

**A****B**

**Figure S1. CNN3 knockdown did not alter YAP1 expression levels.** C2C12 myoblasts were transfected with 200 nM of either control scRNA or siCNN3. **(A)** YAP1 and  $\beta$ -actin expression levels were assessed by immunoblotting 24 hours post-transfection. **(B)** YAP1 expression levels were normalized to  $\beta$ -actin, and relative ratios were calculated relative to the scRNA control. Data are presented as the mean  $\pm$  SEM from three independent experiments, with "ns" indicating no significant difference.
