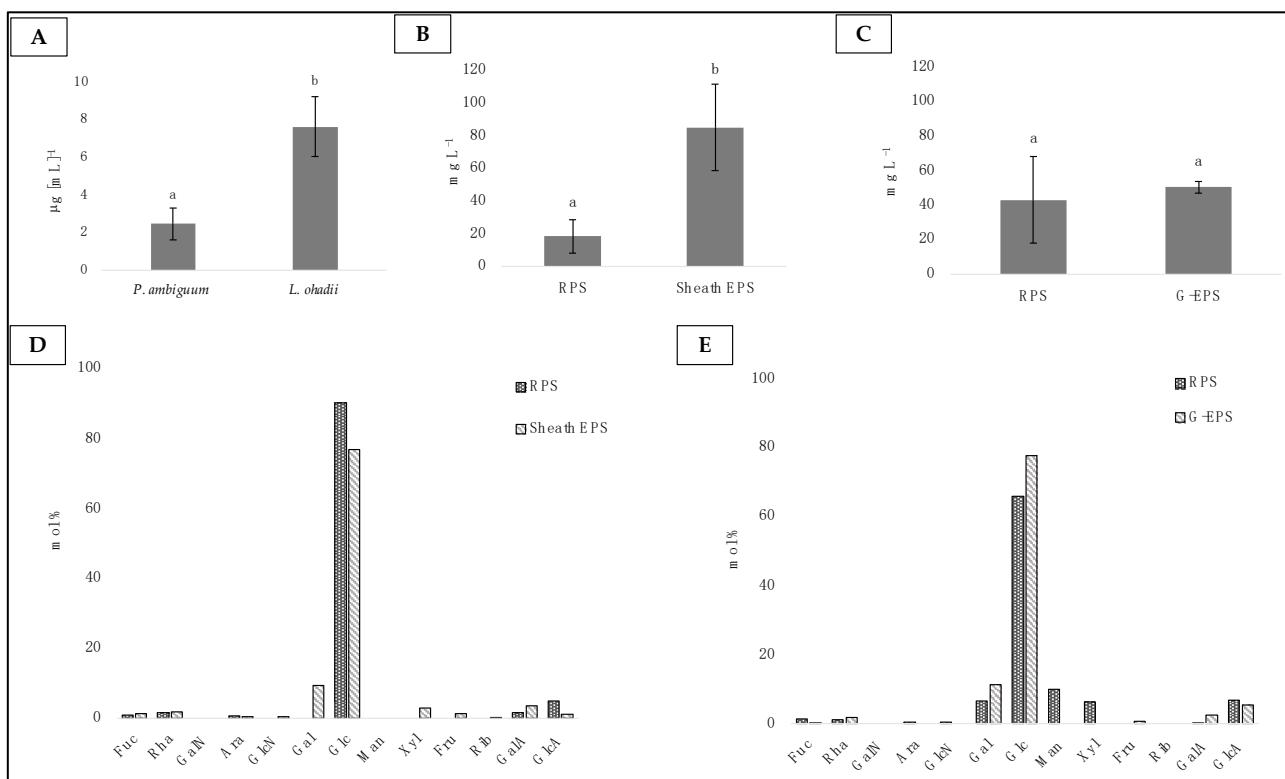

**Figure S1.** Biocrusts and biofilms grown after 4 weeks and 4 weeks plus 5 days (control and water deprived). *P. ambiguum* (column A) and *L. ohadii* (column B) biocrusts and *P. ambiguum* (column C) and *L. ohadii* (column D) biofilms.

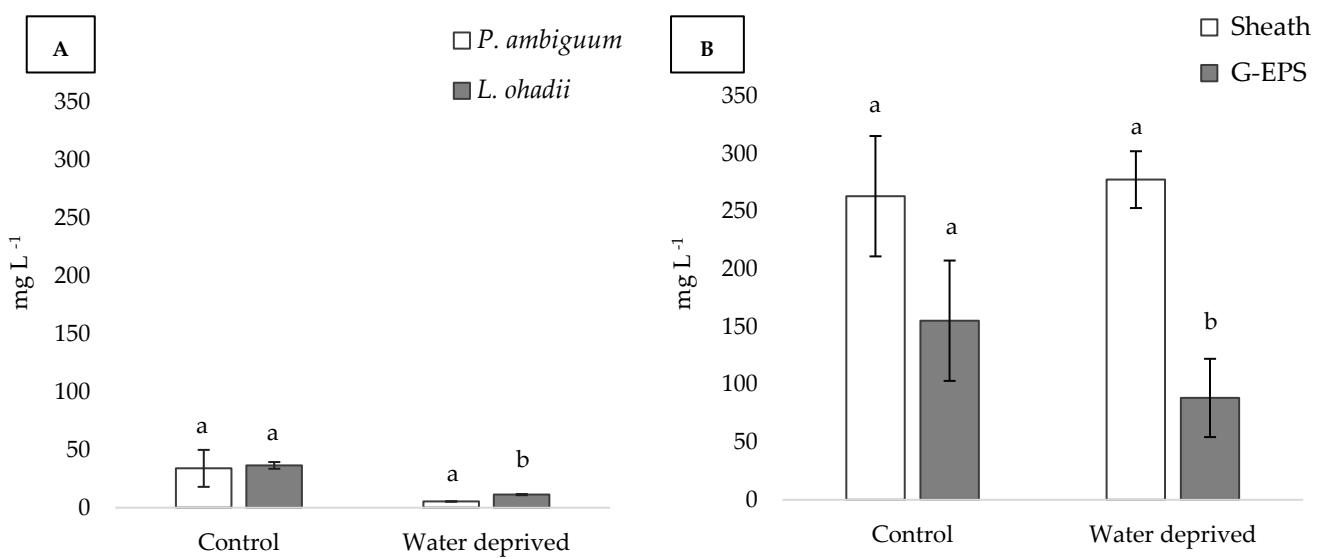

**Figure S2.** Biocrust features after 4 weeks watered: (A) chlorophyll *a*, (B) EPS contents from *P. ambiguum*, (C) EPS contents from *L. ohadii*, (D) monosaccharidic composition from *P. ambiguum*, (E) monosaccharidic composition from *L. ohadii*. Values represent the mean of  $N = 3$ , error bars represent SD. Different letters represent significant differences ( $P < 0.05$ ). Molar percentages (%) of single sugars are represented (expressed as moles of the single monosaccharide divided by the total amount of moles of monosaccharides in the EPS  $\times 100$ ). Fuc, fucose; Rha, rhamnose; GalN, galactosamine; Ara, arabinose; GlcN, glucosamine; Gal, galactose; Glc, glucose; Man, mannose; Xyl, xylose; Fru, fructose; Rib, ribose; GalA, galacturonic acid; GlcA, glucuronic acid.

**Figure S3.** LB-EPSs contents (A) and TB-EPSs contents (B) in *P. ambiguum* and *L. ohadii* biocrusts (values represent the mean of  $N = 3$ , error bars represent SD). Different letters represent significant differences ( $P < 0.05$ ) in each condition.

**Figure S4.** Biofilm features after 4 weeks with culture medium: (A) chlorophyll *a*, (B) EPS contents from *P. ambiguum*, (C) EPS contents from *L. ohadii*, (D) monosaccharide composition from *P. ambiguum*, (E) monosaccharide composition from *L. ohadii*. Values represent the mean of  $N = 3$ , error bars represent SD. Different letters represent significant differences ( $P < 0.05$ ).
