**Supplementary Figure S1.** Overexpression of mouse KCTD12 and mGlu1α in HEK293 cells. A: Western blot on whole-cell lysates (1μg) of untransduced and KCTD12 stably-overexpressing HEK293 cells. Native untransduced HEK293 cells show low levels of endogenous human KCTD12 expression. B: Fluorescence images of KCTD12-overexpressing HEK293 cells transiently transfected with mGlu1α. Scale bar:50 μm.
