

Figure S1. Temozolomide and all 10 phytochemicals from our laboratory were assessed for their inhibitory effects on HSD11B1L-181 and parkin interactions using a yeast two-hybrid based growth assay. Log-phase cultures of diploid cells expressing BD-H2 and AD-P2 in the selective (-Leu-Trp-Ade- His) plates were spotted at different dilutions and incubated at 30 °C for 3 days.
