

Supplementary Table 1: Monoclonal antibody panel for flow cytometry

Specificity	Fluorophore	Clone
CD3	Alexa Fluor 700	UCHT-1
CD4	PE-Cy7	OKT4
CD8	APC-H7	SK1
CD16	BV711	3G8
CD27	APC	0323
CD28	PE	CD28.2
CD45RA	Pacific Blue	H100
$\gamma\delta$ -TCR	Purified mouse Ab	11F2
Anti-mouse F(ab') ₂ -Fragment	Pacific Orange	-
V δ 1-TCR	FITC	TS8.2
V δ 2-TCR	PerCP	B6
Dead cells	EMA	-

Supplementary Table 2: Configuration of the BD LSR II with customized filter settings

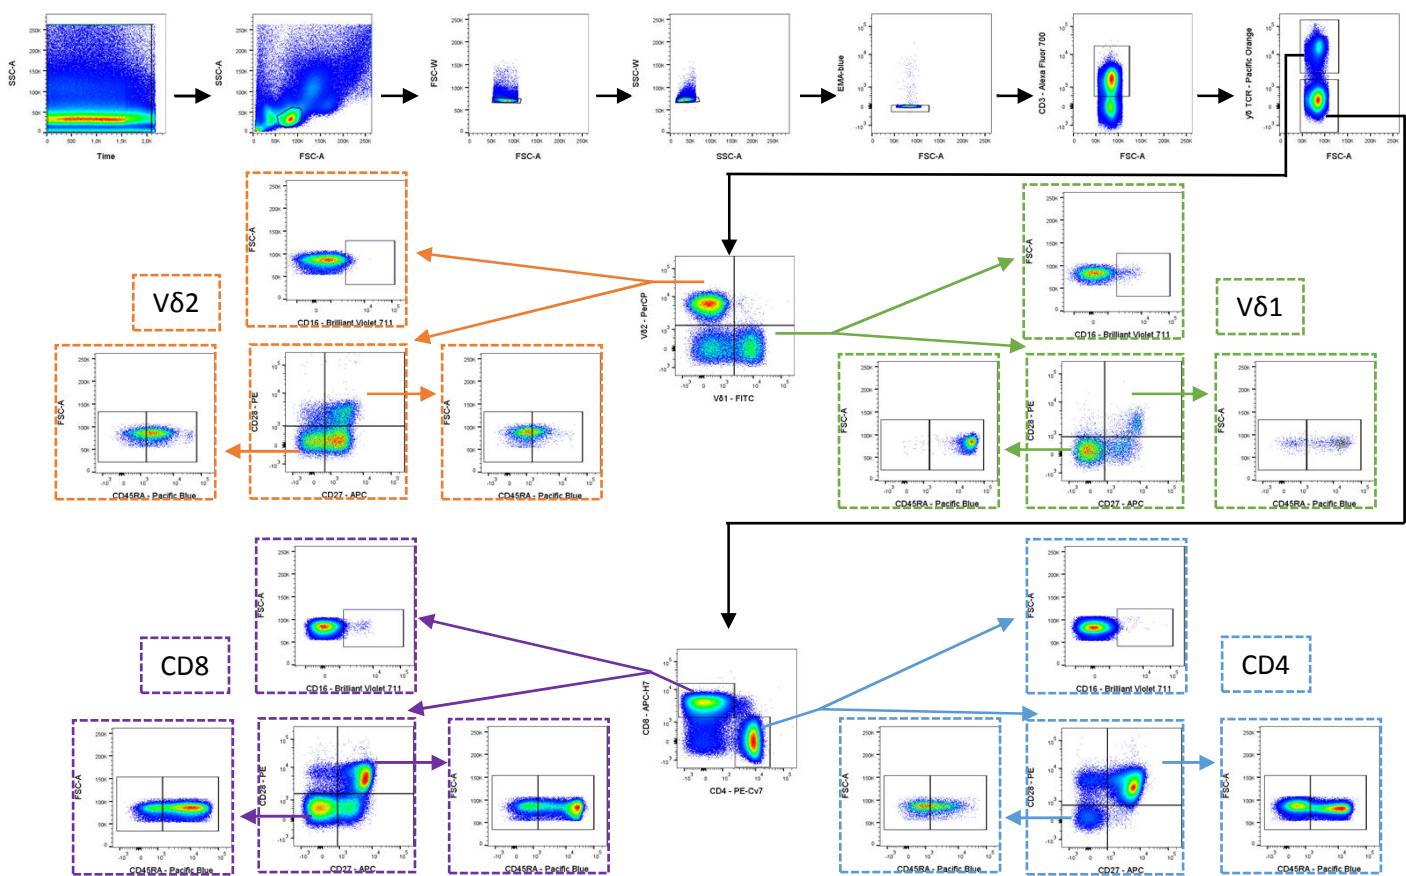

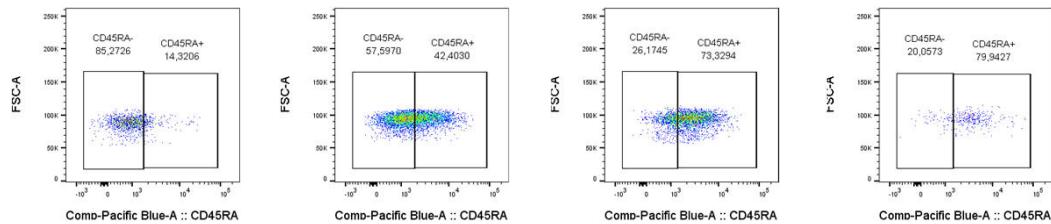

Laser wavelength	Laser power	Laser type	Optical filters	Spectral range [nm]	Fluorochrome
			Long pass [nm]	Band pass [nm]	
405 nm	25 mW	Vio Flame	685	700/13	693.5-706.5
			635	660/20	BV650
			600	610/20	BV605
			545	561/14	Pacific Orange
			-	450/50	Pacific Blue
				425-475	
488 nm	20 mW	Coherent Sapphire Solid State	735	780/60	PE-Cy7
			685	695/40	PerCP-Cy5.5
			655	670/14	PerCP
			600	610/20	EMA
			550	575/25	PE
			505	530/30	FITC
			-	488/10	SSC
633 nm	17 mW	JDS Uniphase HeNe	635	780/60	APC-H7
			710	730/45	Alexa Fluor 700
			-	660/20	APC

Supplementary Table 3: Cohort characteristics of twin pairs

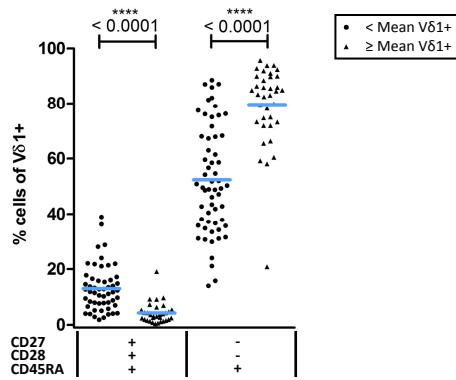

Variable	Category	Samples	
		n	%
Gender (DZ)	Male	12	35.3
	Female	22	64.7
Gender (MZ)	Male	16	32.0
	Female	34	68.0
CMV serostatus (DZ)	Positive	27	79.4
	Negative	7	20.6
CMV serostatus (MZ)	Positive	34	68.0
	Negative	16	32.5
Age (DZ)	Median	50 years	
	Age range	43-77 years	
Age (MZ)	Median	46 years	
	Age range	41-64 years	

Supplementary Table 4: Spearman correlation for all differentiation phenotypes of CD4+, CD8+, V δ 1+ and V δ 2+ T cells for MZ and DZ twins.

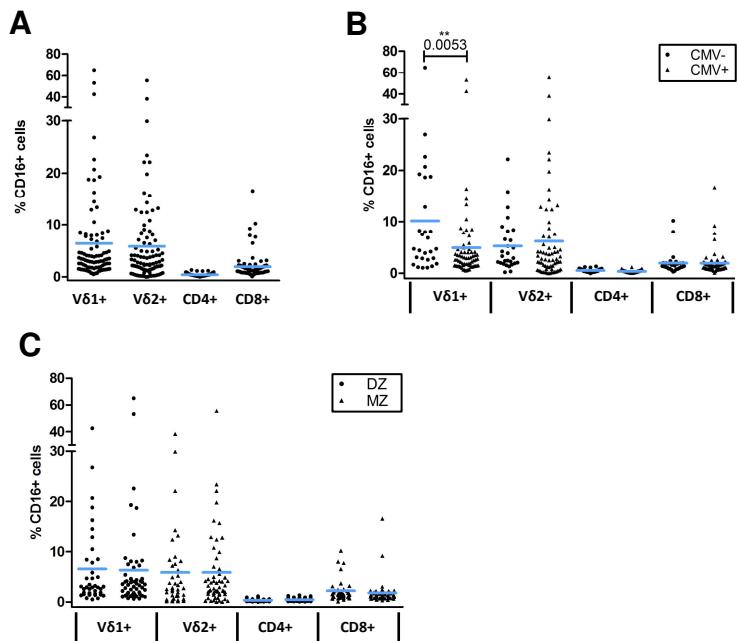

Subset	Twins	Spearman r	p-value	95% CI	
CD4+CD27+CD28+CD45RA+	MZ	0,679	0,000	0,377	0,850
CD4+CD27+CD28+CD45RA-	MZ	0,870	< 0,0001	0,718	0,943
CD4+CD27+CD28-	MZ	0,701	< 0,0001	0,413	0,862
CD4+CD27-CD28+	MZ	0,646	0,001	0,326	0,833

A**B**

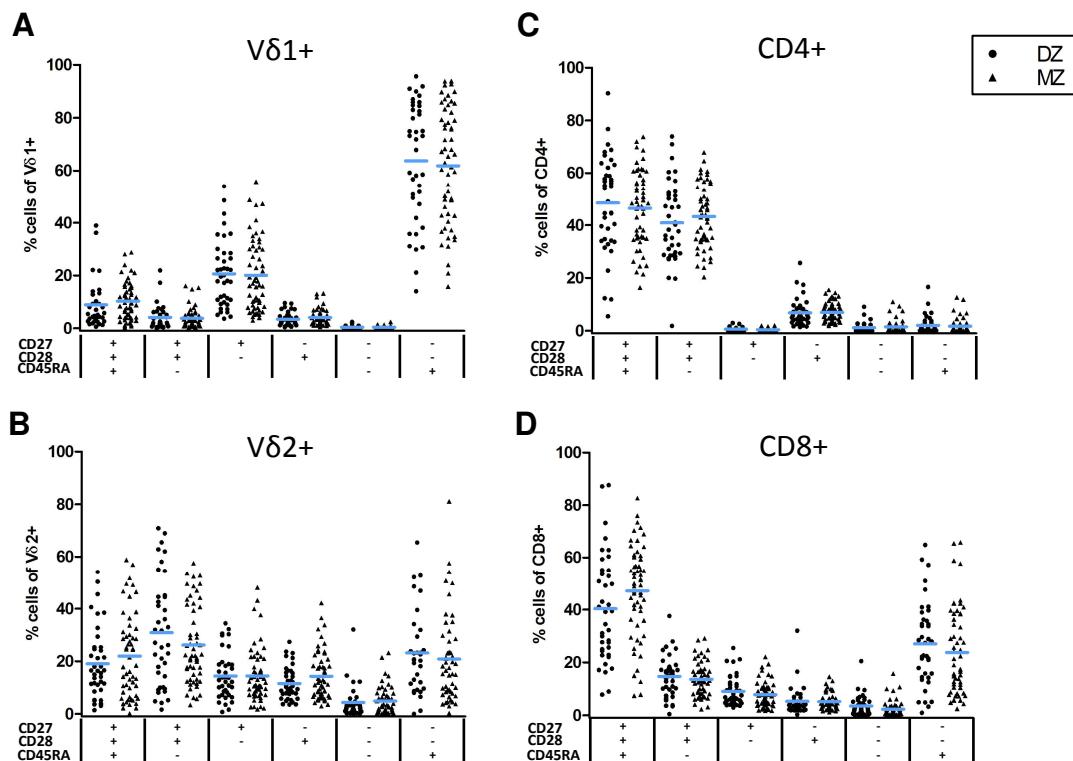

Supplementary Figure 1: Gating strategy for the analysis of $\gamma\delta$ and $\alpha\beta$ T cell phenotypes. **(A)** Data from a representative subject illustrates the here applied gating strategy that is similar to the one we suggested in the OMIP-20 [20]. **(B)** Donor heterogeneity in the expression of CD45RA on CD27+CD28+ $\gamma\delta$ T cells.

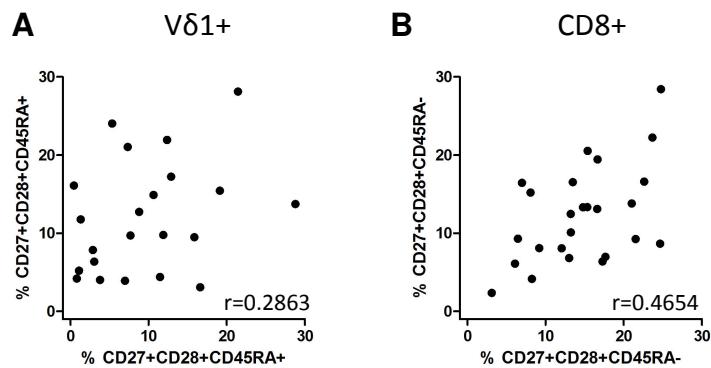

Supplementary Figure 2: Differentiation phenotypes of subjects with high/low frequencies of V δ 1. Distribution of early (CD27+CD8+CD45RA+) and late (CD27-CD28-CD45RA+) differentiated T cells of individuals with V δ 1 frequencies out of all CD3+ cells below/above the mean. Only early and very late differentiation phenotypes are plotted. Blue lines indicate the mean for each group. Statistical evaluation was performed using the Man-Whitney-U test with Bonferroni correction for multiple comparisons: p<0.0083 was defined as statistically significant.

Supplementary Figure 3: CD16 expression on $\gamma\delta$ and $\alpha\beta$ T cell subsets. Frequencies of CD16 expressing V δ 1+, V δ 2+, CD4+ and CD8+ T cells (**A**). Influence of CMV serostatus on CD16 expression (**B**). Comparable distribution of CD16+ cells in MZ and DZ (**C**). Blue lines indicate the mean for each group. Statistical evaluation was performed using the Man-Whitney-U test with the Bonferroni correction for multiple comparisons: p<0.0125 was defined as statistically significant. Non significant results are not shown.

Supplementary Figure 4: Differentiation signatures of $\gamma\delta$ and $\alpha\beta$ T cell subsets are similar in monozygotic and dizygotic twins. The distribution of early, intermediate and late differentiated T cells was heterogeneous between donors and V δ 1+ (**A**), V δ 2+ (**B**), CD4+ (**C**) and CD8+ (**D**) T cells, but there were no significant differences between the groups of monozygotic (MZ) and dizygotic twins (DZ). Blue lines indicate the mean for each group (scatter plots). Statistical evaluation was performed using the Man-Whitney-U test with Bonferroni correction for multiple comparisons: p<0.0083 was defined as statistically significant. Non significant results are not shown.

Supplementary Figure 5: Correlation of the T cell differentiation status in monozygotic co-twins.
 CD27⁺CD28⁺CD45RA⁺ V δ 1⁺ T cells (**A**) and CD27⁺CD28⁺CD45RA⁻ CD8⁺ T cells (**B**) correlated only weakly in monozygotic (MZ) co-twins. The Spearman correlation coefficient r is shown.
