

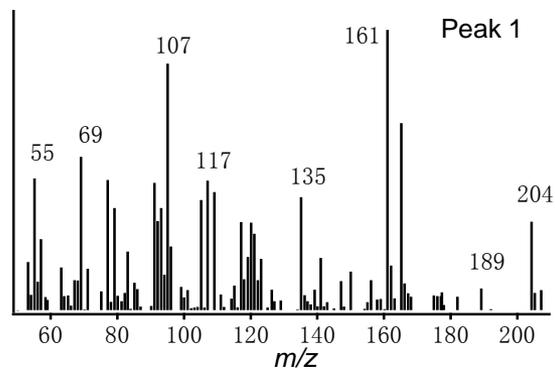

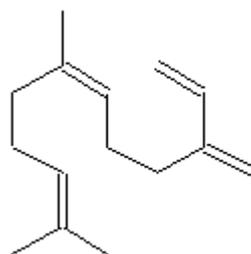

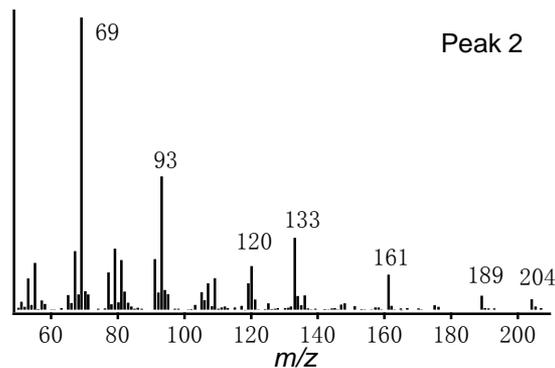

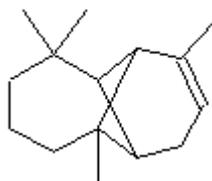

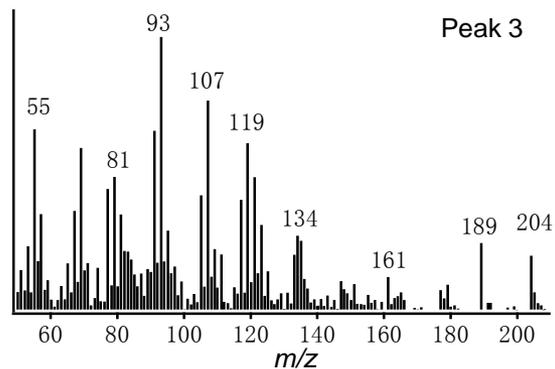

**Fig. S1** Terpene synthesis pathway in plant cells

unidentified

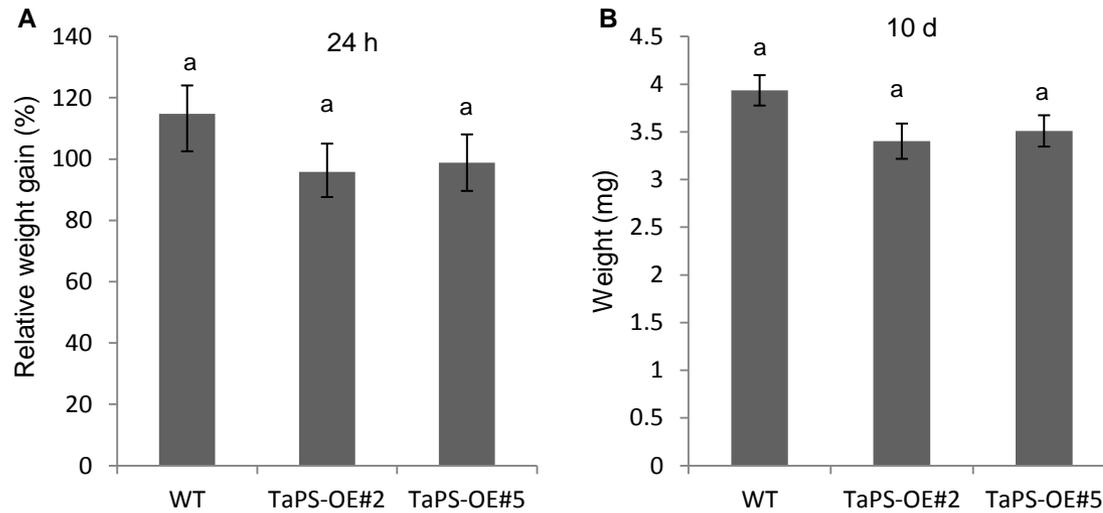

$\beta$ -farnesene

$\alpha$ -longipinene

**Fig. S2** Mass spectra of wheat sesquiterpenes. Three sesquiterpenes were detected in wheat leaves treated with alamethicin by GC-MS analysis as shown in **Fig. 2B**. Their mass spectra and putative identification were listed here.

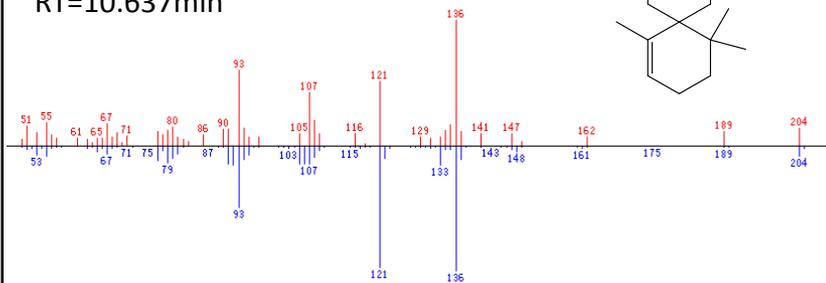

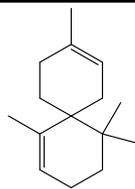

**Fig. S3** Growth inhibition assay.

Arabidopsis plants with *TaPS* overexpression were fed by beet armyworm larvae (third instar) for 24 h (**A**) or neonate larvae for 10 d (**B**). Relative weight gain or weight of larvae were determined. WT plants were used as the control. No significant growth inhibition was detected (Tukey HSD test).

**Fig. S5** Mass spectra of TaPS:I392C and C393G products.

Peak 1-10 are products generated by mutants of TaPS:I392C and C393G as shown in Fig. 5c. Their mass spectra are listed here and putative identification were conducted by MS comparison to NIST MS library.

**Table S1** Primers used in this study.

<b>Primer</b>	<b>Sequence (5'-3')</b>
TaPS-F (qRT-PCR)	GATGTTTCTCTTCTGCCGGAT
TaPS-R (qRT-PCR)	TTTCTTGATGTAGGCAATCTCGT
Wheat Actin-F (qRT-PCR)	AAGTTCCTGGTATAACGAAG
Wheat Actin-R (qRT-PCR)	AGCGGTTGTTGTGAGGGAGT
TaPS-F (RT-PCR)	ATTGTTACTACTTTCAAGATGGCGTCCG
TaPS-R (RT-PCR)	ACCTAGATGGGAATGGGGTTGACGA
Arabidopsis Actin-F (RT-PCR)	GCTGAGCGGGAAATTGTCAG
Arabidopsis Actin-R (RT-PCR)	CCACCGATCCAGACACTGTATTT
