

Figure S1. Time course of SO_4^{2-} uptake in erythrocytes left untreated (control) or treated with increasing concentrations (0.5 and 10 $\mu\text{g/mL}$) of freeze-dried Açai extract (pre-incubation for 1 hour), or 10 μM DIDS. ns, not statistically significant versus control; ***, $p < 0.001$ versus control, one way ANOVA followed by Bonferroni's post hoc test.
