the GCC in [BMIM][Cl] solution. The temperature of the dispersion increased from 36.5 °C to 112.1 °C after 7 min exposure to ultrasonication.

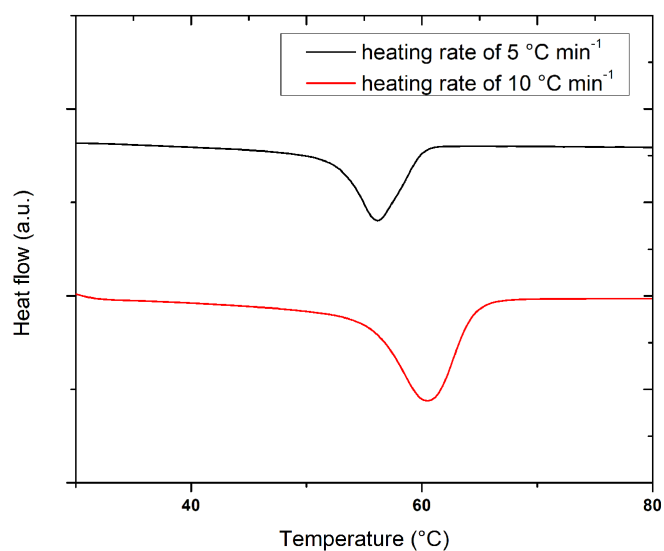

**Figure S3.** FE-SEM micrographs of the surfaces of (a) CELL, (b) CELL/PCL, (c) CELL/PCL/KER, and (d) CELL/PCL/KER/GCC (scale bar = 200  $\mu\text{m}$ )

**Figure S4.** DSC analysis of (a) neat cellulose (CELL), and (b) keratin (KER).

**Figure S5.** DSC analysis of CELL/PCL/KER/GCC biocomposite films at different heating rates: 5 and 10 °C min<sup>-1</sup>

**Table S1** The weight loss ( $W_L$  (%)) of the cellulose and biocomposite films during the biodegradability test

Day	$W_L$ (%)			
	CELL	CELL/PCL	CELL/PCL/KER	CELL/PCL/KER/GCC
7	21.22	13.86	16.65	16.16
14	46.96	19.03	25.34	22.18
21	52.03	22.40	45.22	38.32
28	59.12	37.06	52.18	43.62

**Table S2** The total content of calcium ions (Ca<sup>2+</sup>) in the mulch films (mg g<sup>-1</sup> and % (w/w))

Sample	Total content of Ca <sup>2+</sup> ions in the mulch films	
	mg g <sup>-1</sup>	% (w/w)
CELL/PCL/KER/GCC (0 days)	19.889	1.989
CELL/PCL/KER/GCC (28 days)	0.562	0.056

**Table S3** ATR-FTIR absorption bands characteristic of biopolymers and biocomposites

Wavenumber, cm <sup>-1</sup>	Functional group	Components
3000–3700	OH stretching	all
3281	N–H stretching	KER
1722	–C=O stretching	PCL
1100–1710	amide region	KER
1639	C=O stretching (amide I)	KER
1637	–C=O stretching	CELL/PCL
1528	C–N stretching and N–H bending (amide II),	KER
1232	C–O stretching and N–H and O=C–N bending (amide III)	KER
1418	Hydrogen intramolecular bonds	CEL
896	β-glycosidic linkage	CEL
874	C–H out of plane glucose ring	CEL
