

Figure S5. The Ck19-CreER^T and Opn-iCreER^{T2} drivers do not trigger recombination in hepatic stellate cells or immune cells after liver injury.

Immunofluorescent detection of Desmin (a) and Cd45 (b) with tdTomato on liver sections of *Ck19-CreER-tdTomato* and *Opn-CreER-tdTomato* mice three days after CCl₄ treatment. Arrow heads indicate Desmin⁺ and Cd45⁺ cells respectively. Scale bars: 50 μm.
