

Supplementary Figure and Table Legends

Figure S1. Cadmium stress repress the growth of roots and shoots of rice seedlings.

2-d-old seedlings germinated on 1/2MS plates transferred to new plates supplemented with or without 50, 100, or 200 μM CdCl_2 , and then root (A) and shoot (B) length were measured at 1, 2, 3, 4, and 5 days after transfer. The results shown are the mean \pm SD. Values are derived from three independent biological experiments.

Table S1. Primers used for qRT-PCR analysis in this study. F: forward; R: reverse.
