Supplementary Figure S1. Regorafenib significantly decreases astrocyte activation in the cortex in 5x FAD mice. (**A-J**) 3-month-old 5x FAD mice were injected with regorafenib (30 mg/kg, i.p.) or vehicle (2% DMSO + 30% PEG + 5% Tween80) daily for 2 weeks, and immunohistochemistry was performed with anti-Iba-1 or anti-GFAP antibodies. Representative images of the cortex (**A**, **F**) and hippocampus (**C**, **H**) are shown. (**B**, **D**, **E**) Quantification of data from **A** (cortex: vehicle, n=4 mice; regorafenib, n=4 mice) and **C** (CA and DG: vehicle, n=4 mice; regorafenib, n=4 mice). (**G**, **I**, **J**) Quantification of data from **F** (cortex: vehicle, n=4 mice; regorafenib, n=4 mice) and **H** (CA and DG: vehicle, n=4 mice; regorafenib, n=4 mice). Data are mean ± SEM, two-tailed Welch's adjusted t-test. **$p<0.01$.
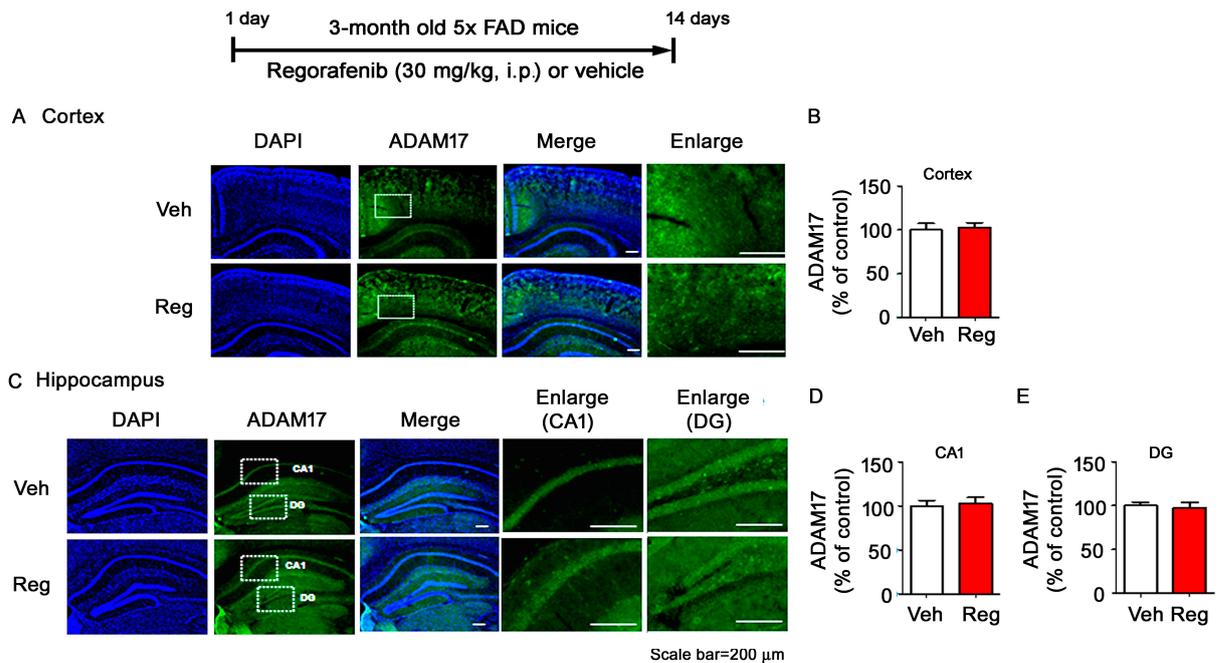

Supplementary Figure S2. Regorafenib does not alter ‑secretase ADAM17 levels in the brain in 5x FAD mice. (**A-E**) 3-month-old 5x FAD mice were injected with regorafenib (30 mg/kg, i.p.) or vehicle (2% DMSO + 30% PEG + 5% Tween80) daily for 2 weeks, and immunohistochemistry was performed with an anti-ADAM17 antibody. Representative images of the cortex (**A**) and hippocampus (**C**) are shown. (**B**, **D**, **E**) Quantification of data from **A** (cortex: vehicle, n=4 mice; regorafenib, n=4 mice) and **C** (CA and DG: vehicle, n=4 mice; regorafenib, n=4 mice). Data are mean ± SEM, two-tailed Welch's adjusted t-test.

Supplementary Figure S3. Regorafenib does not alter levels of the A   degradation enzyme NEP in the brain in 5x FAD mice. (**A-E**) 3-month-old 5x FAD mice were injected with regorafenib (30 mg/kg, i.p.) or vehicle (2% DMSO + 30% PEG + 5% Tween80) daily for 2 weeks, and immunohistochemistry was performed with an anti-NEP antibody. Representative images of the cortex (**A**) and hippocampus (**C**) are shown. (**B**, **D**, **E**) Quantification of data from **A** (cortex: vehicle, n=5 mice; regorafenib, n=5 mice) and **C** (CA and DG: vehicle, n=5 mice; regorafenib, n=5 mice). Data are mean ± SEM, two-tailed Welch's adjusted t-test.

Supplementary Figure S4. Regorafenib does not affect levels of the autophagy-related protein ATG5 in the brain in 5x FAD mice. (**A**-**E**) 3-month-old 5x FAD mice were injected with regorafenib (30 mg/kg, i.p.) or vehicle (2% DMSO + 30% PEG + 5% Tween80) daily for 2 weeks, and immunohistochemistry was performed with an anti-ATG5 antibody. Representative images of the cortex (**A**) and hippocampus (**C**) are shown. (**B**, **D**, **E**) Quantification of data from **A** (cortex: vehicle, n=4 mice; regorafenib, n=4 mice) and **C** (CA and DG: vehicle, n=4 mice; regorafenib, n=4 mice). Data are mean ± SEM, two-tailed Welch's adjusted t-test.

Supplementary Figure S5. Regorafenib does not alter phosphorylation of tau at S202, T205 and T231 in the brain in 5x FAD mice. (**A-J**) 3-month-old 5x FAD mice were injected with regorafenib (30 mg/kg, i.p.) or vehicle (2% DMSO + 30% PEG + 5% Tween80) daily for 2 weeks, and immunohistochemistry was performed with anti-AT8 or anti-AT180 antibodies. Representative images of the cortex (**A**, **F**) and hippocampus (**C**, **H**) are shown. (**B**, **D**, **E**) Quantification of data from **A** (cortex: vehicle, n=4 mice; regorafenib, n=4 mice) and **C** (CA and DG: vehicle, n=4 mice; regorafenib, n=4 mice). (**G**, **I**, **J**) Quantification of data from **F** (cortex: vehicle, n=4 mice; regorafenib, n=4 mice) and **H** (CA and DG: vehicle, n=4 mice; regorafenib, n=4 mice). Data are mean ± SEM, two-tailed Welch's adjusted t-test.

Supplementary Figure S6. Regorafenib significantly reduces Tau-5 levels in the cortex in 5x FAD mice. (**A-E**) 3-month-old 5x FAD mice were injected with regorafenib (30 mg/kg, i.p.) or vehicle (2% DMSO + 30% PEG + 5% Tween80) daily for 2 weeks, and immunohistochemistry was performed with an anti-Tau-5 antibody. Representative images of the cortex (**A**) and hippocampus (**C**) are shown. (**B**, **D**, **E**) Quantification of data from **A** (cortex: vehicle, n=3 mice; regorafenib, n=4 mice) and **C** (CA and DG: vehicle, n=3 mice; regorafenib, n=4 mice). Data are mean ± SEM, two-tailed Welch's adjusted t-test. ***$p<0.001$.
