

Supplementary Figure S1

Supplementary Figure S1. HPMEC-Im transduced with lentivirus containing sc shRNA or HDAC6 shRNA were treated with 50 ng/ml VEGF for 45 minutes. Cell lysates were partitioned for western blot analysis to determine efficiency of HDAC6 silencing (shown here) and corresponding co-immunoprecipitation studies shown in Figure 4A (**A**), Figure 4C (**B**), and Figure 4E (**C**).
