

Supplementary figures

S1

Supplementary Figure S1. Serum and iWAT HA levels in male vs female and young vs old mice. Serum HA concentration and iWAT HA content in (A) male or female mice at the age of 20 weeks, and (B) in young (10 weeks) or old (75 weeks) male mice; $n = 4 - 6$. All data are mean \pm SEM. * $p < 0.05$, ** $p < 0.01$.
